Correction
Error in Figure

In the Original Investigation titled “Maternal Urinary Fluoride and Child Neurobehavior at Age 36 Months,”1 published May 20, 2024, there were errors in the Figure, including mislabeled y-axes (which should have been “Frequency” rather than “Frequency, %”), a mislabeled x-axis in panel B (which should have been “Externalizing Problems T-scores” rather than “Internalizing Problems T-Scores”), and a shifted y-axis scale that made the frequencies in the histogram appear incorrect. This article has been corrected.1
