The MIT Press

Series Foreword

Computational neuroscience is an approach to understanding the development and function of nervous systems at many different structural scales, including the biophysical, the circuit, and the system levels. Methods include theoretical analysis and modeling of neurons, networks, and brain systems and are complementary to empirical techniques in neuroscience. Areas and topics of particular interest to this book series include computational mechanisms in neurons, analysis of signal processing in neural circuits, representation of sensory information, system models of learning and memory. Further topics of interest include the intersection of computational neuroscience with engineering, from representation and dynamics, to observation and control.

Library of Congress Cataloging-in-Publication Data

Names: Poggio, Tomaso, author. | Anselmi, Fabio, author.

Title: Visual cortex and deep networks : learning invariant representations /
Tomaso A. Poggio and Fabio Anselmi.

Description: Cambridge, MA : MIT Press, [2016] | Series: Computational
neuroscience | Includes bibliographical references and index.

Identifiers: LCCN 2016005774 | ISBN 9780262034722 (hardcover : alk. paper)

Subjects: LCSH: Visual cortex. | Vision. | Neural networks (Neurobiology) |
Perceptual learning. | Computational neuroscience.

Classification: LCC QP383.15 .P64 2016 | DDC 612.8—dc23 LC record available at
