

**Compact Heat Exchangers – Analysis,
Design and Optimization using FEM
and CFD Approach**

WILEY-ASME PRESS SERIES LIST

Primer on Engineering Standards: Expanded Textbook Edition	Greulich	April 2018
Robust Adaptive Control for Fractional-Order Systems with Disturbance and Saturation	Chen	December 2017
Stress in ASME Pressure Vessels, Boilers, and Nuclear Components	Jawad	October 2017
Robot Manipulator Redundancy Resolution	Zhang	October 2017
Combined Cooling, Heating, and Power Systems: Modeling, Optimization, and Operation	Shi	August 2017
Applications of Mathematical Heat Transfer and Fluid Flow Models in Engineering and Medicine	Dorfman	February 2017
Bioprocessing Piping and Equipment Design: A Companion Guide for the ASME BPE Standard	Huitt	December 2016
Geothermal Heat Pump and Heat Engine Systems: Theory and Practice	Chiasson	September 2016
Nonlinear Regression Modeling for Engineering Applications	Rhinehart	September 2016
Fundamentals of Mechanical Vibrations	Cai	May 2016
Introduction to Dynamics and Control of Mechanical Engineering Systems	To	March 2016

Compact Heat Exchangers – Analysis, Design and Optimization using FEM and CFD Approach

C. Ranganayakulu
Aeronautical Development Agency
Bangalore, India

K.N. Seetharamu
PES University
Bangalore, India

This Work is a co-publication between ASME Press and John Wiley & Sons Ltd.

Contents

Preface *xiii*

Series Preface *xv*

1	Basic Heat Transfer	1
1.1	Importance of Heat Transfer	1
1.2	Heat Transfer Modes	2
1.3	Laws of Heat Transfer	3
1.4	Steady-State Heat Conduction	4
1.4.1	One-Dimensional Heat Conduction	5
1.4.2	Three-Dimensional Heat Conduction Equation	7
1.4.3	Boundary and Initial Conditions	10
1.5	Transient Heat Conduction Analysis	11
1.5.1	Lumped Heat Capacity System	11
1.6	Heat Convection	13
1.6.1	Flat Plate in Parallel Flow	14
1.6.1.1	Laminar Flow Over an Isothermal Plate	14
1.6.1.2	Turbulent Flow over an Isothermal Plate	16
1.6.1.3	Boundary Layer Development Over Heated Plate	17
1.6.2	Internal Flow	18
1.6.2.1	Hydrodynamic Considerations	19
1.6.2.2	Flow Conditions	19
1.6.2.3	Mean Velocity	20
1.6.2.4	Velocity Profile in the Fully Developed Region	21
1.6.3	Forced Convection Relationships	23
1.7	Radiation	28
1.7.1	Radiation – Fundamental Concepts	30
1.8	Boiling Heat Transfer	35
1.8.1	Flow Boiling	36
1.9	Condensation	38
1.9.1	Film Condensation	39
1.9.2	Drop-wise Condensation	39
	Nomenclature	40
	Greek Symbols	42
	Subscripts	42
	References	43

2	Compact Heat Exchangers	45
2.1	Introduction	45
2.2	Motivation for Heat Transfer Enhancement	46
2.3	Comparison of Shell and Tube Heat Exchanger	48
2.4	Classification of Heat Exchangers	49
2.5	Heat Transfer Surfaces	51
2.5.1	Rectangular Plain Fin	52
2.5.2	Louvred-Fin	52
2.5.3	Strip-Fin or Lance and Offset Fin	53
2.5.4	Wavy-Fin	53
2.5.5	Pin-Fin	53
2.5.6	Rectangular Perforated Fin	54
2.5.7	Triangular Plain Fin	54
2.5.8	Triangular Perforated Fin	54
2.5.9	Vortex Generator	55
2.6	Heat Exchanger Analysis	56
2.6.1	Use of the Log Mean Temperature Difference	58
2.6.1.1	Parallel-Flow Heat Exchanger	59
2.6.1.2	Counter-Flow Heat Exchanger	62
2.6.2	Effectiveness-NTU Method	65
2.6.3	Effectiveness-NTU Relations	69
2.6.4	Evaluation of Heat Transfer and Pressure Drop Data	73
2.6.4.1	Flow Properties and Dimensionless Numbers	73
2.6.4.2	Data Curves for j and f	75
2.7	Plate-Fin Heat Exchanger	77
2.7.1	Description	77
2.7.2	Geometric Characteristics	78
2.7.3	Correlations for Offset Strip Fin (OSF) Geometry	81
2.8	Finned-Tube Heat Exchanger	81
2.8.1	Geometrical Characteristics	82
2.8.2	Correlations for Circular-Finned-Tube Geometry	84
2.8.3	Pressure Drop	85
2.8.4	Correlations for Louvred Plate-Fin Flat-Tube Geometry	86
2.8.5	Louvre-Fin-Type Flat-Tube Plate-Fin Heat Exchangers	90
2.8.5.1	Geometric Characteristics	91
2.8.5.2	Correlations for Louvre Fin Geometry	93
2.9	Plate-Fin Exchangers Operating Limits	93
2.10	Plate-Fin Exchangers – Monitoring and Maintenance	94
2.10.1	Advantage	95
2.10.2	Disadvantages	95
	Nomenclature	95
	Greek Symbols	97
	Subscripts	98
	References	98

3	Fundamentals of Finite Element and Finite Volume Methods	101
3.1	Introduction	101
3.2	Finite Element Method	101
3.2.1	Finite Element Form of the Conduction Equation	103
3.2.2	Elements and Shape Functions	104
3.2.3	Two-Dimensional Linear Triangular Elements	109
3.2.3.1	Area Coordinates	112
3.2.4	Formulation for the Heat Conduction Equation	114
3.2.4.1	Variational Approach	115
3.2.4.2	Galerkin Method	118
3.2.5	Requirements for Interpolation Functions	119
3.2.6	Plane Wall with a Heat Source – Solution by Quadratic Element	128
3.2.7	Two-Dimensional Plane Problems	130
3.2.7.1	Triangular Elements	131
3.2.8	Finite Element Method-Transient Heat Conduction	141
3.2.8.1	Galerkin Method for Transient Heat Conduction	142
3.2.9	Time Discretization using the Finite Element Method	145
3.2.10	Finite Element Method for Heat Exchangers	146
3.2.10.1	Governing Equations	146
3.2.10.2	Finite Element Formulation	148
3.3	Finite Volume Method	164
3.3.1	Navier–Stokes Equations	165
3.3.1.1	Conservation of Momentum	168
3.3.1.2	Energy Equation	171
3.3.1.3	Non-Dimensional Form of the Governing Equations	173
3.3.1.4	Forced Convection	174
3.3.1.5	Natural Convection (Buoyancy-Driven Convection)	175
3.3.1.6	Mixed Convection	177
3.3.1.7	Transient Convection – Diffusion Problem	177
3.3.2	Boundary Conditions	178
	Nomenclature	178
	Greek Symbols	179

Preface

The importance of compact heat exchangers (CHEs) has been recognized in aerospace, automobile, process plants and other industries for 60 years or more. This importance is further demanded in the aerospace sector, with its requirements such as weight optimization, high compactness and high performance leading to the demand for cost-effective design and manufacturing techniques. While several books dealing mainly with heat exchangers have been published worldwide in English, no complete source of design data can be found on the many important aspects of CHE design, which an engineer can use as a comprehensive source of generalized design data for the most widely used fin surfaces. One of the first comprehensive books on the design of CHEs using primarily air or gases as working fluid was first published by Kays and London in 1967 with the SI unit edition appearing in 1984. This book is still widely used worldwide, with most design data referenced from 1967, for fin data experimentally generated. Because manufacturing technology has progressed significantly since the beginning of 21st century, many new and sophisticated forms of heat transfer surfaces have been used in CHEs. The design data for these surfaces is limited in the open literature and most of the aerospace industry CHE manufacturers keep their design data proprietary.

This book is an attempt to bring new concepts of design data generation numerically, which is cost-effective and more generic design data, which can be used more effectively by design and practising engineers. It is hoped that researchers and designers will find it of value, as well as academics and graduate students. The specialty of this book is numerical design data based on FEM and CFD. Numerical methods and techniques are introduced for estimation of performance deterioration such as flow non-uniformity, temperature non-uniformity and longitudinal heat conduction effects using FEM for CHE unit level and Colburn j factor and Fanning friction f factor data generation methods for various types of CHE fins using CFD at fin level. In addition, worked examples for single- and two-phase flow CHEs are provided, and the complete qualification tests are given for CHEs used in aerospace applications, typically, which are unavailable in open literature, as these are provided only in some standards. In order to keep the book to a reasonable size, some topics of relevance to CHE applications, which are available in other accessible books, such as *Compact Heat Exchangers* by Kays and London, 3rd edition, McGraw–Hill Book Company, New York [1984], *Compact Heat Exchangers* by J.E Hesselgreaves, Pergamon [2001] and *Plate-fin Heat Exchangers Guide to their Specification and Use* by M.A. Taylor, HTFS, UK, [1987] have been omitted, in particular those of transients (for regenerators), the effect of temperature dependent fluid properties and analytical solutions for flow in tubes.

The first three chapters of the book deal with the fundamentals of heat transfer, heat exchangers and numerical techniques of FEM and CFD. The application of FEM to compact heat exchangers is presented in Chapter 4, where heat conduction effects using FEM on evaporator tubes in pool boiling is also provided. Chapter 5 gives the complete information about CFD analysis of various fins of CHEs for generation of Colburn j and Fanning friction f factor correlations. In addition, the endurance life estimation of a typical CHE is also provided, based on FEM and CFD techniques. The basic concepts of sizing and design methodologies are provided for CHEs in Chapter 6 along with several worked examples for direct transfer type heat exchangers, boiling and condenser heat exchangers. Finally, in Chapter 7, the construction details and several qualification tests are presented for qualification of CHEs especially for aerospace applications.

Many people have helped either directly or indirectly throughout the preparation of this book. Primarily, the authors are greatly indebted to their family members Lakshmi and Puji Krimmel (Dr C. Ranganayakulu) and Uma, Anil, Vani and Samartha Shastry (Prof. K.N. Seetharamu) for their unfailing support and patience during the development of this book. In particular, the authors wish to thank Aeronautical Development Agency and PES University, Bangalore for allowing us to work on this book. Dr C Ranganayakulu acknowledges his colleagues Mr R. Swaminathan, Mr A. Panigrahi and Mr Shahbaz Ulum for their support; in particular, Prof. Stephan Kabelac, Prof. Dieter Gorenflo, Prof. P. Nithiarasu and Prof. V. Vasudeva Rao for their guidance and encouragement; as well as Dr Saik L. Ismail, Dr A.C. Bhaskar, Dr R. Balasundar Rao, Dr M. Amaranatha Raju and Mr K.V. Ramana Murthy for their PhD works and Mr M.H. Prasad, Mr B. Mahesh and Mr C. Deepak Varma for book documentary works. Prof. Seetharamu also acknowledges Dr H.W. Lee, Dr Anvar Mydin, Dr G.A. Quadir, Dr Z.A. Zainal and in particular Dr T.R. Seetharam, Dr V. Krishna and Dr K.N.B. Murthy for their encouragement to write this book. Finally, the authors would like to thank the staff of John Wiley & Sons Ltd, UK, in particular Ms Anita Yadav and Mr Paul Beverley, for their constant support and encouragement during the preparation of the book.

K.N. Seetharamu*

Series Preface

The Wiley-ASME Press Series in Mechanical Engineering brings together two established leaders in mechanical engineering publishing to deliver high-quality, peer-reviewed books covering topics of current interest to engineers and researchers worldwide.

The series publishes across the breadth of mechanical engineering, comprising research, design and development, and manufacturing. It includes monographs, references and course texts.

Prospective topics include emerging and advanced technologies in Engineering Design; Computer-Aided Design; Energy Conversion & Resources; Heat Transfer; Manufacturing & Processing; Systems & Devices; Renewable Energy; Robotics; and Biotechnology.
