Foreword

The Symposium on Fatigue Crack Growth Under Spectrum Loads was held on 23-24 June 1975 at the Seventy-eighth Annual Meeting of the American Society for Testing and Materials in Montreal, Quebec, Canada. Committee E-24 on Fracture Testing of Metals and Committee E-9 on Fatigue sponsored the symposium. R. P. Wei, Lehigh University, and R. I. Stephens, The University of Iowa, served as the symposium cochairmen. Serving as members of the Symposium Organizing/Program Committee and as session chairmen were J. M. Barsom, U. S. Steel Corp.; W. G. Clark, Jr., Westinghouse R & D Center; N. E. Dowling, Westinghouse R & D Center; C. M. Hudson, NASA Langley Research Center; E. K. Walker, Lockheed California Co.; and Howard Wood, AFFDL/FBR, Wright-Patterson AFB.

A Note of Appreciation to Reviewers

This publication is made possible by the authors and, also, the unheralded efforts of the reviewers. This body of technical experts whose dedication, sacrifice of time and effort, and collective wisdom in reviewing the papers must be acknowledged. The quality level of ASTM publications is a direct function of their respected opinions. On behalf of ASTM we acknowledge with appreciation their contribution.

Contents

Introduction	1
Observations on the Prediction of Fatigue Crack Growth Propagation Under Variable-Amplitude Loading—J. SCHLIVE	3
Loads in Service	4
Differences Between Crack Growth Studies	6
Definition and Measurement of Interaction Effects	8
Interaction Effects in Tests with Overloads or Step Loading	10
Interaction Effects in Tests with Program Loading, Random Loading, or Flight-Simulation Loading	13
Prediction Methods for Variable-Amplitude Loading	16
Conclusions	19
 SIMPLE SPECTRA: EFFECT OF LOADING VARIABLES	
Fatigue Crack Growth with Negative Stress Ratio Following Single Overloads in 2024-T3 and 7075-T6 Aluminum Alloys—R. I. STEPHENS, D. K. CHEN, AND B. W. HOM	27
Material and Experimental Procedures	28
Test Results	29
Discussion of Results	36
Summary and Conclusions	37
Effect of Single Overload/Underload Cycles on Fatigue Crack Propagation—W. X. ALZOS, A. C. SKAT, JR., AND B. M. HILLBERRY	41
Test Program	42
Experimental Procedure	43
Data Reduction—Numerical Differentiation	45
Test Results	49
Comparison with Crack Closure	53
Conclusions	56
Discussion	58

Effects of Rest Time on Fatigue Crack Retardation and Observations of Crack Closure—W. N. SHARPE, JR., D. M. CORBLY, AND A. F. GRANDT, JR.	61
Retardation Measurements	62
Surface Measurement of Opening Loads	66
Ultrasonic Measurements	69
Conclusions	73
Discussion	75
Mechanisms of Overload Retardation During Fatigue Crack Propagation—P. J. BERNARD, T. C. LINDLEY, AND C. E. RICHARDS	78
Types of Single Overload Effect	80
Experimental	81
Results	82
Discussion	91
Conclusions	95
Discussion	96
 SIMPLE SPECTRA: ENVIRONMENTAL EFFECTS AND MODELING 	
Spike Overload and Humidity Effects on Fatigue Crack Delay in Al 7075-T651—OTTO BUCK, J. D. FRANSEN, AND H. L. MARCUS	101
Experimental Procedures	102
Results	102
Discussion	106
Conclusions	111
Influences of Chemical and Thermal Environments on Delay in a Ti-6Al-4V Alloy—T. T. SHIH AND R. P. WEI	113
Material and Experimental Work	115
Results and Discussions	116
Summary	123
Discussion	124
Effect of Various Programmed Overloads on the Threshold for High-Frequency Fatigue Crack Growth—S. W. HOPKINS, C. A. RAU, G. R. LEVERANT, AND A. YUEN	125
Experimental Procedure	126
Experimental Results and Discussion	129
Metallography and Fractography	135
General Discussion	137
Conclusions	139
Discussion	140

A Model for Fatigue Crack Growth Delay Under Two-Level Block Loads—	
O. A. ADETIFA, C. V. B. GOWDA, AND T. H. TOPPER	142
Previous Quantitative Models	143
Composite Stress Intensity Parameter	144
Crack Arrest Condition	151
Discussion	151
Summary and Conclusions	153
Discussion	155
Mathematical Modeling of Crack Growth Interaction Effects—	
P. D. BELL AND A. WOLFMAN	157
Results and Discussion	158
Concluding Remarks	170
Discussion	171
Experimental Results and a Hypothesis for Fatigue Crack Propagation Under Variable-Amplitude Loading—	
G. H. JACOBY, H. NOWACK, AND H. T. M. VAN LIPZIG	172
Experimental Crack Propagation Behavior and Discussion	174
Conclusions	182
COMPLEX SPECTRA: LOAD DEFINITION, MODELING, AND SERVICE SIMULATION	
Effect of Spectrum Type on Fatigue Crack Growth Life—	
J. A. REIMAN, M. A. LANDY, AND M. P. KAPLAN	187
Mission Profile Definition	188
Spectrum Development	189
Analytical Model Verification	192
Results and Discussion	193
Conclusions	200
Stress Spectrums for Short-Span Steel Bridges—	
K. H. KLIPPSTEIN AND C. G. SCHILLING	203
Field Measurements	204
Control Tapes for Fatigue Tests	211
Conclusions	215
Fatigue Crack Growth Under Variable-Amplitude Loading in Various Bridge Steels—	
J. M. BARSOM	217
Materials and Experimental Work	218
Results and Discussion	222
Summary	226
Discussion	233

Equivalent Constant-Amplitude Concept for Crack Growth Under Spectrum Loading—WOLF ELBER	236
Analysis	237
Testing	240
Results and Discussion	243
Concluding Remarks	247
Discussion	247
Crack Growth in Ti-8Al-1Mo-1V with Real-Time and Accelerated Flight-by-Flight Loading—L. A. IMIG	251
Experimental Considerations	252
Crack-Growth Analysis	255
Results and Discussion	259
Concluding Remarks	263
LIFE PREDICTION AND APPLICATIONS	
Prediction of Fatigue Crack Growth Under Irregular Loading—D. V. NELSON AND H. O. FUCHS	267
Input Data for Predictions	268
Crack Growth Rate Relations	271
Prediction of Crack Growth for Irregular Loadings	273
Comparison of Predictions with Test Results for Irregular Loadings	278
Discussion	283
Conclusions	284
Discussion	287
Structural Reliability Prediction Method Considering Crack Growth and Residual Strength—S. R. VARANASI AND I. C. WHITTAKER	292
Analytical Development	293
Crack Growth Model	293
Residual Strength Model	297
Structural Reliability Model	298
Results	298
Conclusions	304
Spectrum Crack Growth Prediction Method Based on Crack Surface Displacement and Contact Analyses—H. D. DILL AND C. R. SAFF	306
Crack Surface Displacement Analyses	307
Contact Stress Analyses	309
Constant-Amplitude Crack Growth	313
Crack Growth Following High Loads	313
Blocked Spectrum Crack Growth	315

Conclusions	315
Discussion	317
Spectrum Fatigue Crack Growth in Lugs—L. F. IMPELLIZZERI AND D. L. RICH	320
Test Program	321
