

EMU NOTES IN
MINERALOGY

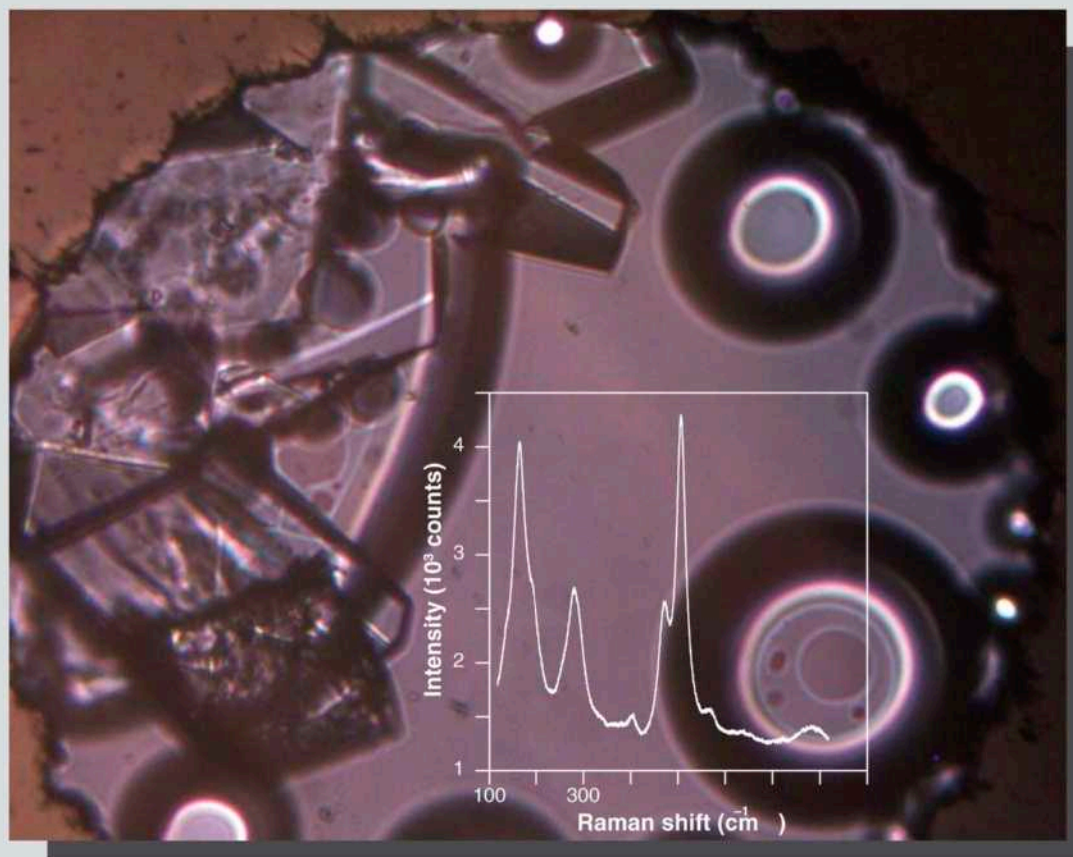

12

Raman Spectroscopy

applied to Earth Sciences and Cultural Heritage

Editors

J. DUBESSY, M.-C. CAUMON and F. RULL

EUROPEAN MINERALOGICAL UNION
NOTES IN MINERALOGY

Series editor: Giovanni Ferraris

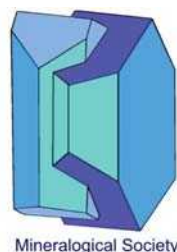

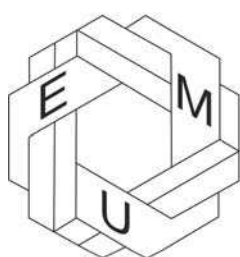

Volume 12

**APPLICATIONS OF RAMAN
SPECTROSCOPY TO EARTH
SCIENCES AND CULTURAL
HERITAGE**

UNIVERSITY TEXTBOOK

Edited by

J. Dubessy, M.-C. Caumon and F. Rull

Published by the European Mineralogical Union and the
Mineralogical Society of Great Britain & Ireland
London, 2012

The publication of this textbook and the organization of the related school were sponsored by the European Mineralogical Union

EMU Notes in Mineralogy

A series published under the auspices of the European Mineralogical Union (EMU) in connection with the *EMU Schools meetings*.

Initiator of the EMU Schools and the EMU Notes in Mineralogy
Giovanni Ferraris, Torino, President of the EMU 1992–1996

Series Editor: Giovanni Ferraris, Torino (previous editors: Tamás G. Weiszbürg and Gábor Papp, Budapest)

Editor of this Volume
J. Dubessy, M.-C. Caumon, Université de Lorraine, Nancy, France, and F. Rull, Universidad de Valladolid, Spain

Technical Editor and Indexer: Kevin Murphy, London

Front cover design: Michel H. Guay

Executive Committee of the EMU (2008–2012)
Roberta Oberti, Pavia (President), Peter Ulmer, Zurich (Past-President), Christian Chopin, Paris (1st Vice President), F. Gervilla, Granada (2nd Vice President), Herta Effenberger, Vienna (Secretary), Ernst Burke, The Netherlands (Treasurer)

On the front cover: Metastable assemblage of albite crystals, silicate melt globules and aqueous fluid at 600°C, 1.06 GPa in the sample chamber of a hydrothermal diamond-anvil cell: bulk composition H₂O + 54 wt.% NaAlSi₃O₈, zircon chip added as Raman spectroscopic pressure sensor; the sample chamber diameter is ~ 400 μm. The editors thank C. Schmidt, GFZ for providing the photograph and Raman spectrum.

| 12 | 2012 | J. Dubessy M.-C. Caumon F. Rull | <i>Applications of Raman Spectroscopy to Earth Sciences and Cultural Heritage</i> |

Copies of the EMU Notes (volumes 1–7) are distributed in Europe by the larger member societies of the European Mineralogical Union:

Società Italiana di Mineralogia e Petrologia:
www.socminpet.it

Mineralogical Society of Great Britain & Ireland:
www.minersoc.org

Société Française de Minéralogie et de Cristallographie:
www.sfmc-fr.org

and by the Secretary of the EMU, Prof. Herta S. Effenberger:
www.univie.ac.at/Mineralogie/EMU

in America by the Mineralogical Society of America:
www.minsocam.org

Institutional orders as well as individual requests from outside Europe and America should be sent also be sent to the the Secretary of the EMU, Prof. Herta S. Effenberger:
www.univie.ac.at/Mineralogie/EMU

For volumes 8 onwards, the Mineralogical Society of Great Britain acts as co-publisher and copies may be ordered from www.minersoc.org

or from:

Contents

| | |
|---------------|----|
| Preface | XV |
|---------------|----|

| | |
|----------------|------|
| Foreword | XVII |
|----------------|------|

Chapter 1. The Raman effect and the vibrational dynamics of molecules and crystalline solids

| | |
|--|-----------|
| by FERNANDO RULL | 1 |
| 1. Introduction | 1 |
| 2. The Raman effect | 2 |
| 2.1. Elementary theory of Raman spectroscopy | 2 |
| 2.2. Raman intensity | 8 |
| 2.3. Raman band shape | 10 |
| 3. Vibrational dynamics of molecules and crystalline solids | 15 |
| 3.1. Introduction | 15 |
| 3.2. Description of vibrations | 16 |
| 3.3. Internal coordinates | 21 |
| 4. Group theory applied to numbering of vibrations | 23 |
| 4.1. Symmetry coordinates | 23 |
| 4.2. A sample application: the AB ₂ molecule | 31 |
| 5. Vibrations in crystals and lattice dynamics (phonons) | 34 |
| 5.1. Lattice dynamics: the one-dimensional case | 35 |
| 5.2. The dynamics of 3D crystals and vibrational spectroscopies | 40 |
| 5.3. Classification of the normal modes of vibration for crystals | 42 |
| 5.4. An example of the Raman-active-mode determination of a crystal | 44 |
| 6. Other Raman effects | 48 |
| 6.1. Resonance Raman spectroscopy | 48 |
| 6.2. Coherent Anti-Stokes Raman spectroscopy (CARS) | 49 |
| 6.3. Surface-enhanced Raman spectroscopy | 50 |
| 6.3.1. SERS mechanism | 51 |
| 6.3.2. Raman substrates and probes | 52 |
| 6.3.3. Applications | 52 |
| Appendix | 53 |
| 1. Representations of finite groups | 53 |
| 2. Reduction of the representation | 54 |
| Acknowledgements | 58 |
| References | 58 |

Chapter 2. Raman and fluorescence

| | |
|---|----|
| by GÉRARD PANCZER, DOMINIQUE DE LIGNY, CLÉMENT MENDOZA, MICHAEL GAFT, ANNE-MAGALI SEYDOUX-GUILLAUME and XIAOCHUN WANG | 61 |
| 1. Introduction | 61 |

| | |
|---|----|
| 2. Principle of Raman and fluorescence | 62 |
| 2.1. Raman – Theory | 62 |
| 2.2. Luminescence – Theory | 65 |
| 2.3. Luminescent centres | 66 |
| 2.4. Black body and thermal incandescence | 69 |
| 3. Different ways to reject fluorescence..... | 69 |
| 3.1. Gated Raman spectroscopy | 69 |
| 3.2. Monitoring the excitation wavelength | 71 |
| 3.3. Polarization effects | 73 |
| 3.4. Bleaching | 75 |
| 3.5. FT-Raman | 75 |
| 4. Taking advantage of simultaneous Raman and luminescence measurements | 75 |
| 4.1. <i>REE</i> and uranyl ion substitutions in powellite and irradiation-induced defect..... | 76 |
| 4.2. Thorium-induced auto irradiation in monazites and annealing | 77 |
| 4.3. Conclusions | 79 |
| References..... | 80 |

Chapter 3. Instrumentation in Raman spectroscopy: elementary theory and practice

by **JEAN DUBESSY, MARIE-CAMILLE CAUMON, FERNANDO RULL and SHIV SHARMA**

| | |
|--|-----|
| | 83 |
| 1. Introduction | 83 |
| 2. Characteristics of Raman spectra, instrument specifications and description of a Raman spectrometer | 84 |
| 2.1. Main characteristics of Raman spectra and instrument specifications..... | 84 |
| 2.2. The different elements of a Raman spectrometer..... | 86 |
| 3. Excitation sources, spectrometers and detectors | 87 |
| 3.1. Laser excitation sources | 87 |
| 3.1.1. Main types of lasers | 87 |
| 3.1.2. CW ionized gas lasers | 88 |
| 3.1.3. Gas laser | 89 |
| 3.1.4. Nd:YAG laser | 89 |
| 3.1.5. Laser diodes or semiconductor lasers | 89 |
| 3.1.6. Choice of laser excitation | 91 |
| 3.2. Rejection of different types of stray radiations | 92 |
| 3.3. Gratings used in dispersive Raman spectrometers | 94 |
| 3.3.1. The grating equation | 94 |
| 3.3.2. Angular dispersion of radiations by a grating and resolving power | 98 |
| 3.3.3. Grating efficiency | 99 |
| 3.3.4. The blaze angle | 100 |

| | |
|--|-----|
| 3.3.5. Influence of the polarization state of the incident radiation | 100 |
| 3.3.6. Other types of gratings | 101 |
| 3.4. Different types of dispersive spectrometers | 104 |
| 3.4.1. Czerny-Turner spectrometers | 104 |
| 3.4.2. Other types of spectrometers | 107 |
| 3.5. The detectors | 108 |
| 3.5.1. A brief history of detectors used in Raman spectroscopy..... | 108 |
| 3.5.2. Detector parameters and sources of noise | 108 |
| 3.5.3. Read-out noise | 109 |
| 3.5.4. Background shot noise | 110 |
| 3.5.5. Charge-coupled devices (CCDs)..... | 111 |
| 3.5.6. Other detectors | 112 |
| 3.6. Sampling systems | 113 |
| 3.6.1. Macroscopic sampling: conventional 90° or 180° geometries | 113 |
| 3.6.2. Remote sampling system: fibre optic probes | 113 |
| 3.6.3. Microspectrometers and spatial resolution with confocal and non-confocal Raman microscope | 114 |
| 3.6.4. Axial resolution | 114 |
| 3.6.5. Lateral resolution of conventional microscope | 116 |
| 3.6.6. Lateral resolution of a confocal microscope | 117 |
| 3.6.7. Sample heating by laser focus | 117 |
| 3.6.8. Tip-enhanced Raman Spectroscopy (TERS) | 118 |
| 3.6.9. Raman mapping and imaging | 118 |
| 3.6.10. Polarization measurements | 119 |
| 4. Calibrations..... | 119 |
| 4.1. Raman shift: determination, accuracy, precision, calibration | 119 |
| 4.1.1. Performances required for Raman-shift determination | 119 |
| 4.1.2. Linear dispersion of Czerny-Turner spectrometers | 120 |
| 4.1.3. Instrumental line profile | 120 |
| 4.1.4. Spectral resolution | 122 |
| 4.2. Radiometric calculations applied to spectrometers | 124 |
| 4.2.1. Requirements for a luminous spectrometer | 124 |
| 4.2.2. Optimum coupling conditions | 125 |
| 4.2.3. Optical coupling of the microscope with the spectrometer | 125 |
| 4.2.4. Flux of Raman photons collected by the entrance optics of the spectrometer | 127 |
| 4.2.5. Flux of Raman photons reaching the detector..... | 127 |
| 4.3. Experimental calibrations | 128 |
| 4.3.1. Wavelength calibrations | 128 |
| 4.3.2. Raman shift wavenumber calibration of a single Czerny-Turner spectrometer | 128 |
| 4.3.3. Laser wavelength calibration | 130 |

| | |
|--|-----|
| 4.3.4. Intensity calibration | 131 |
| 4.3.5. Spectral resolution | 133 |
| 4.3.6. Confocality | 135 |
| 5. Raman spectrometers: from the laboratory to the field..... | 136 |
| 5.1. Field applications | 143 |
| 5.2. <i>In situ</i> detection of organics in the field..... | 149 |
| 6. Coupling with other techniques | 149 |
| 6.1. Combined LIBS and Raman instrument..... | 150 |
| 6.2. Combined time-resolved (TR) Raman-laser-induced native fluorescence (LINF)-LIBS instrument | 157 |
| 6.3. Raman instruments for ocean studies | 158 |
| Acknowledgements..... | 159 |
| Definitions..... | 159 |
| References..... | 165 |

Chapter 4. Theoretical modelling of Raman spectra

| | |
|---|-----|
| by RAZVAN CARACAS and EMA BOBOCIOIU | 173 |
| 1. Introduction | 173 |
| 2. Lattice dynamics and phonons..... | 174 |
| 3. Phonon calculations using <i>ab initio</i> methods | 180 |
| 3.1. Density functional theory | 180 |
| 3.2. Density functional perturbation theory | 181 |
| 3.3. Perturbation expansion | 181 |
| 3.4. From mixed perturbations to physical properties..... | 183 |
| 4. Raman tensors and Raman spectra | 184 |
| 5. Examples | 186 |
| 6. The WURM project | 187 |
| Acknowledgements..... | 189 |
| References..... | 189 |

Chapter 5. Raman data analysis

| | |
|--|-----|
| by NICOLAE TARCEA and JURGEN POPP | 193 |
| 1. Introduction | 193 |
| 2. Data acquisition and storage | 194 |
| 2.1. Data acquisition..... | 194 |
| 2.2. Data storage organization | 196 |
| 2.2.1. Raman spectra libraries | 196 |
| 2.2.2. Files with header metadata..... | 197 |
| 2.2.3. Relational databases | 198 |
| 2.2.4. Graph databases | 199 |
| 3. Pre-processing of Raman spectra..... | 199 |
| 3.1. Spike removal | 200 |
| 3.2. Spectra smoothing/denoising | 200 |

| | |
|---|-----|
| 3.3. Background correction | 201 |
| 3.4. Normalization | 202 |
| 3.5. Spectral and intensity (re-)calibration..... | 202 |
| 4. Chemometry methods for Raman spectroscopy | 206 |
| 4.1. Multivariate calibration algorithms..... | 207 |
| 4.1.1. Multiple linear regression (MLR) | 208 |
| 4.1.2. Principal component analysis (PCA) | 208 |
| 4.1.3. Principal component regression (PCR) and partial least-squares regression (PLS) | 210 |
| 4.2. Classification methods..... | 212 |
| 4.3. Cluster analysis | 214 |
| References..... | 217 |

Chapter 6. Optical cells with fused silica windows for the study of geological fluids

| | |
|---|-----|
| by I-MING CHOU | 227 |
| 1. Introduction | 227 |
| 2. High-pressure optical cell (HPOC) | 228 |
| 2.1. Construction of HPOC | 228 |
| 2.2. Sample loading and pressurizing procedures | 228 |
| 2.3. Heating-cooling stages (USGS, INSTEC, Linkam) | 231 |
| 2.4. Applications (examples) | 234 |
| 2.4.1. Solubility and diffusion of methane gas in water | 234 |
| 2.4.2. Solubility of methane hydrate in water | 236 |
| 2.4.3. Determination of methane vapour pressure with measured Raman shift..... | 238 |
| 2.4.4. Other applications | 240 |
| 3. Fused silica capillary capsules (FSCCs) | 241 |
| 3.1. Construction of FSCCs | 241 |
| 3.2. Applications..... | 241 |
| 3.2.1. Calibration standards..... | 241 |
| 3.2.2. Other applications | 242 |
| 4. Summary..... | 243 |
| Acknowledgements..... | 245 |
| References..... | 245 |

Chapter 7. The Hydrothermal Diamond Anvil Cell (HDAC) for Raman spectroscopic studies of geological fluids at high pressures and temperatures

| | |
|--|-----|
| by CHRISTIAN SCHMIDT and I-MING CHOU | 249 |
| 1. Introduction | 249 |
| 2. Construction | 250 |
| 3. Temperature measurement | 252 |

| | |
|---|-----|
| 4. Pressure measurement | 254 |
| 4.1. Overview | 254 |
| 4.2. Raman bands | 256 |
| 4.3. Optical fluorescence lines | 260 |
| 4.4. Phase-transition temperatures | 264 |
| 5. Raman spectroscopic studies of geological fluids using diamond anvil cells..... | 266 |
| Acknowledgements..... | 271 |
| References..... | 271 |

Chapter 8. Raman Spectroscopy of Gases, Water and other Geological Fluids

by **VALENTIN GARCIA-BAONZA, FERNANDO RULL and JEAN DUBESSY**..... 279

| | |
|---|-----|
| 1. Introduction | 279 |
| 2. Raman spectroscopy of gases | 280 |
| 2.1. Raman scattering cross-section of gases and gas-phase composition calculation | 280 |
| 2.2. Detection limit of gas analysis by Raman spectroscopy | 283 |
| 2.2.1. Detection limit with a Raman microspectrometer..... | 283 |
| 2.2.2. Detection limit of gas using a conventional spectrometer | 285 |
| 2.3. Variation of the Raman scattering cross-section with temperature | 285 |
| 2.4. Effect of density or pressure on Raman scattering cross-sections | 285 |
| 3. Raman spectroscopy of water and aqueous solutions | 288 |
| 3.1. Hydrogen bonding and water structure..... | 290 |
| 3.2. Structural vs. spectroscopic models | 294 |
| 3.3. Temperature and pressure effects | 301 |
| 3.4. Aqueous solutions and hydrophobic effects | 305 |
| 4. The H ₂ O-gas systems | 310 |
| 4.1. Gas clathrates | 310 |
| 4.2. H ₂ O-gas mixture at high temperatures and pressures | 311 |
| 5. Applications of Raman spectroscopy to fluid geochemistry | 313 |
| Acknowledgements..... | 314 |
| References..... | 314 |

Chapter 9. Raman Spectroscopy of Silicate Glasses and Melts in Geological Systems

by **STÉPHANIE ROSSANO and BJORN MYSEN** 321 |

| | |
|--|-----|
| 1. Introduction | 321 |
| 2. What is a glass? | 322 |
| 2.1. Melts and melting | 322 |
| 2.2. Transformation of melt to glass | 325 |
| 3. Spectrum analysis..... | 328 |

| | |
|--|-----|
| 3.1. Pre-treatment of Raman spectra of glasses: background subtraction, temperature and frequency corrections, normalization | 329 |
| 3.2. Fingerprinting | 333 |
| 3.3. Statistical analysis of Raman spectra | 334 |
| 3.3.1. Gaussian decomposition | 334 |
| 3.3.2. Principal component analysis | 337 |
| 3.4. Is Raman spectroscopy a quantitative tool? | 338 |
| 4. Examples | 339 |
| 4.1. Q^n species | 339 |
| 4.1.1. Q^4 species | 339 |
| 4.1.2. Q^3 species | 340 |
| 4.1.3. Q^2 species | 341 |
| 4.1.4. Q^1 species | 342 |
| 4.1.5. Q^0 species | 343 |
| 4.2. Other tetrahedrally-coordinated cations | 344 |
| 4.2.1. Aluminium | 344 |
| 4.2.2. Phosphorus | 347 |
| 4.2.3. Ferric iron | 349 |
| 4.2.4. Titanium | 349 |
| 4.3. Volatiles in glass (C-O-H-N-S and halogens) | 350 |
| 4.3.1. HO, H ₂ O, H ₂ | 351 |
| 4.3.2. C-bearing species in the COH system | 353 |
| 4.3.3. N-bearing species in the NOH system..... | 355 |
| 4.3.4. Sulphur species..... | 357 |
| 4.3.5. Halogen-containing glass | 357 |
| 5. Perspectives | 358 |
| References..... | 358 |

Chapter 10. Raman spectroscopy at high pressure and temperature for the study of the Earth's mantle and planetary minerals

| | |
|--|-----|
| by BRUNO REYNARD, GILLES MONTAGNAC and HERVÉ CARDON | 367 |
| 1. Introduction | 367 |
| 2. Experimental setups for HP-HT Raman spectroscopy | 368 |
| 2.1. Raman spectroscopy at high temperature | 368 |
| 2.2. Raman spectroscopy at high pressure..... | 371 |
| 2.3. Combining high pressure and high temperatures | 372 |
| 3. Pressure- and temperature-induced variations of vibrational frequencies | 373 |
| 3.1. Anharmonic shifts | 373 |
| 3.2. Applications to vibrational modelling of thermodynamic properties from HP-HT measurements | 377 |
| 3.3. Applications to pressure calibration in natural and experimental systems | 379 |

| | |
|--|-----|
| 4. Phase transitions | 380 |
| 4.1. Irreversible and metastable phase transitions | 380 |
| 4.2. Reversible transformation | 382 |
| 5. Concluding remarks | 384 |
| Acknowledgements..... | 384 |
| References..... | 384 |

Chapter 11. Raman spectroscopy in biogeology and astrobiology

| | |
|--|-----|
| by ISABELLE DANIEL and HOWELL G.M. EDWARDS | 391 |
| 1. Introduction | 391 |
| 2. Historical astrobiology | 392 |
| 2.1. Astrobiology <i>versus</i> Exobiology..... | 392 |
| 3. Advantages of Raman spectroscopy for the characterization of biomolecules and biogeological molecules | 394 |
| 4. Database of key biomarkers..... | 397 |
| 5. Laboratory experiments | 398 |
| 5.1. Quantitative Raman spectroscopic measurement of microbial metabolic activity..... | 398 |
| 5.2. Raman spectroscopy for probing live cells | 400 |
| 5.3. Measurements of minute amounts of biological and biotic products | 402 |
| 5.4. Raman microfluidic platforms..... | 404 |
| 6. Raman instrumentation in biogeology and astrobiology..... | 406 |
| 6.1. Scanning confocal Raman spectroscopy for laboratory experiments | 406 |
| 6.2. Miniaturization of Raman instruments | 406 |
| 6.3. Remote Raman spectroscopy for field work..... | 407 |
| 7. Space exploration using Raman spectroscopy..... | 407 |
| 7.1. Raman spectroscopy in the ExoMars mission | 407 |
| 7.2. Experiments on the International Space Station..... | 409 |
| References..... | 410 |

Chapter 12. Application of Raman spectroscopy to the study of graphitic carbons in the Earth Sciences

| | |
|--|-----|
| by OLIVIER BEYSSAC and MICHELE LAZZERI..... | 415 |
| 1. Introduction | 415 |
| 2. The Raman spectrum of graphitic carbons: theory | 417 |
| 2.1. Why are the D and 2D peaks ‘unique’? | 418 |
| 2.2. Basic concepts of quantum mechanics and perturbation theory | 420 |
| 2.3. Electronic gap and resonant Raman | 423 |
| 2.4. Fourth-order perturbation and double resonant Raman | 423 |
| 2.5. Electronic structure and phonon dispersion in graphene/graphite | 424 |
| 2.6. Double resonance in graphite | 426 |

| | |
|--|-----|
| 2.7. Attribution of the Raman peaks | 428 |
| 2.8. Shape and width of the 2D peak..... | 429 |
| 2.9. Intensity of the D peak and the Tuinstra-Koenig relation | 430 |
| 3. Methodology: characterizing graphitic carbons using Raman microspectroscopy | 431 |
| 3.1. Raman spectroscopy is a surface analysis in the case of graphitic carbons | 432 |
| 3.2. Analytical strategy and sample preparation: how to minimize analytical artifacts? | 432 |
| 3.3. The anisotropic structure of graphitic carbons and polarization effects | 433 |
| 3.4. Dispersivity of the defect peaks and choice of a laser wavelength | 435 |
| 3.5. Fitting spectra: how to retrieve quantitative information on the structure of graphitic carbons? | 435 |
| 3.6. The intrinsic structural heterogeneity of natural graphitic carbons | 437 |
| 4. Applications of Raman spectroscopy to the study of natural graphitic carbons..... | 437 |
| 4.1. Carbonization/graphitization during terrestrial diagenesis/metamorphism | 438 |
| 4.2. Graphitic carbons and fluid–rock interactions | 440 |
| 4.3. Graphitic carbons as traces of life in the geological record | 441 |
| 4.4. Graphitic carbons and cosmochemistry | 444 |
| 4.5. Graphitic carbons and environmental sciences..... | 446 |
| 5. Conclusions..... | 447 |
| Acknowledgements..... | 447 |
| References..... | 448 |

Chapter 13. Raman spectroscopy applied to Gemmology

by EMMANUEL FRITSCH, BENJAMIN RONDEAU, THOMAS

| | |
|--|------------|
| HAINSWANG and STEFANOS KARAMELAS | 455 |
| 1. Introduction | 455 |
| 2. Raman spectroscopy applied to gems: strength and limitations | 457 |
| 2.1. Why Raman spectroscopy is useful for gemmologists | 457 |
| 2.2. Instrumentation | 458 |
| 2.3. Limitations of Raman spectroscopy | 459 |
| 2.3.1. Weak ‘Raman scatterers’..... | 459 |
| 2.3.2. Artefacts and non-Raman signal..... | 459 |
| 2.3.3. Competition with luminescence signals | 461 |
| 2.3.4. Sampled volume | 461 |
| 2.3.5. Keeping gemmology in mind when interpreting Raman spectra..... | 461 |
| 3. Determination of the gem species | 462 |

| | |
|---|-----|
| 3.1. Macrosamples | 462 |
| 3.2. Microsamples and inclusions | 464 |
| 3.2.1. Identification of phases in fluid inclusions..... | 466 |
| 3.2.2. Identification of inclusions due to a treatment | 466 |
| 3.2.3. Identification of thin films covering gems..... | 468 |
| 4. Determination of order-disorder: bandwidth considerations..... | 469 |
| 5. Resonant Raman spectroscopy and the identification of some organic colouring agents..... | 472 |

In Earth Sciences and Cultural Heritage Science we can only understand the formation of the ‘objects’ if they are well characterized. Optical observation, including optical microscopy, is still the primary tool and is essential in obtaining a preliminary, qualitative determination of an object, to determine the relations between it and other objects, and to place it in a general context. Most of the time, however, optical observations are insufficient. Spectroscopic methods are the second “set of eyes” used to gain greater insight into these objects and to use physical chemistry, if applicable, to derive the mechanisms of formation. Spectroscopic methods are numerous and have been described in a previous volume (6) in the *EMU Notes in Mineralogy* series, edited by A. Beran & E. Libowitzky (2004). In chapter 7 of that volume, Raman spectroscopy was addressed by Nasdala *et al.* (2004). Though that volume provides a very useful means to gain a general understanding of the contribution of each spectroscopy to mineralogy, no details of the theory, instrumentation and applications to the different types of objects could be provided. In the past eight years, there have been many improvements in the instrumentation which makes Raman spectroscopy a versatile technique used in many Earth Science and Cultural Heritage laboratories and so it appeared appropriate to have a school and a book dedicated to Raman Spectroscopy alone.

Four main topics are addressed here:

(1) **Theory:** in Chapter 1, dedicated to the Raman effect, in Chapter 4, dealing with the modelling of Raman spectra, in Chapter 2 to the links between fluorescence and Raman spectroscopy, in Chapter 10 for the exploitation of Raman spectra of minerals at high pressure and temperature, and in Chapter 12 for the rationale behind Raman spectra of graphitic carbon compounds; the basic theory of the instrumentation is developed in Chapter 3.

(2) **Methodology including the instrumentation:** in Chapter 3 and the Raman data analysis in Chapter 5.

(3) **Experimental aspects:** for the investigation of Raman spectra at high pressure and temperature using diamond anvil cells for minerals (Chapter 10) and geological fluids (Chapter 7) and with fused silica capillary for fluids (Chapter 6).

(4) **Application:** to different types of objects: geological fluids (Chapter 8), silicate glasses and melts (Chapter 9), biogeology and astrobiology (Chapter 11), graphitic carbons (Chapter 12), gemmology with a link with fluorescence spectroscopy (Chapter 13), and Cultural Heritage (Chapter 14).

A given chapter may address several topics, as it is impossible to obtain relevant information from the Raman study of a given object without considering the theory for the interpretation of the spectra, or instrumental set-up including special cells, or handling raw spectra.

It is also clear that the whole theory could not be developed thoroughly with all the details as it deals with quantum mechanics and group theory. This would require at least two further volumes! Thus, chapters focused on the theoretical aspects are written with the aim of giving the main steps and the results obtained from the theory and how theory can be used for the interpretation of Raman spectra. Readers who want to know the details of the theory and their associated calculations should consult specialized textbooks or publications which are referred to in the chapters hereafter.

Foreword

The present volume of the EMU *Notes in Mineralogy* series describes the ‘Applications of Raman Spectroscopy to Earth Sciences and Cultural Heritage’. It is associated with the 12th EMU ‘school’ co-sponsored by the French Centre National de la Recherche Scientifique (CNRS) as a ‘thematic school’ and by the Société Française de Minéralogie et Cristallographie (SFMC).

The present volume contains chapters arising out of lectures given at this ‘school’ which was held at the Université de Lorraine (Nancy, France) from 14–16 June 2012, immediately after the GeoRaman X meeting.

Spectroscopic methods such as Raman are used to investigate the structure and dynamics of matter. They are essential for the study of the different types of mineral or organic materials produced at the Earth’s surface or interior. As a result of technological improvements in gratings, detectors, filters and personal computers in the last decade, many micro-Raman spectrometers have become plug-and-play instruments, very easy to use and available at a lower cost than the early Raman microprobes. Thus, many laboratories in Earth Sciences and Cultural Heritage are equipped with these new spectrometers. Commercial portable Raman spectrometers working in the field have also contributed to the spread of Raman spectroscopy. However, poor levels of education in terms of Raman spectroscopy in undergraduate courses in Earth Sciences make it difficult for individuals to obtain information of the highest quality relevant to Earth sciences and Cultural Heritage.

The bid by G²R (Géologie et Gestion des Ressources Minérales et Energétiques UMR 7566) to organize the GeoRaman X meeting and the associated school was accepted by the International GeoRaman meetings Scientific committee. Members of the SFMC council and especially its President, Anne-Marie-Karpoff who supported this proposition, are thanked for their support. Christian Chopin, vice-President of EMU and SFMC Council member suggested contact with the EMU with a view to attracting an international audience to the school. Roberta Oberti and Herta Effenberger, President and Secretary, respectively, of EMU, together with the EMU committee welcomed this proposition and subsequent publication of the lectures in the EMU *Notes in Mineralogy* series. The organizers are grateful to the ‘Institut National de l’Univers’ (CNRS) and the ‘Formation Permanente of CNRS’ for badging this event as a thematic CNRS school and to the Université de Lorraine for hosting the event. Many thanks to the contributing authors for publishing their chapters here, and to Kevin Murphy of the Mineralogical Society for his efficiency in the production of the volume. Finally, the editors are very grateful to Marie-Christine Boiron, Patrick Lagrange and Christine Leonard of the G2R laboratory for their help in organizing the school.
