## Correction

In the May 2023 article "The Mindful Ethical Practice and Resilience Academy: Sustainability of Impact" by Rushton et al (*Am J Crit Care*. 2023;32[3]:184-194; doi:<https://doi.org/10.4037/ajcc2023236>), the end of the penultimate paragraph of the Results section on page 188 should read: "The Ilfield Psychiatric Symptom Index measured 4 domains: anxiety, depression, anger, and cognitive disturbance. Scores for anxiety and cognitive disturbance showed no difference immediately after the intervention but significant improvement at both the 3-month and 6-month time points. Depression and anger scores improved significantly at all time points." We regret the error.
