

Index

A

ACID

platelet arachidonic, metabolism in diabetics, 16, 17

ADENYLATE CYCLASE ACTIVITY

platelet, diabetes and, 48

ALBUMIN

glomerular filtration in insulin-dependent diabetics, 92–95

ALBUMINURIA

early detection of diabetic nephropathy and, 83
incipient diabetic nephropathy and, 1

ANGIOGRAPHY. See Fluorescein angiography

ANTIBODIES

basement membrane-related antigen studies in diabetic nephropathy, 34–39

ANTIGENS

basement membrane-associated in diabetic nephropathy, 34–39
complement poly-C9, diabetic vascular disease and, 2
factor VIII-related, diabetes and, 4

ANTIHYPERTENSIVE AGENTS

diabetic nephropathy and, 69–70, 72–73, 83–87
kidney function in diabetic nephropathy and, 86–87

ANTIPLATELET AGENTS

diabetic vascular disease and, 18

ARACHIDONIC ACID

platelet, metabolism in diabetics, 16, 17

ARTERIES

asymptomatic insufficiency in diabetics, plasminogen activator release and, 4
prostacyclin production in diabetics, 17

ATHEROSCLEROSIS

capillary basement membrane thickening in diabetics and, 96–99
diabetic hemorrheology and, 62

B

BASEMENT MEMBRANE

capillary, diabetes and, 96–99

glomerular

mesangial regions, long-term diabetes and, 79–82
thickening in diabetes, 37–38
thickening in diabetic nephropathy, 52
polyantigenic expansion of constituents of, diabetic nephropathy and, 34–39

thickening

diabetes duration and, 2
diabetic retina and, 21

BLINDNESS

diabetic retinopathy and, 20

BLOOD

erythrocyte deformability in diabetics, 60
fibrinolytic activity in diabetics, autonomic neuropathy and, 4–6
flow, diabetes and, 56–62
platelets, see Blood platelets
red cell deformability
capillary basement membranes and, 99
and platelet aggregation, insulin therapy in diabetics and, 88–91
-retinal barrier in diabetics, retinopathy and, 20–27
viscosity measurement in diabetes, 57–61

BLOOD PLATELETS

adhesiveness and aggregation in diabetics, 4
aggregation, insulin action in diabetics and, 88–91
arachidonic acid metabolism in diabetics, 16, 17
changes in diabetes, 2
function
metabolic control in diabetes and, 16–17
microvascular disease and, 14–18
function and enzyme activities
endothelial damage in diabetics and, 47–50
-plasma interactions, see Plasma-platelet interactions

BLOOD PRESSURE. See also Hypertension

diabetic nephropathy and, 68, 83–87
systolic, diabetes and, 5

BLOOD SUGAR

red cell deformability and platelet aggregation and, insulin therapy and, 88–91

BLOOD-RETINAL BARRIER

alteration of, diabetic control and, 26

BODY

extremities, autonomic neuropathy in diabetics and, 4–6

BOWMAN'S CAPSULE

thickening in insulin-dependent diabetes, 38

C

CALCIUM

ultrafilterable, renal tubular reabsorption in diabetic children, 28–32

CAPILLARIES

basement membrane changes in diabetics, 96–99
glomerular, protein filtration and, 94
nonperfusion, quantitative evaluation of fluorescein angiograms and, 8–13
retinal, changes in retinopathy, 21

CIRCULATION

capillary basement membrane changes in diabetes and, 96–99

COMPLEMENT

poly-C9 levels in diabetics, 2

D

DAMAD STUDY, 8

DEXTRAN

clearance in diabetic nephropathy, 73–74, 75

DIABETES MELLITUS

blood flow and, 56–62
blood platelet changes in, 2
blood-retinal barrier in, retinopathy and, 20–27
capillary basement membranes in, 96–99
complement poly-C9 levels in, 2
control
alteration of blood-retinal barrier and, 26
genetic hypothesis of nephropathy and, 54–55
determinants of glomerular filtration of proteins in, 92–95
duration, basement membrane thickening and, 2
erythrocyte changes in, 2
glomerulopathy in, 79–82

incipient nephropathy and, hypertension and, 1
 insulin-dependent
 altered endothelial function in, 14–18
 platelets and vascular disease in, 14–18
 metabolic control in, platelet function and, 16–17
 nephropathy and, *see* Nephropathy, diabetic
 platelet enzyme activities and endothelial damage in, 47–50
 quantitative evaluation of fluorescein angiograms and, 8–13
 renal disease and, 1–2
 renal disease stages in, 64–77
 uncontrolled, red cell deformability and platelet aggregation in, insulin therapy and, 88–91

DIPYRAMIDOLE-ASPIRIN IN DIABETIC MICROANGIOPATHY STUDY.
 See DAMAD

DOGS

spontaneously diabetic, blood-retinal barrier changes and, 26

E

ENDOTHELIAL CELLS

changes in, retinopathy and, 20–21
 damage, platelet enzyme activities in diabetes and, 47–50
 function in insulin-dependent diabetics, microangiopathy and, 14, 17

ENDOTHELIUM

vascular, plasminogen activator production in diabetics, 4–6

ENZYMES. *See also* Plasminogen activator

platelet, endothelial damage in diabetes and, 47–50

ERYTHROCYTES

deformability in diabetes, insulin treatment and, 88–91

EXERCISE

microalbuminuria in diabetics and, 52

EXERCISE PROVOCATION TEST

evaluation of renal function in diabetics and, 66, 67, 69, 70–71

F

FIBRINOLYSIS

endothelial function in diabetes, and, 17

FLUORESCIN ANGIOGRAPHY

quantifying microaneurysms from, 8–13

FLUOROPHOTOMETRY

vitreous
 blood-retinal barrier and retinopathy and, 20–27

development of, 23–25
 diabetes and, 2

G

GLOMERULAR FILTRATION RATE

determinants in insulin-dependent diabetics, 92–95
 diabetic nephropathy and, 84
 glomerular filtration barrier changes in diabetic nephropathy and, 40–45
 in insulin-dependent diabetics, 52
 juvenile diabetes without microangiopathy and, 28–32

GLOMERULOPATHY, DIABETIC. *See also*

Nephropathy, diabetic
 structural characteristics of early and advanced stages of, 79–82
 structure-function interrelationships in, 81–82

GLUCOSE

renal tubular reabsorption in diabetic children, 28–32

GLYCOSYLATED HEMOGLOBIN

levels, alteration of blood-retinal barrier and, 25, 26

H

HEREDITY

diabetic nephropathy and, 54–55

HYPERCHOLESTEROLEMIA

retinopathy and nephropathy and, 99

HYPERGLYCEMIA

glomerular pressure and hemodynamics and, 32

HYPERTENSION

diabetic nephropathy and antihypertensive treatment and, 83–87
 incipient diabetic renal disease and, 1

I

IMMUNOGLOBULIN G

glomerular filtration in insulin-dependent diabetics, 92–95
 localization in diabetic nephropathy, 52
 urinary loss, diabetic nephropathy and proteinuria mechanisms and, 40–45

IMMUNOHISTOCHEMISTRY

basement membrane-related antigens and diabetic nephropathy study, 36–39

INSULIN

-dependent diabetes
 determinants of glomerular filtration in, 92–95

fibrinolytic activity in, 4–6
 glomerulopathy in, 79–82
 kidney basement membrane antigens in, 34–39
 platelet enzyme activities in, 47–50
 -dependent juvenile diabetics, renal tubular reabsorption and glomerular filtration rates in, 28–32
 therapy
 alteration of blood-retinal barrier and, 26
 diabetic nephropathy and, 65–66
 platelet function and, 16–17
 red cells and platelets and, 88–91

J

JUVENILE DIABETES

protection against basement membrane thickening in, 2
 renal tubular reabsorption and glomerular filtration rates and, 28–32

K

KIDNEY

diabetic nephropathy
 hypertension and, 1
 proteinuria, mechanisms in, 40–45
 disease stages in diabetics, 64–77
 enlargement, diabetes and, 52
 function
 antihypertensives in nephropathy and, 86–87
 in diabetic nephropathy, 83–84
 glomerular basement membrane, polyanitigenic expansion of constituents in diabetic nephropathy, 34–39
 glomerular filtration barrier studies, diabetic nephropathy and, 40–45
 glomerular filtration of proteins in insulin-dependent diabetics, 92–95
 glomerular hyperfiltration in early diabetes, 2
 glomerular mesangium, accumulation of intercellular substances in, diabetes and, 1–2
 glomerulopathy in diabetics, 79–82
 remnant kidney model, 53
 stages of diabetic nephropathy, 64–77
 tubular basement membrane thickening, 2
 tubular reabsorption and glomerular filtration rates, juvenile diabetes and, 28–32

L

LESIONS

of diabetic nephropathy, 34, 52–53
 microaneurysms, quantitation with fluorescein angiography, 8–13

M**MALONDIALDEHYDE**

platelet production in diabetics, 48–49

METABOLISM

platelet arachidonic acid, in diabetics, 16, 17

MICE

antibodies, in basement-membrane related antigens study, 34–39

MICROALBUMINURIA

diabetic nephropathy stage and, 72
exercise in diabetes and, 52

MICROANGIOPATHY

blood flow abnormalities in diabetics and, 61–62
fluorescein angiograms and quantitative evaluation of microaneurysms in, 8–13
mechanisms involved in, 2–3
pathogenesis, 1
platelet and endothelial function and, 14–18
platelet enzyme activities and, 47–50
platelet microthrombi and, 17–18
renal tubular reabsorption rates and glomerular filtration rates in juvenile diabetics, 28–32

MICROSCOPY

electron, of glomeruli from long-term diabetics, 79–82

MICROVASCULAR DISEASE

platelet and endothelial function and, 14–18

N**NEPHROPATHY, DIABETIC, 52–55. See**

also Glomerulopathy, diabetic arterial blood pressure in, 84–87
autoregulation in kidney and, 72
basement-membrane associated, polyantigenic expansion in, 34–39
defined, 52
early detection of, 83
early hypertrophy-hyperfunction stage, 65–66
genetic hypothesis of, 54–55
glomerular lesions without clinical disease, 66–69
hypertension and antihypertensive treatment and, 68, 83–87
incipient stage, 1, 69–72
irreversibility of, 53–54
overt stage, 72–77
proteinuria mechanisms in, 40–45
remnant kidney model in rats of, 53, 54
risk factors of, 54
specificity of pathology of, 52–53
stages of, 64–77

NEUROPATHY, DIABETIC

autonomic, fibrinolytic activity, circulation and, 4–6

P**PANCREATECTOMY**

in rhesus monkeys, blood-retinal barrier alterations in, 26

PHOSPHATE

renal tubular reabsorption in diabetic children, 28–32

PHOTOCOAGULATION

fluorescein angiograms and quantitative evaluation of microaneurysms and, 8

PLASMA

glucose, sodium, calcium, and phosphate, juvenile diabetes and, 28–32
platelet interactions in diabetics, 14–16
platelet-specific β -thromboglobulin in diabetics, 14
 β -thromboglobulin, diabetes and, 48
von Willebrand factor, diabetes and, 17

PLASMIN

conversion of plasminogen to, diabetes and, 17

PLASMINOGEN ACTIVATOR

fibrinolysis in diabetes and, 17
production in diabetics, 4–6

PLETHYSMOGRAPHY

venous occlusion in diabetics, 4–6

PROSTACYCLIN

endothelial cell synthesis in diabetes and, 17

PROSTAGLANDIN

platelet and endothelial function in diabetics and, 14

PROTEINS

glomerular filtration of
determinants in insulin-dependent diabetics, 92–95
diabetic nephropathy and, 41, 42

PROTEINURIA

determinants of glomerular filtration of proteins in insulin-dependent diabetics and, 92–95
mechanisms of, in diabetic nephropathy, 40–45, 73–74

R**RATS**

diabetic
endothelial cell prostacyclin production, 17
mesangial accumulation in, 2
platelet microthrombi in, 17–18
remnant kidney model in, 53
streptozotocin-diabetic, vitreous fluorophotometry in, 24–25

RETINA

-blood barrier in diabetics, retinopathy and, 20–27

RETINOPATHY

antiplatelet agents and, 18
blindness from, 20
blood-retinal barrier and, 20–27
diabetic nephropathy and, 84
diabetic nephropathy diagnosis and, 41
fibrinolytic response and, 4–6
fluorescein angiograms and microaneurysm counts and, 8–13
pathophysiology, blood-retinal barrier and, 20–27
platelet enzyme activities in diabetics and, 47–50
red cell changes in diabetics and, 99
vitreous fluorescence and, 2

RHESUS MONKEYS

diabetic blood-retinal barrier alterations in, 26

S**SODIUM**

renal tubular reabsorption in diabetic children, 28–32

STREPTOZOTOCIN DIABETES

in rhesus monkeys, blood-retinal barrier alterations in, 26
in rats, vitreous fluorophotometry in, 24–25

T**THERMOGRAPHY**

in diabetics, 5, 6

B-THROMBOGLOBULIN

plasma levels in diabetics, 14, 48, 49

TISSUE

kidney basement membrane, in nephropathy studies, 34–39

U**URINE**

albumin excretion, diabetic nephropathy evaluation and, 66–70, 83–88
excretion rates of glucose, sodium, calcium, and phosphate in diabetic children, 28–32
immunoglobulin-G losses proteinuria in diabetic nephropathy and, 40–45

V

VALSALVA MANEUVER

autonomic neuropathy and, 5

VASCULAR DISEASE

antiplatelet agents and, 18
capillary basement membrane changes
in diabetics and, 96–99
peripheral, platelet enzyme activities in
diabetics, 47–50

platelet and endothelial function and,
14–18

VASCULAR SYSTEM

endothelium, fibrinolytic activity in dia-
betics and, 4–6
retinal, retinopathy and, 22–23

VEINS

occlusion, fibrinolytic response in dia-
betics, 4
prostacyclin production in diabetics, 17

VON WILLEBRAND FACTOR

levels in diabetics, 2, 17, 49
platelet aggregation in diabetics and, 50.

W

WATER

glomerular filtration of, diabetic nephrop-
athy and, 41, 42
