*This book is dedicated to Carl Curtis Duzen, 1937–2020. Carl was an exceptionally accomplished physics teacher. He loved teaching, he loved his students, and he loved physics. With a twinkle in his eye, he would share that he had taught Kobe Bryant about projectile motion. His lessons were always clear, correct, and often wrapped in a bit of humor. To share his experience and knowledge, Carl got us involved in traveling around Pennsylvania doing workshops for fellow teachers as part of the AAPT/PTRA Program. The seed that grew into this book is from the materials developed to support these workshops.*
