INFOGRAPHICS IN ANESTHESIOLOGY

Complex Information for Anesthesiologists Presented Quickly and Clearly

ANESTHESIOLOGY

REGIONAL BY REGION
The Spread of Modern Obstetric Practice

In the US and UK, adoption of regional anesthesia was associated with reduced maternal mortality and led to national guideline development.

While regional anesthesia for C-section is safer than general anesthesia, it requires specific training.

Kybele is a humanitarian organization that worked in Armenia to establish training for obstetric regional anesthesia.

Anesthesiologists working with Kybele have conducted training in 10 other countries.

Kybele’s training efforts in Armenia have been effective and have become self-sustaining.

More work is needed to bring safe obstetric anesthesia care to patients around the globe.

*Pregnancy-related mortality ratio due to anesthesia, maternal deaths per million live births. #Pregnancy-related mortality ratio due to anesthesia, maternal deaths per million maternities (live births, still births, pregnancy terminations, ectopic pregnancies, and abortions). ASA = American Society of Anesthesiologists; C-section = cesarean section; GA = general anesthesia; Reg = regional.
