**WE'VE
EXAGGERATED
HOW MUCH
CALCULATING
POWER IS
IN NEW
MATHCAD PLUS 5.0.
BUT ONLY
SLIGHTLY.**

New Mathcad® PLUS 5.0 is the most advanced version of Mathcad ever released. And that's no exaggeration.

You get more math functionality for computing derivatives and integrals, differential equations, advanced vector and matrix operations, statistical functions, curve fitting, and fast Fourier and wavelet transforms. It has a wider range of symbolic capabilities, and lets you do polar, contour and parametric plotting.

Simply enter equations in real math notation anywhere in the on-screen worksheet. Add text and graphics, display results in 2-D and 3-D, change variables and instantly update answers. Then print your results in presentation-quality documents.

Best of all, Mathcad PLUS 5.0 is more powerful than spreadsheets or calculators and easier than programming languages. And that's no exaggeration, either.

Mathcad PLUS 5.0 is \$299.95*. Call now for more information, or mail or fax the coupon below.

SOLID STATE PHYSICS

Thomas P. Witelski
California Institute of Technology

SOLID STATE PHYSICS uses the variational method to determine the energy states and wave functions of one-dimensional finite square well lattices. You can specify the potential height and lattice spacing. By solving for lattices of any finite size, you can observe the solutions for individual atoms, small groups of atoms, and the limit approaching an infinite lattice. The band structure shows the wave function superimposed on the lattice potential and its decomposition into the Bloch plane wave component.

CHAOS DATA ANALYZER

Julien C. Sprott
University of Wisconsin
George Rowlands
University of Warwick

CHAOS DATA ANALYZER is a research tool consisting of 14 programs that detect hidden determinism in seemingly random data. When chaos is found, calculations such as the probability distribution, power spectrum, Lyapunov exponent, and various measures of the fractal dimension enable you to determine properties of the equations underlying the behavior. Data can be displayed in phase-space plots, time records, return maps, and Poincaré movies.
