

Index

A

ACID

- arachidonic
 - platelet metabolism in diabetics and, 44–47
- 13-azaprostanoic
 - and inhibition of arachidonic-acid-induced platelet aggregation in diabetics, 46–47

AGE

- and cardiovascular disease mortality in normoglycemic, borderline diabetic, and diabetics, 50–52

ALLOXAN DIABETES

- in rabbits
 - atherosclerosis incidence and, 55
- in rats
 - coagulation studies in, 36–37

ANGIOGRAPHY

- and elevated insulin responses to oral glucose
- in ischemic heart disease, 54

ANGIOTENSIN-CONVERTING ENZYME

- in endothelial cells of large and small blood vessels, 25

ANTIGEN

- factor VIII
 - in endothelial cells of large and small blood vessels, 25

ANTIGEN-ANTIBODY COMPLEXES

- vascular injury and, 2

ANTISERUM

- anti-platelet
 - and blocking of atherosclerosis, 3

AORTA

- chicken
 - insulin-induced lesions of, 55
- rabbit
 - comparison of types of reaction to arterial wall injury in, 11–12
 - and endothelial injury and atherogenesis, 2–3, 8–9

APOLIPOPROTEIN A

- and high-density lipoprotein metabolism in insulin-dependent diabetics, 84–85

APOPROTEINS

- and lipoprotein metabolism in atherosclerosis, 60–65, 83

ARACHIDONIC ACID

- atherogenesis and, 3

- platelet metabolism of in diabetics, 44–47

ARTERIES

- collagen and fibonectin
 - and diabetic serum and growth hormone, 16
- coronary
 - in acute myocardial infarction, 39
 - from cholesterol-fed miniature swine, 60, 61
- cultured monkey cells from
 - insulin effects on, 55–56
- and endothelial injury, 2–4
- immunological injury to
 - atherosclerosis and, 9
- injury to
 - atherogenesis and, 8–12
 - and herpesvirus-induced atherosclerosis in chickens, 30–31
- lipid metabolism
 - in streptozotocin-diabetic rats, 55
- stiffening in diabetics, 101

ATHEROSCLEROSIS

- animal models of, 60–61
- arterial wall metabolism and, 5
- and comparison of two types of reaction to arterial wall injury, 11–12
- in diabetics
 - and blood viscosity elevation, 102
 - distribution of atherosclerotic plaques in, 99
 - and endothelium as barrier to, 100–101
 - and fluid phase of coagulation, 35–38
 - impaired glucose tolerance and, 58–59
 - lipoproteins and, 4–5
 - physical factors in development of, 97–103
- endothelial injury and, 2–4, 6, 10–11
- effects of risk factors on, 39–42
- release from contact inhibition and, 21
- triglyceride-rich lipoproteins and, 19–22
- environmental determinants, 50
- foam cells in atheroma and, 3
- herpesvirus-induced
 - in chickens, 29–31
- hyperglycemia as risk factor in, 2, 49–53
- hyperinsulinemia and, 5
- immunologic injury and, 9
- induced by intimal injury
 - regression of, 10
- and ischemic complications in diabetics, 49–50
- lipoprotein metabolism in, 60–65
- and mechanical injury to aortic wall, 8–9

- antiplatelet serum and prevention of, 9
- mortality in diabetics and nondiabetics and, 1
- noncoronary, 49–50
- plasma lipoprotein abnormalities and, 82
- process of, 1
- racial differences in incidence of, 1
- and responses of arterial wall to endothelial injury, 8–12
- role of arterial injury in pathogenesis of, 18
- role of insulin in
 - in diabetics and nondiabetics, 54–57
- shear stress model of, 97–103, 105
- synergy of arterial injury and hypercholesterolemia in, 9
- types of lesions in, 12
- wound-repair model of, 39–42

13-AZAPROSTANOIC ACID

- and arachidonic-acid-induced platelet aggregation
 - in diabetics and nondiabetics, 46–47

B

BLOOD

- coagulation
 - fluid phase, and atherosclerosis in diabetics, 33–38
 - intrinsic and extrinsic pathways for, 34–35
- flow
 - endothelial responses to, atherogenesis and, 99–100
- platelets, see Blood platelets
- viscosity elevation in diabetics
 - atherogenesis and, 102

BLOOD GLUCOSE

- control
 - fibrinogen survival and, 36
- measurement
 - hyperglycemia as risk factor for atherosclerosis and, 90–93

BLOOD PLATELETS

- activation in diabetics, 42
- aggregation
 - in insulin-dependent diabetics, 45
 - and antiplatelet agents and fibrinogen survival, 37
- antiserum to,
 - blocking of atherosclerosis and, 3
- arachidonic acid metabolism
 - in diabetics, 44–47
- and atherogenesis, 3
- derived growth factor
 - atherogenesis and, 9–10

- in diabetics
 - atherogenesis and, 3-4, 42
- effects of atherosclerosis risk factors on, 39-42
- factor 4
 - in plasma of coronary artery disease, peripheral artery disease, and diabetes patients, 33-34
- factors, intimal hyperplasia and, 9-10
- function and turnover
 - in hypercholesterolemia and diabetes, 39
- and fluid phase of coagulation in diabetic atherosclerosis, 33-38
- nonadhesion to endothelial cells from large and small blood vessels, 26
- synthesis of prostaglandin endoperoxides
 - vascular disease and, 47

BLOOD VESSELS

- large and small
 - comparison of endothelial cells of, 24-27

C

- CARDIOVASCULAR DISEASE.** *See also* Heart disease
 plasma cholesterol as risk factor in, 76, 78

CELLS

- endothelial, *see* Endothelial cells
- rabbit aorta myomedial
 - as model for diabetic macroangiopathy, 14-16
- smooth muscle
 - atherogenesis and, 9-10
 - function in low oxygen environment, 41
 - insulin effects on, 55-56
 - insulin effects on lipid metabolism of, 56-57
 - proliferation, atherogenesis pathogenesis and, 18
 - proliferation in artery intima, 39

CHICKENS

- herpesvirus-induced atherosclerosis in, 28-31
- insulin-induced aortic lesions in, 55

CHOLESTEROL

- dietary
 - and lipoprotein metabolism in atherosclerosis, 60-65
- ester and free
 - in injury-induced lesions in rabbit aorta, 8-9
- in high-density lipoprotein particles diabetes and, 5
- levels
 - and herpesvirus-induced atherosclerosis in chickens, 29-31
- metabolism
 - in endothelial cells, 20, 22
- metabolism in diabetics
 - diet and, 76-81

CHROMATOGRAPHY

- DEAE-cellulose
 - and collagen assays in arterial wall, 16

COLLAGEN

- and arterial stiffening in diabetics, 101
- in arterial wall
 - growth hormone and increase in, 16

D**DIABETES MELLITUS**

- arterial stiffening in, 101
- atherogenesis and, 3-4
- and atherosclerosis, *see also* Atherosclerosis, in diabetics
 - and fluid phase of coagulation, 33-38
- mortality and, 1
- and "non-coronary cardiopathy," 49-50
- physical factors in development of, 97-103
- blood clotting assays in, 35
- causes of endothelial injury in, 2
- and cholesterol metabolism
 - diet and, 76-81
- and clotting factor levels, 35-36
- control
 - and high-density lipoprotein and cholesterol levels, 89
- duration
 - arterial calcification and, 14
 - and elevated blood viscosity
 - atherogenesis and, 102
 - endothelial cell studies in, 41-42
 - and endothelial injury, 2-3
 - high-density lipoproteins in, 82-86
 - and hypertriglyceridemia and atherosclerosis, 4-5
 - and inhibitors of coagulation proteases, 36
 - insulin-dependent
 - and high-density lipoprotein metabolism, 84-85
 - and insulin metabolism
 - and atherosclerosis, 55
 - insulin- and non-insulin-dependent
 - and hypertriglyceridemia, 66, 67, 68-69, 70, 71-74
 - non-insulin-dependent
 - and hyperinsulinemia, 1-2
 - and hyperinsulinemia and atherogenesis, 5
 - and hypertriglyceridemia, 70
 - and mortality from atherosclerosis, 1
 - platelet arachidonic acid metabolism in, 44-47

DIET

- and cholesterol metabolism in diabetes, 76-81
- high-fat high-cholesterol
 - and lipoprotein metabolism in atherosclerosis, 60-65
- and plasma lipids and cholesterol, 88

DNA

- synthesis
 - in cultured aortic smooth muscle cells from monkeys, insulin effects on, 55-56

DOGS

- liver secretion of B-very-low-density lipoproteins in, 63-64

E**ELECTROCARDIOGRAMS**

- abnormalities
 - and glucose intolerance and arterial disease, 50-52

ELECTROPHORESIS

- SDS-urea polyacrylamide gel
 - and collagen assays in arterial wall, 16

ENDOTHELIAL CELLS

- as barrier
 - atherogenesis and, 100-101
 - cholesterol metabolism, 20
 - contact inhibition in cultures, 20
 - function in low oxygen environment, 41
- injury
 - homocystinuria as model of platelet response to, 40
 - and risk factors for atherosclerosis, 39-42
- in large and small blood vessels, 32
- comparison of, 24-27
- features common to, 25-26
- migration of, 26-27
- nutritional requirements, 26
- substratum requirements for growth of, 26
- migration
 - and wound-repair response, 40
- receptors for triglyceride-rich lipoproteins, 19-22

ENDOTHELIUM. *See also* Endothelial cells

- permeability and wall shear stresses
 - atherogenesis and, 101
- responses to blood flow
 - atherogenesis and, 99-100

ENVIRONMENTAL FACTORS

- atherosclerosis in diabetics and, 50, 58

ENZYMES

- angiotensin-converting
 - in endothelial cells of large and small blood vessels, 25

EPIDEMIOLOGICAL STUDIES

- of role of abnormal insulin response to oral glucose
 - and atherosclerosis in diabetics and nondiabetics, 54-55

EPITHELIAL CELLS

- blockade of lipoprotein interiorization in, 20-21
- from large and small blood vessels
 - formation of three-dimensional networks in vitro, 27

ERYTHROCYTES

- oxygen transport in diabetics
 - arterial injury from hypoxia and, 2

F**FACTOR VIII**

- in diabetics, 35-36

FASTING

in alloxan diabetic rats
and coagulation studies, 36–37

FATS

dietary
and lipoprotein metabolism in ath-
erosclerosis, 60–65

FECAL BILE ACIDS

and sterol balance techniques
in cholesterol metabolism studies,
78–81, 89

FECAL NEUTRAL STEROIDS

and sterol balance techniques
in cholesterol metabolism studies,
78–81, 89

FEET

and peripheral vascular disease in dia-
betics, 49–50

FIBRINOGEN

in diabetics, 36
turnover
in coagulation studies, 36–37

FIBRINOLYTIC SYSTEM

in diabetes, 36

FIBROBLASTS

low-density lipoprotein receptors on, 60

FIBRONECTIN

accumulation in arterial wall
diabetic serum and growth hormone
and, 16
atherogenesis and, 5

G**GANGRENE**

diabetes and, 49

GASTROINTESTINAL SYSTEM

hyperinsulinemic response to oral glu-
cose and
atherosclerosis and, 54
small intestine
reductase activity in diabetic rats, hy-
percholesterolemia and, 80–81
triglyceride secretion
in streptozotocin-diabetic rats, 68

GLUCOSE

and arachidonic acid- and epinephrine-
induced platelet aggregation
in insulin-dependent diabetics, 45
intolerance
atherosclerosis and, 50–52, 58–59
oral
insulin responses to, atherosclerosis
in diabetics and nondiabetics
and, 54–57
plasma insulin response to
and atherosclerotic vascular disease
risk, 58–59
tolerance
and hypertriglyceridemia in diabetic
humans and rats, 68–69

GROWTH HORMONE

diabetic macroangiopathy and, 14–16
rabbit arterial myomedial cell growth
and, 14–16

H**HEART DISEASE**

coronary
hypertension as risk factor in insulin-
dependent juvenile-onset diabe-
tes for, 90–96
in diabetes
and diabetic macroangiopathy and
growth hormone, 14–16
and diabetic microangiopathy and
macroangiopathy, 14
ischemic
and abnormal insulin response to glu-
cose, 54, 55
in diabetics, 2, 49–50
and lipoproteins, 4–5

HEMOGLOBIN A_{1c}

and hypoxic arterial damage, 2

HEPARIN

and fibrinogen survival in hyperglyce-
mic diabetics, 37

HOMOCYSTEINURIA

endothelial injury and platelet response
in, 40

 **β -HYDROXY- β -METHYLGLUTARYL-CoA
REDUCTASE**

and cholesterol metabolism studies in
diabetic rats, 79–81

HYPERCHOLESTEROLEMIA

arterial injury and atherogenesis and, 9
coronary artery disease and, 4
in endothelial cell injury studies, 40–41
and impaired cell migration, 41

HYPERGLYCEMIA

atherosclerosis and, 2, 49–53
and hyperinsulinemia, 5
and blood clotting assays in diabetics,
35
and vascular volume, 34

HYPERINSULINEMIA

and atherosclerosis, 5
in non-insulin-dependent diabetics, 2

HYPERLIPIDEMIA

in endothelial cell injury studies, 40–41
and hemostasis in diabetes, 33–34

HYPERPHAGIA

and hypercholesterolemia in diabetic
rats, 80–81

HYPERTENSION

arterial stiffening and, 101
endothelial injury and, 2
as risk factor for renal and coronary
heart disease
in juvenile-onset diabetics, 90–96,
105

HYPERTRIGLYCERIDEMIA

and coronary artery disease, 4–5

diabetic

in insulin-dependent and non-insulin-
dependent diabetics and strep-
tozotocin-diabetic and nondia-
betic rats, 66–74

HYPOXIA

and endothelial and smooth muscle
cells in low oxygen environment
atherosclerosis and, 41

I**IMMUNOLOGY**

arterial injury and, 9, 31

INSULIN

action and response
in diabetic hypertriglyceridemia stud-
ies, 67
and arterial wall lipid metabolism
in streptozotocin-diabetic rats, 55
-dependent diabetes
and lipoprotein metabolism, 88–89
platelet arachidonic acid metabolism
in, 44–47
-dependent juvenile diabetes
hypertension as risk factor for renal
and coronary heart disease in,
90–96
-dependent and -non-dependent dia-
betes
high density lipoprotein metabolism
in, 84–86
effects on arterial lesions, 55
effects on cultured monkey arterial
cells, 55–56
and high-density lipoprotein metabo-
lism, 83–84
and hyperphagia
hypercholesterolemia and, 80–81
resistance
and hyperinsulinemia in non-insulin-
dependent diabetics, 2
role in atherosclerosis
in diabetics and nondiabetics, 54–57

**INTERMITTENT CLAUDICATION SYN-
DROME**

in diabetics, 49–50

J**JUVENILE DIABETES MELLITUS**

insulin-dependent
hypertension as risk factor for renal
and coronary heart disease in,
90–96

K**KETOACIDOSIS, DIABETIC**

mortality and, 1

KIDNEY

disease
hypertension as risk factor in insulin-
dependent juvenile diabetes for,
90–96

L

LESIONS

- arterial
 - insulin effect on, 55
- atherosclerotic
 - and injury to arterial wall, 8–12

LIPIDS

- accumulation in atherosclerotic lesions
 - induced in rabbit aorta, 11–12
- metabolism
 - in cultured rat arterial smooth muscle cells, insulin and, 56–57
 - endothelial cell biology and, 19–22
 - in streptozotocin-diabetic rat arteries, 55

LIPOPROTEIN LIPASE

- of adipose tissue
 - in obese diabetics and nondiabetics, 86

LIPOPROTEINS

- and atherogenesis in diabetics, 4–5
- and endothelial cell biology, 19–22
- epithelial cell block to interiorization of, 20–21
- high density
 - alterations by cholesterol feeding, 62–63
 - and diabetes, 82–86
 - and diabetic atherosclerosis, 86
 - metabolism of, 82–86
- low-density
 - atherosclerosis incidence and, 19, 88
 - endothelial damage and, 2
 - and high-fat high-cholesterol diets, 64
- metabolism
 - in atherosclerosis, 60–65
 - in diabetics, 88–89
 - and hyperinsulinemia, 5
- triglyceride-rich
 - endothelial cell uptake of, 21–22
- uptake into arterial smooth muscle cells, 5
- very-low-density remnant
 - atherogenesis in diabetes and, 4–5
- very-low-density-triglyceride secretion rate
 - in diabetic hypertriglyceridemia, 67
- β -very-low-density
 - and origins of cholesterol-accumulating foam cells in arterial walls, 63–64

LIVER

- secretion of β -very-low-density lipoproteins, 63–64
- triglyceride secretion
 - in streptozotocin-diabetic rats, 68

M

MACROANGIOPATHY, DIABETIC

- and endothelial cells of large and small blood vessels, 24–27
- growth hormone and, 14–16

MACROPHAGES

- atherosclerotic lesions and, 63–64

MAREK'S DISEASE

- in chickens
 - atherosclerosis and, 29–31

METABOLISM

- arterial wall
 - atherogenesis and, 5
- cholesterol
 - in diabetes, role of diet in, 76–81
 - in endothelial cells, 20
- high-density lipoproteins, 82–83
- insulin and, 83–84
- in insulin-dependent diabetics, 84–85
- in non-insulin-dependent diabetics, 85–86
- lipid
 - in cultured rat arterial smooth muscle cells, insulin and, 56–57
 - and endothelial cell biology, 19–22
- lipoprotein
 - in atherosclerosis, 60–65
 - in diabetes, 88–89
- platelet arachidonic acid
 - in diabetics, 44–47

MICROANGIOPATHY, DIABETIC

- and endothelial cells of large and small blood vessels, 24–27

MICROSCOPY

- of coronary arteries from cholesterol-fed miniature swine, 60, 61
- of endothelial cells of large and small blood vessels, 25
- of injured rabbit aorta
 - atherosclerotic lesions of, 8

MONKEYS

- cultured arterial cells
 - insulin effects on, 55–56

MORTALITY

- from atherosclerosis in diabetics and nondiabetics, 1
- cardiovascular
 - in diabetics, 50–52
- and hypertension
 - in insulin-dependent juvenile-onset diabetics, 90–96

MUSCLE

- arterial smooth cells
 - growth in diabetics, 4
- proliferation and endothelial injury, 3

MYOCARDIAL INFARCTION

- atherosclerosis and, 39

O

OBESITY

- atherosclerosis and diabetes and, 1
- and hypertension in diabetics
 - endothelial injury and, 2
- and hypertriglyceridemia
 - insulin resistance and hyperinsulinemia and, 4–5
- and lipoprotein lipase
 - in diabetics and nondiabetics, 86

P

PHYSICS

- and study of development of diabetic atherosclerosis, 97–103

PIGS. See Swine**PLASMA**

- cholesterol
 - in diabetes, 76, 77
- factor VIII
 - in diabetics, 35–36
- glucose, insulin, free fatty acids, and triglycerides
 - in streptozotocin-diabetic rats, 67–68
- insulin
 - response to glucose, atherosclerotic vascular risk and, 58–59
- lipids
 - dietary fat and cholesterol and, 88
- lipoproteins
 - metabolism in atherosclerosis, 60–65
- β -thromboglobulin and platelet factor 4
 - and coronary artery disease, peripheral artery disease, and diabetes, 33–34

POPULATION STUDIES

- of atherosclerotic vascular disease risk and plasma insulin response to glucose, 58–59
- of hyperglycemia as risk factor for atherosclerosis, 50–52
- of insulin-dependent juvenile-onset diabetes
 - hypertension and mortality in, 90–96
 - and relationship between insulin levels and atherosclerosis, 54–55

PROCOLLAGEN

- type 1
 - in arterial wall, growth hormone and, 16

PROSTACYCLIN

- production
 - by endothelial cells from large and small blood vessels, 26

PROSTAGLANDIN ENDOPEROXIDES

- synthesis by platelets, 47

PROTEASES INHIBITORS

- in diabetes, 36

PROTEINS

- coagulation and, 34–35

PROTHROMBIN

- in diabetics, 35

R

RABBITS

- aorta
 - comparison of two types of reaction to arterial wall injury in, 11–12
- mechanical injury and formation of atherosclerotic lesions in, 8–9
- and selective endothelial injury, 10–11

aorta myomedial cell growth
as model of diabetic macroangiopathy, 14–16
cholesterol-fed, alloxan-diabetic
insulin deficiency and atherosclerosis
incidence in, 55
endothelial injury and arterial wall injury
in, 2–3

RACE

and atherosclerosis incidence in Japanese diabetics, 1, 50, 58

RATS

alloxan-diabetic and fasted
coagulation studies in, 36–37
arterial smooth muscle cells
insulin effects on lipid metabolism of,
56–57
spontaneously obese, insulin resistant,
and hyperinsulinemic
streptozotocin and hypertriglyceridemia in, 70–71
streptozotocin-diabetic
arterial wall lipid metabolism in, 55
in cholesterol metabolism studies,
79–81
hypertriglyceridemia in, 66, 67–68,
69, 70–71, 72–74
increase in arterial myomedial cells
in, 15–16

RETINOPATHY, DIABETIC

and deterioration and closure of preexisting vessels, 24
platelet activation and plasma thromboxane B₂ in, 42
and platelet release factors, 34

RISK FACTORS FOR ATHEROSCLEROSIS

effects on platelets and vascular endothelium, 39–42
and endothelial and smooth muscle cells
in diabetics, 41–42
and homocystinuria, 40
and hyperlipidemia, 40–41
and hypoxia, 41
and high density lipoproteins in diabetics, 86
hyperglycemia, 49–53
and hypertension in juvenile-onset insulin-dependent diabetics, 90–96
plasma cholesterol levels and, 76, 78
role of insulin in atherosclerosis and,
54, 55

S**SERUM**

antiplatelet
and prevention of atherosclerosis in mechanically injured arteries, 9
cholesterol, high-density lipoproteins,
and triglycerides

and hypertension as risk factor in insulin-dependent juvenile-onset diabetics, 94, 96

diabetic
and PAS-positive fibronectin and collagen in arterial wall, 16
fibrinogen in diabetics
atherosclerosis and, 3
from patients with familial hypercholesterolemia, familial hypertriglyceridemia, and combined hyperlipidemia
and endothelial cell studies, 40–41

SEX

and cardiovascular disease mortality in normoglycemic, borderline diabetic, and diabetic men and women, 50–52
and coronary artery disease in diabetics, 14
and hyperinsulinemia and atherosclerosis, 5
and risk of occlusive vascular disease in diabetics, 2

SMOKING

and endothelial damage, 2
and hypertension as risk factor for atherosclerosis, 94, 96
and hypoxia and atherosclerosis
endothelial and smooth muscle cell function in low oxygen environment and, 41
