The deadline for advertising insertion orders is the 15th, two months prior to date of issue. Orders received after deadline are subject to space availability. Deadline for copy and/or plate is the 1st day of month, one month prior to date of issue. For advertising information contact: Evelyn Mazur, American Meteorological Society, 45 Beacon Street, Boston, Mass. 02108. Tel. 617-227-2425.

employment announcements

The American Meteorological Society issues employment announcements monthly, setting forth opportunities for positions in the atmospheric and oceanographic fields. The employers describe the prerequisites and requirements for the openings.

Members and nonmembers of the AMS may subscribe to the announcements. The subscription price for twelve monthly issues is \$3 per annum for AMS members and \$12 per annum for non-members (AMS student members free).

The purpose of the Employment Bulletin is to provide a means by which those seeking positions in the atmospheric and related fields and those requiring personnel to fill such openings may have a convenient means of communication. Organizations that wish to avail themselves of this service should contact the American Meteorological Society for details and charges.

New Survey

CURRICULA IN THE ATMOSPHERIC SCIENCES

for Colleges and Universities in the United States and Canada Academic Year 1971-72

Recognizing the need for a continuous updating of the educational opportunities in the atmospheric sciences, the Society is pleased to announce publication of its latest survey. The updated report includes basic staff and curriculum information from over 60 colleges in the United States and Canada which have academic programs leading to undergraduate and/or graduate degrees in meteorology or in closely related disciplines.

The directory includes information on academic and key research personnel, types of degrees granted, course titles and credits, titles and authors of theses and dissertations which have been recently completed or are in progress, and descriptions of special facilities.

As one of the cornerstones in the Society's educational program, this survey is of ever-increasing interest and concern to the entire meteorological community, the prospective student, and the guidance counselor. It is an essential educational and reference source.
