Errata

Cardiac hypertrophy impairs recovery from ischaemia because there is a reduced reactive hyperaemic response

Aileen M. McAinsh a, Mark A. Turner a, Danny O’Harc c, Ratnam Nithythyananthan b, Desmond G. Johnston b, Daniel J. O’Gorman a, Desmond J. Sheridan a,*

a Academic Cardiology Unit, St. Mary’s Hospital Medical School, 10th Floor, Queen Elizabeth the Queen Mother Wing, South Wharf Road, London W2 INY, UK
b Department of Metabolic Medicine, St. Mary’s Hospital Medical School, 10th Floor, Queen Elizabeth the Queen Mother Wing, South Wharf Road, London W2 INY, UK
c PFSU, Imperial College of Science, Technology and Medicine, London, SW7, UK

On page 119 in Figure 6, panels A and B appear reversed. The lefthand panel is “B” and the righthand panel “A”. Also, in the righthand panel the symbols appear reversed: squares apply to “Hypertrophy” and circles to “Sham”. With apologies to the authors for this error.
