Y

our opponents would love you to believe that it’s hopeless, that you have no power, that there’s no reason to act, that you can’t win. Hope is a gift you don’t have to surrender, a power you don’t have to throw away. And though hope can be an act of defiance, defiance isn’t enough reason to hope. But there are good reasons.

I wrote this book in 2003 and early 2004 to make the case for hope. The text that follows is in some ways of its moment — it was written against the tremendous despair at the height of the Bush administration’s powers and the outset of the war in Iraq. That moment passed long ago, but despair, defeatism, cynicism, and the amnesia and assumptions from which they often arise have not dispersed, even as the most wildly, unimaginably magnificent things came to pass. There is a lot of evidence for the defense.

Coming back to the text more than a dozen tumultuous
The Uses of Uncertainty

Hope in the Dark began as an essay that I published online about six weeks after the United States launched its war on Iraq. It immediately went, as they say, viral—it was widely circulated by email, picked up by a mainstream newspaper and many news websites, pirated by some alternative newspapers, even printed out and distributed by hand by someone who liked it. It was my first adventure in online publishing, as well as in speaking directly to the inner life of the politics of the moment, to the emotions and perceptions that underlie our political positions and engagements. Amazed by the ravenous appetite for another way of telling who and where we were, I decided to write this slender book. It has had an interesting life in several languages, and it’s a pleasure to revise it with this introduction and a few new chapters at the end, notes, and handsome redesign. Updating the book would have meant writing an entirely new book, so we chose to reissue the 2005 second edition with this additional material instead.

After the book was published, I spent years on the road talking about hope and activism, the historical record and the possibilities, and my arguments grew, perhaps, more polished or more precise or at least more case-hardened. Here’s another traverse across that landscape.

“Your opponents would love you to believe that it’s hopeless, that you have no power.”

It’s important to say what hope is not: it is not the belief that everything was, is, or will be fine. The evidence is all around us of tremendous suffering and tremendous destruction. The hope I’m interested in is about broad perspectives with specific possibilities, ones that invite or demand that we act. It’s also not a sunny everything-is-getting-better narrative, though it may be a counter to the everything-is-getting-worse narrative. You could call it an account of complexities and uncertainties, with openings. “Critical thinking without hope is cynicism, but hope without critical thinking is naïvete,” the Bulgarian writer Maria Popova recently remarked. And Patrisse Cullors, one of the founders of Black Lives Matter, early on described the movement’s mission as to “Provide hope and inspiration for collective action to build collective power to achieve collective transformation, rooted in grief and rage but pointed towards vision and dreams.” It’s a statement that acknowledges that grief and hope can coexist.

years later, I believe its premises hold up. Progressive, populist, and grassroots constituencies have had many victories. Popular power has continued to be a profound force for change. And the changes we’ve undergone, both wonderful and terrible, are astonishing. The world of 2003 has been swept away. Its damage lingers, but its arrangements and many of its ideologies have given way to new ones—and, more than that, to a sea change in who we are and how we imagine ourselves, the world, and so many things in it. This is an extraordinary time full of vital, transformative movements that could not be foreseen. It’s also a nightmarish time. Full engagement requires the ability to perceive both. The twenty-first century has seen the rise of hideous economic inequality, perhaps due to amnesia both of the working people who countenance declines in wages, working conditions, and social services, and the elites who forgot that they conceded to some of these things in the hope of avoiding revolution. The rise of Silicon Valley as a global power center has eliminated and automated countless jobs, enhancing economic inequality; it has produced new elites and monstrous corporations from Amazon, with its attack on publishing, authors, and working conditions, to Google, which is attempting to build a global information monopoly in myriad arenas and in the process amassing terrifying powers, including the power that comes with sophisticated profiles of most computer users. The major tech companies have created and deployed surveillance capacities that the Kremlin and FBI at the height of the Cold War could not have dreamed of—in cooperation with the government that should be regulating them. The attack on civil liberties, including the right to privacy, continues long after its Global War on Terror justifications have faded away.

Worse than these is the arrival of climate change, faster, harder, and more devastating than scientists anticipated.

Hope doesn’t mean denying these realities. It means facing them and addressing them by remembering what else the twenty-first century has brought, including the movements, heroes, and shifts in consciousness that address these things now. Among them: Occupy Wall Street; Black Lives Matter; Idle No More; the Dreamers addressing the Dream Act and immigration rights; Edward Snowden, Laura Poitras, Glenn Greenwald, and the movement for corporate and government transparency; the push for marriage equality; a resurgent feminist movement; economic justice movements addressing (and in many cases raising) minimum wage and fighting debt peonage and the student-loan racket; and a dynamic climate and climate justice movement—and the intersections between them all. This has been a truly remarkable decade for movement-building, social change, and deep, profound shifts in ideas, perspective, and frameworks for broad parts of the population (and, of course, infections against all those things).
There’s another lineage for the Arab Spring in hip-hop, discord and outrage; Tunisian hip-hop artist El Général was, along with Bouazizi, an instigator of the uprising, and other musicians played roles in articulating the outrage and inspiring the crowds. 

Mushroomed: after a rain mushrooms appear on the surface of the earth as if from nowhere. Many do so from a sometimes vast underground fungus that remains invisible and largely unknown. What we call mushrooms mycologists call the fruiting body of the larger, less visible fungus. Uprisings and revolutions are often considered to be spontaneous, but less visible long-term organizing and groundwork — or underground work — often laid the foundation. Changes in ideas and values also result from work done by writers, scholars, public intellectuals, social activists, and participants in social media. It seems insignificant or peripheral until very different outcomes emerge from transformed assumptions about who and what matters, who should be heard and believed, who has rights.

Ideas at first considered outrageous or ridiculous or extreme gradually become what people think they’ve always believed. How the transformation happened is rarely remembered, in part because it’s compromising: it recalls the mainstream when the mainstream was, say, rabidly homophobic or racist in a way it no longer is; and it recalls that power comes from the shadows and the margins, that our hope is in the dark around the edges, not the limelight of center stage. Our hope and often our power.

The Stories We Tell

Changing the story isn’t enough in itself, but it has often been foundational to real changes. Making an injury visible and public is often the first step in remedying it, and political change often follows culture, as what was long tolerated is seen to be intolerable, or what was overlooked becomes obvious. Which means that every conflict is in part a battle over the story we tell, or who tells and who is heard.

A victory doesn’t mean that everything is now going to be nice forever and we can therefore all go lounge around until the end of time. Some activists are afraid that if we acknowledge victory, people will give up the struggle. I’ve long been more afraid that people will give up and go home or never get started in the first place if they think no victory is possible or fail to recognize the victories already achieved. Marriage equality is not the end of homophobia, but it’s something to celebrate. A victory is a milestone on the road, evidence that sometimes we win, and encouragement to keep going, not to stop. Or it should be.

My own inquiry into the grounds for hope has received two great reinforcements since I wrote _Hope in the Dark_. One came from the recognition of how powerful are the altruistic, idealistic forces already at work in the world. Most of us would say, if asked, that we live in a capitalist society, but vast
amounts of how we live our everyday lives — our interactions with and commitments to family lives, friendships, avocations, membership in social, spiritual, and political organizations — are in essence noncapitalist or even anticapitalist, full of things we do for free, out of love, and on principle.

In a way, capitalism is an ongoing disaster anticapitalism alleviates, like a mother cleaning up after her child’s messes (or, to extend the analogy, sometimes disciplining that child to clean up after itself, through legislation or protest, or preventing some of the messes in the first place, and it might be worth adding that noncapitalist ways of doing things are much older than free-market economic arrangements). Activists often speak as though the solutions we need have not yet been launched or invented, as though we are starting from scratch, when often the real goal is to amplify the power and reach of existing alternatives. What we dream of is already present in the world.

This is an extraordinary time full of vital, transformative movements that could not be foreseen. It’s also a nightmarish time.

The second reinforcement came out of my investigation of how human beings respond to major urban disasters, from the devastating earthquakes in San Francisco (in 1906) and Mexico City (in 1985) to the Blitz in London to Hurricane Katrina in New Orleans. The assumption behind much disaster response by the authorities — and the logic of bombing civilians — is that civilization is a brittle façade, and behind it lies our true nature as monstrous, selfish, chaotic, and violent or as timid, fragile, and helpless. In fact, in most disasters most people are calm, resourceful, altruistic, and creative. And civilian bombing campaigns generally fail to break the will of the people, making them a waste as well as a crime against humanity.

What startled me about the response to disaster was not the virtue, since virtue is often the result of diligence and dutifulness, but the passionate joy that shined out from accounts by people who had barely survived. These people who had lost everything, who were living in rubble or ruins, had found agency, meaning, community, immediacy in their work together with other survivors. The century of testimony I drew from for my 2009 book A Paradise Built in Hell suggested how much we want lives of meaningful engagement, of membership in civil society, and how much societal effort goes into withering us away from these fullest, most powerful selves. But people return to those selves, those ways of self-organizing, as if by instinct when the situation demands it. Thus a disaster is a lot like a revolution when it comes to disruption and improvisation, to new roles and an unnerving or exhilarating sense that now anything is possible.

This was a revolutionary vision of human nature and a revelation that we can pursue our ideals not out of diligence but because when they are realized there’s joy, and joy is itself an insurrectionary force against the dreariness and dullness and isolation of everyday life. My own research was, I realized by its end, a small part of an enormous project going on among many disciplines — psychology, economics, neuroscience, sociology, anthropology, political science — to redefine human nature as something more communal, cooperative, and compassionate. This rescue of our reputations from the social darwinists and the Hobbesians is important, not to feel positive about ourselves but to recognize the radical possibilities that can be built on an alternative view of human nature.

The fruits of these inquiries made me more hopeful. But it’s important to emphasize that hope is only a beginning; it’s not a substitute for action, only a basis for it. “Not everything that is faced can be changed, but nothing can be changed until it is faced,” said James Baldwin. Hope gets you there; work gets you through. “The future belongs to those who prepare for it today,” said Malcolm X. And there is a long history of that work, the work to change the world, a long history of methods, heroes, visionaries, heroines, victories — and, of course, failures. But the victories matter, and remembering them matters too. “We must accept finite disappointment, but never lose infinite hope,” said Martin Luther King Jr.

The Branches Are Hope; the Roots Are Memory

“Memory produces hope in the same way that amnesia produces despair,” the theologian Walter Brueggeman noted. It’s an extraordinary statement, one that reminds us that though hope is about the future, grounds for hope lie in the records and recollections of the past. We can tell of a past that was nothing but defeats and cruelties and injustices, or of a past that was some lovely golden age now irretrievably lost, or we can tell a more complicated and accurate story, one that has room for the best and worst, for atrocities and liberations, for grief and jubilation. A memory commensurate to the complexity of the past and the whole cast of participants, a memory that includes our power, produces that forward-directed energy called hope.

Amnesia leads to despair in many ways. The status quo would like you to believe it is immutable, inevitable, and invulnerable, and lack of memory of a dynamically changing world reinforces this view. In other words, when you don’t know how much things have changed, you don’t see that they are changing or that they can change. Those who think that
way don't remember raids on gay bars when being queer was illegal or rivers that caught fire when unregulated pollution peaked in the 1960s or that there were, worldwide, 70 percent more seabirds a few decades ago and, before the economic shifts of the Reagan Revolution, very, very few homeless people in the United States. Thus, they don't recognize the forces of change at work.

One of the essential aspects of depression is the sense that you will always be mired in this misery, that nothing can or will change. It's what makes suicide so seductive as the only visible exit from the prison of the present. There's a public equivalent to private depression, a sense that the nation or the society rather than the individual is stuck. Things don't always change for the better, but they change, and we can play a role in that change if we act. Which is where hope comes in, and memory, the collective memory we call history.

The other affliction amnesia brings is a lack of examples of positive change, of popular power, evidence that we can do it and have done it. George Orwell wrote, “Who controls the past controls the future. Who controls the present controls the past.” Controlling the past begins by knowing it; the stories we tell about who we were and what we did shape what we can and will do. Despair is also often premature: it's a form of impatience as well as of certainty.

My favorite comment about political change comes from Zhou Enlai, a high-ranking member of Chairman Mao's government. Asked, in the early 1970s, about his opinion of the French Revolution, he answered, “Too soon to tell.” Some argue that he was talking about the insurrections of 1789, but even then it demonstrates a generous and expansive perspective. To retain a sense that even four years later the verdict isn’t in is to live with more open-minded uncertainty than most people now can tolerate.

News cycles tend to suggest that change happens in small, sudden bursts or not at all. As I write, the military men who probably murdered Chilean singer and political activist Victor Jara in 1973 are being charged. More than forty years have gone by; some stories take far longer than that to finish. The struggle to get women the vote took nearly three-quarters of a century. For a time people liked to announce that feminism had failed, as though the project of overturning millennia of social arrangements should achieve its final victories in a few decades, or as though it had stopped. Feminism is just starting, and its manifestations matter in rural Himalayan villages, not just first-world cities. Susan Griffin, a great writer in the present who was also an important part of 1970s feminism, recently remarked, “I’ve seen enough change in my lifetime to know that despair is not only self-defeating, it is unrealistic.”

Other changes result in victories and are then forgotten. For decades, radicals were preoccupied with East Timor, brutally occupied by Indonesia from 1975 to 2002; the liberated country is no longer news. It won its liberty because of valiant struggle from within, but also because of dedicated groups on the outside who pressured and shamed the governments supporting the Indonesian regime. We could learn quite a lot from the remarkable display of power and solidarity and East Timor’s eventual victory, but the whole struggle seems forgotten.

For decades, Peabody Western Coal Corporation mined coal on the Hopi/Navajo land at Black Mesa in ways that contaminated the air and drained vast amounts of water from the region. The fight against Black Mesa was a totemic struggle for indigenous sovereignty and environmental justice; in 2005, the mines were shut down, and the issue disappeared from the conversation. It was also a case of tenacious activism from within and good allies from without, prolonged lawsuits, and perseverance.

We need litanies or recitations or monuments to these victories, so that they are landmarks in everyone’s mind. More broadly, shifts in, say, the status of women are easily overlooked by people who don’t remember that, a few decades ago, reproductive rights were not yet a concept, and there was no recourse for exclusion, discrimination, workplace sexual harassment, most forms of rape, and other crimes against women the legal system did not recognize or even countenanced. None of the changes were inevitable, either — people fought for them and won them.

People adjust without assessing the changes. As of 2014, Iowa gets 28 percent of its electricity from wind alone, not because someone in that conservative state declared death to all fossil fuel corporations or overthrew anyone or anything, but because it was a sensible and affordable option. Denmark, in the summer of 2015, achieved 140 percent of its electricity needs through wind generation (and sold the surplus to neighboring countries). Scotland has achieved renewable energy generation of 50 percent and set a goal of 100 percent by 2020. Thirty percent more solar was installed in 2014 than the year before in the United States, and renewables are becoming more affordable worldwide — in some places they are already cheaper than fossil-fueled energy. These incremental changes have happened quietly, and many people don’t know they have begun, let alone exploded.

If there is one thing we can draw from where we are now and where we were then, it is that the unimaginable is ordinary, that the way forward is almost never a straight line you can glance down but a convoluted path of surprises, gifts, and afflictions you prepare for by accepting your blind spots as well as your intuitions. Howard Zinn wrote in 1988, in what now seems like a lost world before so many political upheavals and technological changes arrived, “As this century draws to a close, a century packed with history, what leaps out from that history is its utter unpredictability.” He was, back then, wondering at the distance we’d traveled from when the Democratic National Party Convention refused
to seat Blacks from Mississippi to when Jesse Jackson ran (a largely symbolic campaign) for president at a time most people thought they would never live to see a Black family occupy the White House. In that essay, “The Optimism of Uncertainty,” Zinn continues,

The struggle for justice should never be abandoned because of the apparent overwhelming power of those who have the guns and the money and who seem invisible in their determination to hold onto it. That apparent power has, again and again, proved vulnerable to moral fervor, determination, unity, organization, sacrifice, wit, ingenuity, courage, patience — whether by blacks in Alabama and South Africa, peasants in El Salvador, Nicaragua, and Vietnam, or workers and intellectuals in Poland, Hungary, and the Soviet Union itself.

People Have the Power

Social, cultural, or political change does not work in predictable ways or on predictable schedules. The month before the Berlin Wall fell, almost no one anticipated that the Soviet Bloc was going to disintegrate all of a sudden (thanks to many factors, including the tremendous power of civil society, nonviolent direct action, and hopeful organizing going back to the 1970s), any more than anyone, even the participants, foresaw the impact that the Arab Spring or Occupy Wall Street or a host of other great uprisings would have. We don’t know what is going to happen, or how, or when, and that very uncertainty is the space of hope.

Those who doubt that these moments matter should note how terrified the authorities and elites are when they erupt. That fear signifies their recognition that popular power is real enough to overturn regimes and rewrite the social contract. And it often has. Sometimes your enemies know what your friends can’t believe. Those who dismiss these moments because of their imperfections, limitations, or incompleteness need to look harder at what joy and hope shine out of them and what real changes have emerged because of them, even if not always in the most obvious or recognizable ways.

And everything is flawed, if you want to look at it that way. The analogy that has helped me most is this: in Hurricane Katrina, hundreds of boatowners rescued people — single moms, toddlers, grandfathers — stranded in attics, on roofs, in flooded housing projects, hospitals, and school buildings. None of them said, I can’t rescue everyone, therefore it’s futile; therefore my efforts are flawed and worthless, though that’s often what people say about more abstract issues in which, nevertheless, lives, places, cultures, species, rights are at stake. They went out there in fishing boats and rowboats and piroques and all kinds of small craft, some driving from as far as Texas and eluding the authorities to get in, others refugees themselves working within the city. There was bumper-to-bumper boat-trailer traffic — the celebrated Cajun Navy — going toward the city the day after the levees broke. None of those people said, I can’t rescue them all. All of them said, I can rescue someone, and that’s work so meaningful and important I will risk my life and defy the authorities to do it. And they did. Of course, working for systemic change also matters — the kind of change that might prevent calamities by addressing the climate or the infrastructure or the environmental and economic injustice that put some people in harm’s way in New Orleans in the first place.

Change is rarely straightforward, and that is one of the central premises of this book. Sometimes it’s as complex as chaos theory and as slow as evolution. Even things that seem to happen suddenly arise from deep roots in the past or from long-dormant seeds. A young man’s suicide triggers an uprising that inspires other uprisings, but the incident was a spark; the bonfire it lit was laid by activist networks and ideas about civil disobedience and by the deep desire for justice and freedom that exists everywhere.

It’s important to ask not only what those moments produced in the long run but what they were in their heyday. If people find themselves living in a world in which some hopes are realized and some joys are incandescent and some boundaries between individuals and groups are lowered, even for an hour or a day or several months, that matters. Memory of joy and liberation can become a navigational tool, an identity, a gift.

Paul Goodman famously wrote, “Suppose you had the revolution you are talking and dreaming about. Suppose your side had won, and you had the kind of society that you wanted. How would you live, you personally, in that society? Start living that way now!” It’s an argument for tiny and temporary victories, and for the possibility of partial victories in the absence or even the impossibility of total victories. Total victory has always seemed like a secular equivalent of paradise: a place where all the problems are solved and there’s nothing to do, a fairly boring place. The absolutists of the old left imagined that victory would, when it came, be total and permanent, which is practically the same as saying that victory was and is impossible and will never come. It is, in fact, more than possible. It is something that has arrived in innumerable ways, small and large and often incremental, but not in that way that was widely described and expected. So victories slip by unheralded. Failures are more readily detected.

The global movement to address climate change is also, at last, far larger and more powerful than we could have dreamed.
And then every now and then, the possibilities explode. In these moments of rupture, people find themselves members of a "we" that did not until then exist, at least not as an entity with agency and identity and potency; new possibilities suddenly emerge, or that old dream of a just society reemerges and — at least for a little while — shines. Utopia is sometimes the goal. It’s often embedded in the moment itself, and it’s a hard moment to explain, since it usually involves hardscrabble ways of living, squabbles, and eventually disillusion and factionalism — but also more ethereal things: the discovery of personal and collective power, the realization of dreams, the birth of bigger dreams, a sense of connection that is as emotional as it is political, and lives that change and do not revert to older ways even when the glory subsides.

Sometimes the earth closes over this moment and it has no obvious consequences; sometimes empires crumble and ideologies fall away like shackles. But you don’t know beforehand. People in official institutions devoutly believe they hold the power that matters, though the power we grant them can often be taken back; the violence commanded by governments and militaries often fails, and nonviolent direct-action campaigns often succeed.

The sleeping giant is one name for the public; when it wakes up, when we wake up, we are no longer only the public: we are civil society, the superpower whose nonviolent means are sometimes, for a shining moment, more powerful than violence, more powerful than regimes and armies. We write history with our feet and with our presence and our collective voice and vision. And yet, and of course, everything in the mainstream media suggests that popular resistance is ridiculous, pointless, or criminal, unless it is far away, was long ago, or, ideally, both. These are the forces that prefer the giant remain asleep.

Together we are very powerful, and we have a seldom-told, seldom-remembered history of victories and transformations that can give us confidence that yes, we can change the world because we have many times before. You row forward looking back, and telling this history is part of helping people navigate toward the future. We need a litany, a rosary, a sutra, a mantra, a war chant of our victories. The past is set in daylight, and it can become a torch we can carry into the night that is the future.
