evolution content is not an issue, but the spoof of Christmas could be controversial.

For any teacher who wants to add some fun to his/her classroom, **Dr. Art - The Singing Scientist** is a wonderful tool to use. The songs can be used as introduction, reinforcement or review. Although some of the tunes might not be as familiar to students, they can easily identify with the rap songs. Some will definitely enjoy writing biology

songs of their own. The final song on *Bio-Rhythms II*, "Do You Know How Much I Miss You," is primarily for teachers, and it is a wonderful expression of the feelings we all have when we are not in school. It provides a fitting ending to a CD that teachers will find extremely useful and enjoyable.

Web Site Review

EVOLUTION

Watch this site!

A PBS seven-part series (8 hours) on evolution will be broadcast in late September. Resources promised include a web library of images and primary source documents, interactive experiences, and a teacher's guide to using the program as part of a high school biology cur-

riculum. As usual, you can tape the shows for classroom use up to one year after they are aired. They will also be available for purchase. You can now sign up for a newsletter and the guide at <http://www.pbs.org/evolution>.
