Children who snore will likely outgrow it without complication.

Narcolepsy
- Narcolepsy never presents before puberty.
- Narcolepsy is a rare, sporadic condition that has no genetic implication.
- A formal sleep study is not necessary to diagnose narcolepsy in the presence of excessive sleepiness and cataplexy.
- Some children will outgrow narcolepsy.
- A well-controlled child with narcolepsy should not need regular daytime naps.

Miscellaneous
- Males are more likely than females to experience enuresis.
- Tricyclic antidepressants are the treatment of choice for enuresis.
- Mild sedatives are an effective long-term solution in getting infants regularly to sleep through the night.
- It is usually easy to distinguish night terrors from nocturnal seizures.

REFERENCES

OUR PRECARIOUS STATE

I am a member of a fragile species, still new to the earth, the youngest creatures of any scale, here only a few moments as evolutionary time is measured, a juvenile species, a child of a species. We are only tentatively set in place, error-prone, at risk of fumbling, in real danger at the moment of leaving behind only a thin layer of our fossils, radioactive at that.
