Erratum

Metamorphic constraints on the character and displacement of the South Tibetan fault system, central Bhutanese Himalaya

F.J. Cooper, K.V. Hodges, and B.A. Adams

(v. 5, no. 1, p. 67–81, doi: 10.1130/L221.1)

In the “RSCM Thermometry” section (page 74, paragraph 5), Cooper et al. stated that both the Beyssac et al. (2002a) and Rahl et al. (2005) RSCM calibrations used a micro-Raman system with a 514 nm wavelength laser. In fact, Rahl et al. (2005) used a 532 nm laser, as did this study. Despite this, they chose not to use the Rahl et al. (2005) calibration because of the greater uncertainty stemming from the addition of peak height as a variable in the calculation.
