

ERRATUM: Post–12 Ma deformation in the lower Colorado River corridor, southwestern USA: Implications for diffuse transtension and the Bouse Formation

Jacob O. Thacker, Karl E. Karlstrom, Laura J. Crossey, Ryan S. Crow, Colleen E. Cassidy, L. Sue Beard, John S. Singleton, Evan D. Strickland, Nikki M. Seymour, and Michael R. Wyatt

ORIGINAL ARTICLE: 2020, v. 16, no. 1, p. 111–135, <https://doi.org/10.1130/GES02104.1>. Published online 20 December 2019.

ERRATUM: 2020, v. 16, no. 1, p. 473, <https://doi.org/10/1130/GES02104e.1>. Published online 10 January 2020.

In the fifth sentence of the Abstract (p. 111), “basalt” should instead be “basal.” The sentence should be “Bouse Formation **basal** carbonate locally exhibits outcrop-scale (tens of meters) syndepositional dips of 30°–90°, draped over and encrusted upon paleotopography, and has a basin-wide vertical distribution of as much as 500 m.”
