drive to the end of the road, at Hamningberg. This used to be a major fishing center, but now no one lives here during the winter. Although several pre–World War II houses remain, the fish factories, which previously crowded the shoreline in the village up to the late 1970s, have mostly collapsed and been removed.

**Grid ref.** VD 1345 2205, 1:50,000 map sheet Vardo 2535 IV, Edition 3-NOR. GEC 70°29′12″N, 30°40′37″E.

**Description.** Steeply dipping to vertical, very thick-bedded, dark-gray turbidites can be seen in road cuts and beach exposures on the road toward Sandfjord. Graded bedding in sets from a few centimeters to over 1 m in thickness (in amalgamated beds) is present along with parallel horizontal-lamination at the tops of the graded units (Siedlecka and Roberts, 1992).

**ACNOWLEDGMENTS**

We express our unbounded gratitude to Arild and Jorunn Pettersen, and their sons, of Skippagurra Vest (Tana, Finnmark) for their hospitality during a dry run of the excursion in 2007, during the International Geoscience Programme (IGCP) Project 512 and the 33rd International Geological Congress (IGC) excursion itself in 2008, and in very many of the previous summers since 1990.

The staff at Europcar Norway (Kirkenes) are thanked for their patience as the size of the original excursion changed daily and for sponsoring the car transport used during the excursion. Else-Marie Seim, headmistress of the school at Seida, is very sincerely thanked for allowing the excursion participants to use the school facilities in 2008. The Tana Kommune office at Tana Bru, especially Teresa Nyborg, is thanked for their help organizing the boat rides, and Mia Krogh at Varangerbotn Museum is thanked for providing information about the Pomor trade. Jostein Borresen, of Indre Torhop, is thanked for providing basic dykes from East Finnmark: Stratigraphic and structural implications: Scottish Journal of Geology, v. 12, p. 51–65, doi:10.1144/sj12010051.
