PERIPROSTHETIC OF THE FEMUR AND ACETABULUM- AN EMERGING PROBLEM

Michael P. Muldoon, MD
Sharp Memorial Hospital, San Diego, CA, USA

ABSTRACT

Presentation will review the epidemiology, risk factors and treatments of fractures of the pelvis and femur associated with total hip arthroplasty. The attendee will be exposed to classification systems and treatment rationale base on accepted criteria. Additionally the at risk patient will be clarified in respect to types of implants, duration of service and pathologic comorbidities.
