Subject Index

- Amelogenin, octacalcium phosphate growth
 - bovine model system overview 43
 - crystal sizes and aspect ratios 43, 44, 46
 - interaction effects on growth 44–46
 - nanosphere formation in gels 46
- Amorphous calcium phosphate
 - apatite formation 140, 141
 - carbonate incorporation 135
 - composition 134, 135, 141
 - evidence in hard tissue formation 130, 131, 142–144
 - formation in biological compartments 143, 144
 - morphology 132, 133
 - octacalcium phosphate initial crystalline phase 139
 - solution behavior
 - crystalline transition pathways 136–138
 - pH dependence 138, 139
 - spontaneous formation 135, 136
 - structure analysis 131, 132
 - uniqueness 141, 142
- Apatite
 - enamel formation 18
 - epitaxial growth-structure similarities with octacalcium phosphate 56, 57
 - octacalcium phosphate transition 17, 18, 23, 70, 71, 140, 141
- Bone
 - growth factor incorporation in cements 160
 - models 69
 - octacalcium phosphate role in formation 52, 53
- Calcium orthophosphates
 - amorphous structure, *see* Amorphous calcium phosphate
 - classification 1, 2
 - crystal structures, *see* Crystal structures, calcium orthophosphates
 - solubility, *see* Solubility, calcium phosphates
- Calcium phosphate cement
 - advantages 160, 161
 - applications 155–157, 160, 161
 - classification by composition 148, 149
 - clinical studies 156
 - handling properties 153
 - hardening time 152
 - historical perspective 148
 - in vivo characteristics 155
 - mechanical strength 152, 153
 - microstructure 153–155
 - preparation
 - liquid phase 152
 - solid phase 151, 152
 - prospects
 - bone growth factor incorporation 160
 - macropore incorporation 159
 - resorption rate variation 160
 - strength augmentation 159
 - setting reactions
 - pH effects 149–151
 - rates 151
 - solubility phase diagrams 149, 150
 - solubility 155
 - stability 155
 - α -TCP + CaCO₃ cement 158

- α -TCP + CaCO₃ + MCPM cement 158
- α -TCP + DCPA + HA cement 158
- α -TCP + HA cement 157
- α -TCP + β -TCP + HA cement 157
- β -TCP + MCPM cement 158, 159
- TTCP + DCPA cement clinical studies 156, 157
- Carbonate
 - amorphous calcium phosphate incorporation 135
 - octacalcium phosphate formation effects 28, 29, 64, 65
- Chlorapatite, crystal structure 4
- Collagen matrix, octacalcium phosphate growth
 - calcium and phosphate concentration effects 39, 41
 - crystal orientations 41–43, 67
 - electron microscopy of crystals 39, 41, 42
 - inside disk growth 41
 - overview 38, 39
 - x-ray diffraction of crystals 41, 42
- Crystal structures, calcium orthophosphates
 - apatites
 - chlorapatite 4
 - fluorapatite 2, 3
 - hydroxyapatite 3, 4
 - octacalcium phosphate
 - hydroxyapatite comparison 7–10
 - overview of structure 5–7, 84
 - substituted apatites 4, 5
 - tetracalcium phosphate 10
 - calcium phosphate sheet-containing compounds
 - dicalcium phosphate anhydrous 13
 - dicalcium phosphate dihydrate 13
 - monocalcium phosphate monohydrate 14
 - glacerite-type structures
 - apatite structure relationships 12, 13
 - magnesium incorporation effects 12
 - overview 10, 11
 - α -tricalcium phosphate 11
 - β -tricalcium phosphate 11, 12
- Dicalcium phosphate
 - cements, *see* Calcium phosphate cement
- crystal structure
 - anhydrous 13
 - dihydrate 13
- Enamel
 - apatite formation 18
 - microbe adsorption 122, 124
 - models for formation 69, 70
 - protein adsorption 121, 122
- Fluoride
 - adsorption and exchange 119, 120
 - interfacial bonding effects 124
 - octacalcium phosphate formation effects 28–30, 33, 34, 65, 66
- Fluoroapatite
 - crystal structure 2, 3
 - interfacial behavior, *see* Interfacial behavior, calcium phosphates
 - solubility 106
- Formation, octacalcium phosphate
 - crystal growth systems, *see* Amelogenin, octacalcium phosphate growth; Collagen matrix, octacalcium phosphate growth; Membrane system, octacalcium phosphate growth; Polyacrylamide gel, octacalcium phosphate growth; Solution systems, octacalcium phosphate growth
 - physiological conditions in formation
 - electrolyte effects
 - carbonate 64, 65
 - fluoride 65, 66
 - magnesium 64–66
 - pyrophosphate 63, 64
 - zinc 66, 67
 - mechanisms 61, 62
 - protein effects 67, 68
 - supersaturation levels of biological fluids 62, 63
