Animal Index

This index is organized primarily by common names as well as orders and families. Scientific names are given where specific species are meant rather than the generic term for a group of animals such as bears, bushbabies, or barnacles. The latter are also used for most groups for which data on play are not given in this book. For species lacking well-known or accepted common names the scientific names are listed under the major group (e.g., cockroaches)

- Aardvark (ant bear, *Orycteropus afer*), 193, 197
Acipenseridae (sturgeons), 354, 355
