

## ACKNOWLEDGMENT TO REVIEWERS

To the many reviewers of papers submitted to *Blood*, we are grateful not only as Editors but on behalf of the authors of the papers. The reviews have almost invariably been of great value to the authors and thus to the readership of *Blood* and to the general community of scientific medicine. Without the high standards set by our reviewers (and Associate Editors), *Blood* would surely be unable to maintain its present position. The following reviewers have been of great help during the past year:
