Some viruses seem able to change their shapes  
under varying environmental conditions, a Uni-  
versity of Pittsburgh research team told the  
American Chemical Society's 126th national  
meeting. The discovery of this previously un-  
suspected virus property may prove to be a  
highly significant clue in understanding how the  
tiny particles infect the cells of their victims,  
according to Professor Max A. Lauffer, a bio-  
chemist who presented the report. Dr. Lauffer is  
head of the Department of Biophysics at the  
University of Pittsburgh.
