

# Subject Index

- ACAN, genetic testing of short stature 10  
AFRIBIOTA project 179, 180  
ALIMUDE study 100, 101, 103  
Allergy  
    prebiotics and prevention 46, 47  
    vitamin D status in pregnancy and  
        childhood adiposity and allergy 20, 21  
ALSPAC cohort 79, 80, 125, 135  
Aromatase, leptin stimulation in growth  
    plate 8  
Aspartame, long-term cardiometabolic  
    effects 38, 39  
Asthma, infant feeding mode and risks 56, 57  
Atherosclerosis, human immunodeficiency  
    virus-infected children and  
    adolescents 114–116  
Azithromycin, ELICIT protocol 178, 179  
  
Baby-Led Introduction to Solids (BLISS) 26,  
    27, 53, 54  
Biliary atresia, *see* Chronic liver disease  
BLISS, *see* Baby-Led Introduction to Solids  
Blood pressure  
    exclusive breastfeeding effect in  
        adolescents 27, 28  
    fast food study in China 31, 32  
Body mass index, *see* Obesity  
BONUS study 103  
BPD, *see* Bronchopulmonary dysplasia  
Breakfast, obesity impact in children 30, 31  
Breastfeeding  
    asthma risk study 56, 57  
    body composition and growth studies  
        exclusive breastfeeding effects  
            adolescents 27, 28  
            infants 58, 59  
    FTO gene variants 125  
    infants 22, 123, 124  
    young adults 23, 24  
excessive weight gain in breast-fed  
    infants 126  
hormone influences on infant growth and  
    body composition 24, 25  
obesity impact on mother-child pairs 122,  
    123  
Bronchopulmonary dysplasia (BPD), early  
    energy and protein intakes in preterm  
    infants 64, 65  
  
Catch-up growth  
    leptin stimulation of aromatase in growth  
        plate 8  
    very preterm infants 7, 8  
    zinc supplementation during first two  
        years 6  
CeD, *see* Celiac disease  
Celiac disease (CeD)  
    fracture risk 104, 105  
    online consultation for follow-up  
        106, 107  
CF, *see* Cystic fibrosis  
Cholangitis, *see* Chronic liver disease  
Chronic liver disease (CLD)  
    biliary atresia Kasai portoenterostomy,  
        preoperative nutrition and cholangitis  
        outcomes 109, 110  
    body composition impact on growth in  
        infants and toddlers 108, 109  
    infant growth status and living-donor liver  
        transplantation outcomes 110–112  
CLD, *see* Chronic liver disease  
Cognition, *see also* Docosahexaenoic acid  
    early nutrition counseling impact in  
        adolescence 88, 89

- fatty acid fortified milk study in school-aged children 83
- fatty acid metabolism enzyme single nucleotide polymorphisms and cognitive outcomes 77
- Flynn Effect 88
- gut microbiota studies of cognitive development 84, 85
- maternal studies of offspring impact
  - folic acid 82
  - iodine status 78, 79
  - iron deficiency and maternal obesity 81
  - prenatal mercury exposure and fish in diet 80
  - vitamin D status 79, 80
  - obesity effects in children 86, 87
- Colic, *Lactobacillus reuteri* for treatment 49–51
- Colostrum, maternal diet effects on fatty acid composition 76
- Complementary feeding
  - Baby-Led Introduction to Solids 26, 27, 53, 54
  - cowpea feeding and growth in Malawian children 129–131
  - fish protein isolate and growth in Peruvian children 128, 129
  - growth and obesity outcomes 29, 30
  - meat versus dairy diet and growth in formula-fed infants 127, 128
- Cow milk
  - intake and height outcome over 17 years 6, 7
  - maternal milk intake and birth weight 163, 164
- Cowpea, complementary feeding and growth in Malawian children 129–131
- Crohn's disease, *see* Inflammatory bowel disease
- Cystic fibrosis (CF)
  - energy intake and growth 102, 103
  - nutritional status in first two years 100, 101
- Dairy
  - breakfast consumption and obesity impact in children 30, 31
  - consumption and nutritional status in SEANUTS surveys 180, 181
- DDT, prenatal exposure and maternal polyunsaturated fatty acid intake benefits 75
- DHA, *see* Docosahexaenoic acid
- Diabetes
  - gestational diabetes, refined grains, and growth of offspring 18, 19
  - hydrolyzed infant formula versus conventional formula in type 1 disease risks 54, 55
- Docosahexaenoic acid (DHA)
  - fish oil parenteral nutrition in preterm infants 60, 61
  - fortified milk study of cognition in school-aged children 83
  - maternal DHA:arachidonic acid ratio and cognitive outcomes at 7 years 73, 74
  - prenatal DDT effect amelioration 75
  - supplementation studies of reading, working memory, and behavior in 7–9 year-olds 74
- DOLAB II study 74
- EDEN-France cohort 135, 136
