

Like your school, it's built to last.

*AO Series One-Sixty
student microscope.*

The AO Series One-Sixty student microscopes are rugged enough to withstand many years of daily use. It's not uncommon for several student generations to have used the same AO microscopes. You can expect similar performance from the One-Sixty.

Years from now, parts and repair service will still be available for the One-Sixty, should something get broken accidentally or wear out. AO has been serving the scientific community continuously for 137 years. And we'll be around for many more.

The One-Sixty gives your students many of the same features found in more expensive professional laboratory microscopes—advanced infinity-corrected optics, tamper-proof in-base illuminator, built-in substage condenser, reversible monocular or dual-viewing body, wide-field eyepieces, all-metal base, and exclusive AO nosepiece focusing that prevents damage to slides and objectives.

The AO One-Sixty. Consider it a long-term investment for your school. Ask your AO dealer representative about it, or write for a brochure. American Optical, Scientific Instrument Division, Box 123, Buffalo, NY 14240.
