Correction

Errors in Abstract, Results, Tables, and Supplement 1

The Original Investigation titled "A National Study Exploring the Association Between Fluoride Levels and Dental Fluorosis,"1 published June 23, 2023, contained erroneous 95% CIs in the Abstract, Results, tables, and Supplement 1 that resulted from inadvertent application of incorrect sample weight variables during the data analyses. Also, sample data were added to the weighted data given in Table 1 to align the report with different preferences for displaying descriptive statistics. The authors have explained what happened in a Comment.2 This article has been corrected.
