**Forestry**

FORESTRY, is published by the Institute of Chartered Foresters four times per year in February, May, August and November. It provides a means for the publication of the results of practice and research in forestry in its widest sense, including the management of forests, the production and harvesting of forest produce, and other techniques for realising the objects of management, together with basic sciences such as forest physiology, ecology, soils, mycology, zoology, economics, wood structure, etc. Critical or constructive reviews are particularly welcome. In considering suitability for publication attention is given to both the practical value and the originality of contributions. Preference is given to papers which concern or are of relevance to forestry in Europe. The Institute as a body takes no responsibility for the views expressed by contributors or the Editors.

All communications other than editorial should be sent to the publishers, Oxford University Press, Journals Subscriptions Department, Great Clarendon Street, Oxford OX2 6DP.

**Notice to contributors**

Contributions, written in English, should be sent to the Editor, Institute of Chartered Foresters, 7A St Colme Street, Edinburgh EH3 6AA. No article should be submitted which is being offered to any other Journal for prior or simultaneous publication. Authors should examine a recent issue of Forestry and follow the advice on presentation given below to save time and avoid unnecessary correspondence. Papers not following these requirements will be returned to authors. Authors will be asked to assign the Institute of Chartered Foresters the worldwide copyright on their papers. Two types of papers will be considered for publication:

- **Original articles** or **Review articles** will normally have a maximum length of 12 printed pages, including tables, illustrations and references. Longer papers will only be accepted in exceptional circumstances. Manuscripts ready for printing will normally be published in order of receipt.

- **Research notes** may be up to two pages in length. They are particularly appropriate for accounts of preliminary results of work in progress and less extensive pieces of research. They will normally be published quickly after receipt of completed manuscripts. The editors may, on occasion, suggest that submitted papers are resubmitted in this form.

1. Three copies of the text of manuscripts should be submitted and a copy retained for checking proofs. Typing should be double-spaced throughout (including references), leaving a 2.5 cm margin at the left, top and bottom. A4-size paper is preferred, and a font size no smaller than 11 should be used for word processed manuscripts.

2. Tables, typed on separate pages, should be collected at the end of the text and numbered in Arabic numerals. Their approximate position in the text should be indicated in the margin.

3. Figures. Line drawings for text-figures should be in black ink on white paper, tracing paper or plastic, etc. They should be on a scale to permit reduction to half their original size. Computer-drawn graphics will be acceptable only from high-quality printers or plotters. With other forms of drawing, lettering and symbols should be indicated in pencil, preferably on a photocopy or overlay, with captions typed on a separate sheet. Care should be taken to avoid inaccuracies as corrections are expensive and the Institute reserves the right to charge for new artwork required as a result of an author’s mistake.
4. **Plates.** Black and white (half-tone) prints should be unmounted, glossy with moderate contrast. They should be labelled lightly on the back with author’s name, plate number and orientation. Captions should be typed on a separate sheet. A carefully chosen photograph can greatly help the reader and often save lengthy descriptive paragraphs. Do not submit photographs for sake of embellishment only.

5. **Abbreviations,** especially to initial letters, should be used sparingly and should always be explained at the first occurrence. [Authors should remember that abbreviations with which they are familiar may be unknown to other readers.] Abbreviations and other conventions (e.g. capitals, italics, symbols) should be used consistently throughout a paper.

6. **Units of measurement.** Metric units are strongly preferred and must be given as equivalents if other units are used. The form \( m^3 \text{ ha}^{-1} \) is preferred, though spelling out in full, ‘cubic metres per hectare’, will be accepted. S.I. units should be used wherever they are appropriate to the scale of the work reported.

7. **Summary.** Each article should be preceded by a summary, which should not normally exceed 3 per cent of the length of the text. The summary should give the main results and conclusions in simple, factual statements; it should be self-contained without reference to the main text.

8. **References.** The name of the author(s) of the work referred to and the year of publication should be cited in the text [e.g. Jones (1945); Smith and Jones, (1975)]. Use the first author’s name followed by *et al.* throughout if there are three or more authors. List all references cited at the end of the paper in alphabetical order of authors. For *books* the title should be underlined (for printing in italics); for *papers* in journals or series the name of the journal or series should be underlined. [The guiding principle in determining which part of the reference to underline is that it is that part which, after the author’s name, is likely to be most useful for finding the work in a library.] Both first and last page numbers should be given. If a work (e.g. a thesis) is unpublished, the fact should be stated. Abbreviations of titles of periodicals should conform with those in the BIOSIS Previews® Database but, if in doubt, do not abbreviate. Errors in the references will normally result in delay in publication.

9. **Proofs.** Page proofs only will be sent to the author responsible for checking them. Typescripts will not be sent. Corrected proofs should be returned to the editor forthwith. All misprints should be corrected, but the author is asked to refrain, if possible, from making any other alterations. Such alterations may be disallowed and in any case where they are allowed the author may be held responsible for the cost of making them.

10. **Copyright.** It is a condition of publication in the Journal that authors assign copyright to the Institute of Chartered Foresters. This ensures that requests from third parties to reproduce articles are handled efficiently and consistently and will also allow the article to be as widely disseminated as possible. In assigning copyright, Authors may use their own material in other publications provided that the Journal is acknowledged as the original place of publication, and Oxford University Press is notified in writing and in advance.

11. **Offprints.** Twenty-five offprints of each paper (but not of reviews, letters, etc.) are supplied free to the author(s). Additional offprints may be bought at standard rates if ordered at the time when proofs are returned.
