Corrigendum

Familial Mediterranean fever in children: the expanded clinical profile

Clinical profile page 312, first column.
Line 4 (below Table 4), it was stated that ‘five children developed the protracted febrile myalgia syndrome’, the correct number is four.
Paragraph should commence: Fifty-one children not fifty-two.

Clinical profile page 312, second column
It was stated that ‘... however, in one patient, exercise-induced insertional activity was detected.’ This should be corrected to: ‘... however, one patient had results consistent with a diagnosis of post-infectious childhood myositis1 and also had a raised CPK level. CPK was determined in 26 other patients...’
