TUMORS OF THE INTESTINES. *David A. Wood, M.D.*

Armed Forces Institute of Pathology, Subcommittee on Oncology, Committee of Pathology, Division of Medical Sciences, National Academy of Sciences, National Research Council, Washington, D. C.

This is one of the admirable atlases of tumor pathology published by the Armed Forces Institute of Pathology with the collaboration of the National Academy of Sciences and National Research Council. For hematologists, it is of interest from many standpoints, but particularly in the discussions and photographs dealing with Mesodermal tumors of the intestinal tract, including "Lymphoreticular tumors," and Angiosarcoma.—*William Dameshek, M.D.*
