

## Perioperative Normal Saline Administration and Delayed Graft Function in Patients Undergoing Kidney Transplantation: A Retrospective Cohort Study: Erratum

In the last sentence of the article beginning on page 621 in the October 2021 issue, “early graft function” should be “delayed graft function.” The revised sentence is as follows: “In conclusion, our study demonstrated an association of high percentages of normal saline with delayed graft function in patients undergoing kidney transplantation.”

The authors appreciate the opportunity to clarify the manuscript. The online version and PDF of the article have been corrected.

DOI: 10.1097/ALN.0000000000004075
