

ACKNOWLEDGMENTS

I am grateful to the IOSC Issue Paper Workgroup for the opportunity to prepare this paper and for their review of the drafts and helpful suggestions. Thanks to Gary Ott of NOAA, David Haynes of USCG, and Robert Pond of Soza & Company, Ltd. for providing an advance copy of Ott *et al.* (in press), allowing me to include relevant information in this paper. David Stalfort of USCG provided the Brown (1996) and the Yosie and Herbst (1998) references and suggested organizing identified criteria according to Brown's model, originally developed for business applications. I am grateful to John Robinson (Genwest, formerly of NOAA) for reviewing a draft and for helpful comments. David Stalfort, Robert Pond, and Alexis Steen (API) were tireless in providing multiple reviews and many excellent ideas, suggestions, and comments. Marc Schillinger and Bill Gorham of ENSR reviewed the first draft and provided significant input. They also made the resources of ENSR available in preparing drafts. Karen Worcester and Judy Brown of ENSR drafted figures, edited, assembled, and distributed paper drafts.
