

SUBJECT INDEX

- Acidogenesis relation to in-reactor granule yield 21-30
- ANANOX[®] process anaerobic-aerobic combined sewage treatment with nutrient removal 388-394
- Anaerobic activity
- effects of industrial chemicals on 11-20
 - measured by sequential automated methanometry (SAM) 11-20
 - aerobic combined sewage treatment process with nutrient removal 383-394
- biodegradability
- of organic components of municipal solid wastes 285-293
 - use of methanogenic activity tests to screen for 31-40
- composting, sequential batch, of organic fraction of municipal solid waste 327-339
- conversion, dry, of municipal solid waste by Dranco process 295-300
- degradation of municipal wastes in landfill 243-253
- digesters
- batch and continuous, biochemical inhibition of sulfate reduction 51-60
 - characterization and comparison of biomass from mesophilic and thermophilic fixed bed 203-212
 - pulsed, design and performance of 351-360
 - stability of operation of food-processing wastewater 73-82
- digestion
- of distillery wastewater in a two-phase UASB system 361-371
 - of wool scouring wastewater in a digester combined with membrane filter 341-350
 - semi-dry, of municipal solid waste; influence of process parameters on substrate utilisation model 83-92
- fluidized bed reactor, control parameter variations when subjected to organic shock loads 93-101
- granule consortium, a structured model 1-10
- removal of chlorate from bleach effluents 237-242
- sludge, kinetic basis of new start up method to ensure rapid granulation 113-122
- sludges, use of methanogenic activity tests to characterise 31-40
- thermophilic digestion of vinasse in a pilot plant UASB reactor 213-222
- treatment
- of domestic sewage under moderate climatic conditions using upflow reactors at increased superficial velocities 167-178
 - of manure together with industrial waste 311-318
 - of municipal solid waste landfill leachate: operation of pilot scale UASB/AF reactor 255-264
 - of petrochemical wastewater from terephthalic acid plant 223-235
 - of synthetic sulfate-containing wastewater under thermophilic conditions 193-202
 - of wastewater, application of BIOBED[®] upflow fluidized bed process 373-382
 - of wastewater with a low concentration of organics using a fluidized bed reactor 179-191
 - of wastewater, towards a useful dynamic model 61-71
- BIOBED[®] upflow fluidized bed process, for anaerobic wastewater treatment 373-382
- BIOCEL reactor, dry anaerobic digestion of solid organic waste at pilot plant scale 301-310
- Bleach effluents, anaerobic removal of chlorate 237-242
- Chlorate, anaerobic removal from bleach effluents 237-242
- Digestion of solid wastes, new systems for 319-326
- Dranco process, dry anaerobic conversion of municipal solid waste 295-300
- Dry anaerobic conversion of municipal solid waste by Dranco process 295-300
- digestion of solid organic waste in a BIOCEL reactor at pilot plant scale 301-310

- Dynamic modelling, of anaerobic wastewater treatment process 61-71
- Fixed film stationary bed reactor, acclimatization of methanogenic consortium to polychlorinated compounds 265-273
- Fluidized bed reactor
anaerobic treatment of wastewater with a low concentration of organics 179-191
control parameter variations when subjected to organic shock loads 93-101
- Granulation of anaerobic sludge, kinetic basis of new start-up method 113-122
- Granule
consortium, anaerobic, a structured model 1-10
yield, relation to acidogenesis 21-30
- India, performance of the 5MLD UASB reactor for sewage treatment at Kapur 123-133
- Landfill
anaerobic degradation of municipal wastes in 243-253
leachate, anaerobic treatment of: operation of pilot scale UASB/AF reactor 255-264
- Liquid upflow velocity, effect on start-up and steady-state periods of lab-scale UASB reactors 41-50
- Membrane module, field test with municipal sewage of methane gas production system 135-141
- Mesophilic and thermophilic fixed bed anaerobic digesters, characterization and comparison of biomass 203-212
- Methane gas production system incorporating a membrane module, field test with municipal sewage 135-141
- Methanogenic
activity tests, use of to characterize anaerobic sludges, screen for anaerobic biodegradability and determine toxicity thresholds 31-40
consortium, acclimatization of, to polychlorinated compounds in a fixed film stationary bed reactor 265-273
fermentation, treatment of Lees vinasses of red wine in presence of tannins and sulphides 275-284
- Municipal
solid waste
dry anaerobic
conversion by Dranco process 295-300
digestion in a BIOCEL reactor at pilot plant scale 301-310
semi-dry anaerobic digestion of; influence of process parameters on substrate utilisation model 83-92
sequential batch composting of organic fraction 327-339
solid wastes
anaerobic biodegradability of organic components 285-293
new systems for digestion of 391-326
wastes, anaerobic degradation in landfill 243-253
- New start-up method to ensure rapid granulation of anaerobic sludge, kinetic basis 113-122
- Organic components of municipal solid wastes, anaerobic biodegradability 285-293
- Petrochemical wastewater from a terephthalic acid plant, anaerobic treatment of 223-235
- Pulsed anaerobic digesters, design and performance of 351-360
- Semi-dry anaerobic digestion of municipal solid waste; influence of process parameters on substrate utilisation model 83-92
- Sequential automated methanometry (SAM), to measure effect of industrial chemicals on anaerobic activity 11-20
- Sewage treatment
anaerobic, under moderate climatic conditions using upflow reactors at increased superficial velocities 167-178
by UASB reactor; operation results and recommendations for design and utilisation 143-157
field test of a composite methane gas production system incorporating a membrane module 135-141
full-scale application of UASB technology 159-166
performance of the 5MLD UASB reactor at Kapur, India 123-133
with nutrient removal, anaerobic-aerobic combined process 383-394
- Sulfate
-containing wastewater, anaerobic treatment under thermophilic conditions 193-202
reduction, biochemical inhibition in batch and continuous anaerobic digesters 51-60
- Terephthalic acid plant, anaerobic treatment of petrochemical wastewater from 223-235
- Thermophilic
anaerobic digestion of vinasse in a pilot plant UASB reactor 213-222

- and mesophilic fixed bed anaerobic digesters, characterization and comparison of biomass 203-212
- Toxicity thresholds against individual anaerobic trophic groups and species; use of methanogenic activity tests to determine 31-40
- UASB
 - /AF hybrid reactor; operation of pilot scale in anaerobic treatment of solid waste landfill leachate 255-264
 - reactor
 - kinetic studies with increasing COD concentrations 103-111
 - performance of the 5MLD for sewage treatment at Kapur, India 123-133
 - sewage treatment; operation results and recommendations for design and utilisation 143-157
 - thermophilic anaerobic digestion of vinasse in pilot plant 213-222
 - reactors (lab-scale), start-up and steady-state performance 41-50
 - technology, full-scale application for sewage treatment 159-166
 - two-phase system, anaerobic digestion of distillery wastewater 361-371
- Upflow
 - fluidized bed process, application of BIOBED for anaerobic wastewater treatment 373-382
 - reactors at increased superficial velocities, anaerobic treatment of domestic sewage under moderate climatic conditions 167-178
- Wastewater
 - distillery, anaerobic digestion in a two-phase UASB system 361-371
 - treatment
 - anaerobic application of BIOBED upflow fluidized bed process 373-382
 - of petrochemical from a terephthalic acid plant 223-235
 - process, useful dynamic model 61-71
 - with a low concentration of organics using an anaerobic fluidized bed reactor 179-191
 - wool scouring, high rate anaerobic digestion of 341-350
