Correction

Error in Results and Figure

In the Original Investigation titled “Physician Specialty Differences in Unprofessional Behaviors Observed and Reported by Coworkers,”1 published June 6, 2024, there were errors in the Results section and Figure 2. In the last paragraph of the Results section, the number of nonsurgeon nonproceduralists with a pattern of reports should have read 88 of 18,288. In Figure 2, the adjusted odds ratios for having at least 1 coworker concern compared with nonsurgeon nonproceduralists should have been 1.91 (95% CI, 1.63-2.24) for emergency medicine physicians, 2.34 (95% CI, 2.12-2.57) for nonsurgeon proceduralists, and 2.75 (95% CI, 2.51-3.01) for surgeons. The adjusted odds ratio comparing pediatric vs nonpediatric focus should have been 0.69 (95% CI, 0.61-0.78). This article has been corrected.1
