Silbernagel G, Kleber ME, Grammer TB, Winkelmann BR, Boehm BO, März W. Additional use of glycated hemoglobin for diagnosis of type 2 diabetes in people undergoing coronary angiography reveals a subgroup at increased cardiovascular risk. *Diabetes Care* 2011;34:2471–2473

In Table 1 of the article listed above, the mean \pm SD for glucose 2 h (mg/dL) in the T2DM ADA 2009 group should have been 238 ± 41 rather than 233 ± 65 and the percentage for all-cause death in the T2DM ADA 2009 group should have been 26.1 rather than 26.3. In addition, the mean \pm SD value for total cholesterol in the T2DM ADA 2009 group should have read 193 ± 40 rather than 193 (40), and the mean values for waist circumference in subjects without diabetes as per ADA 2010 definition, T2DM ADA 2010 group, and T2DM ADA 2009 group should have read 97 ± 12 rather than 97 (12), 101 ± 11 rather than 101 (11), and 101 ± 11 rather than 101 (11), respectively. The online version reflects these changes.
