

Erratum: Blum AK. Insulin Use in Pregnancy: An Update. *Diabetes Spectrum* 2016;29:92–97 (DOI:10.2337/diaspect.29.2.92)

In the original print version of the article listed above, there was a typographical error in Table 2 on page 94. In the row for the one-dose-for-all regimen, the insulin doses for NPH and insulin aspart or lispro were transposed. The insulin doses for NPH should have been 20 units in

the morning and 20 units at bedtime, whereas the doses for insulin aspart or lispro should have been 10 units at breakfast and 10 units at dinner.

The corrected table row appears below. The online version of the article was corrected on 20 May 2016 to reflect this change.

TABLE 2. Insulin Regimens for GDM and Pregnancy in Patients With Type 2 Diabetes

Regimen	Dose
One-dose-for-all regimen	NPH: 20 units in the morning and 20 units at bedtime Insulin aspart or lispro: 10 units at breakfast and 10 units at dinner
