

ACKNOWLEDGMENTS

The members of the Rain Forest Seminar are grateful to the University of California's nine-campus Humanities Research Institute (HRI) at Irvine for funding six months of collaborative research on rain forest images and their practical effects. We thank HRI directors Patricia O'Brien, Steven Mailloux, and David Theo Goldberg for their help before, during, and after our residence at the institute during spring 2000. We are similarly indebted to the HRI staff as well as our graduate research assistants Lyman Hong and Jacqueline Scoones for their energy and patience.

Though brief, our journey to the not-quite-rain forest of the Yucatán played a decisive role in shaping both this book and the larger seminar experience that underlies it. For this reason, we are particularly grateful to the colleagues who helped us in our preparations. We thank Professors Jaime Rodríguez, Rob Patch, and Steven Topik for sharing their expertise with us. We are deeply grateful to Mike Baker and Teresa Martelon for opening their impressive Yucatán vacation home to us. We were equally fortunate to enjoy the friendship and professional guidance of Gonzalo Merediz and Marcos Lazcano Barrera of the Sian Ka'an Biosphere Reserve. We also thank Cancún environmental activist Araceli Domínguez along

with our guides at the Punta Laguna spider monkey reserve (Ricardo and Eulogio Canul), Cancún archaeological museum (Guillermo Ahuja O.), and Caste War Museum at Tihosuco for greatly enriching our field experience.

The visitors who helped us think through the essays that began emerging once we returned to Irvine also deserve special mention. Francis E. Putz and Claudia Romero, conservation biologists committed to biological preservation and social justice, allowed us to revisit our own assumptions from the vantage point of the natural sciences. As a science correspondent for National Public Radio, David Baron was able to provide a different, but equally valuable perspective on our aims and writing methods. Jenny Price helped us to begin thinking about writerly issues early on in this book's conception, and we thank her for her ongoing assistance to us as individuals as well as a group.

We owe much to the colleagues who filled in for us on our home campuses during the time we were at Irvine. Our debts to our families are even greater, and we thank them warmly for their patience, good humor, and support. We also extend special thanks to the people in the forest areas where we have done extended research. Each and every chapter in this book reflects their generous help.

This book's location within Duke's *New Ecologies for the Twenty-First Century* series is a source of satisfaction. We thank the series editors, Arturo Escobar and Dianne Rocheleau, as well as our initial manuscript reviewers for their many useful suggestions. We also thank our editors, Valerie Millholland and Pam Morrison, for their help throughout the publication process.

Finally, we are grateful to each other for a deeply exciting exchange of ideas and experiences—an academic ideal far too seldom realized in practice. Scott Fedick deserves special thanks for making possible our trip to the Yucatán, but each of the seminar participants made unique intellectual and personal contributions to the collective effort. “Your group gets on so well!” people often told us. “You really seem to enjoy each other’s company.” We did enjoy each other, and we learned much from our time together. Our hope is that the reader will find similar profit and excitement in this book.
