DIABETES MELLITUS

Fourth Edition

Considerable progress has been made in the understanding of diabetes over the past ten years; however, even as we gain in knowledge new controversies arise.

Therefore, the Committee on Professional Education of the American Diabetes Association has brought together some of the world's leading diabetologists to reassess previously held views, reflecting an integrated world-wide effort.

Some of the topics receiving added emphasis or appearing for the first time are:

- **hypoglycemia**
- **proinsulin**
- **C-peptide**
- **the role of glucagon in the diabetic state**
- **relationship between diabetes mellitus and coronary artery disease**
- **gastrointestinal problems**
- **dermatological manifestations**
