

Retractions

Pretorius E, Lipinski B. Iron alters red blood cell morphology. *Blood*. 2013;121(1):9.

The Editors retract the above-mentioned *Blood Work* illustration. The format of the publication did not match the *Blood Work* submission criteria. *Blood Work* is an educational tool for physicians and hematology students using photomicrographs and brief case descriptions. The purpose of the peer review process for *Blood Work* is identification of instructive images and not the evaluation of research studies; hence, the description of new research is inappropriate. In this case, the conclusions of the described case could have misled the readers of *Blood* and could have been misconstrued as fully vetted research results. No misconduct on the part of any of the authors was involved.

The authors did not consent to the retraction.
