Subject index

Numbers refer to the page where a definition or an explanation of, and/or a *figure* or a **table** on a given subject is found.

Entries are repeated, represented by the ~ sign, in lower level sub-entries only where it facilitates understanding.

- 5000 tonne 6/8 multi-anvil device 17
6/8 multi-anvil devices 10, 11
 synchrotron X-ray diffraction in ~ 308, 309
- Φ^4 model 164
- AAS *see* atomic absorption spectroscopy
ab initio structure solution 301
absorption 258, 260
acoustic measurements of shock wave speed 418
acoustic resonance spectrum of tourmaline 108
acoustic resonant vibration method 104
acoustic soft mode 143
acoustic waves in crystals, propagation of 106–107
adsorption 258–260, 261–262, 263
 heterogeneous ~ 260, 261
 outer-sphere ~ 260
affine image 40
affine transformation 40
AFM *see* atomic force microscopy 201
air gun accelerator 370
alkali cyanides
 deviations from Cauchy relations of cubic ~ 185
alkali halides
 deviations from Cauchy relations of cubic ~ 185
 thermoelastic constants of ~ 192
amorphisation, pressure-induced 54–55
analytical techniques
 bulk ~ 199
 microscopical ~ 201–202
 overview of ~ 200–204
 surface-sensitive ~ 199–214
Andrade equation 423
anelastic deformation 421
anelastic relaxation in LGT 111
anelasticity in polycrystalline materials 430–431
angular probability distribution of the electrons 32, 33
anharmonicity of the thermal motion 47, 48
anhydrous minerals, incorporation of water in nominally ~ 247
anion formation 35
anisotropic temperature factors 47
anisotropy
 ~ of longitudinal elastic stiffness 174–175, 178, 179–181
 correlation between ~ and crystal structure 182
 correlation between ~ of certain physical properties 181
 influence of the ~ of the bonding system on elastic behaviour 173, 180
anomalous bond compressibility 57
anorthite melt, temperature dependence of shear and bulk moduli, relaxed bulk modulus, viscosity and relaxation time of ~ 80
antidistortive phase transition 142, 143
antiferrodistortive phase transition 142, 143
antiferroelectric phase transition 142, 143
antipolar phase transition 142, 143
AO *see* atomic orbital(s)
aqueous fluids
 properties of 226–229
 trace element partitioning between ~ and minerals 243–245
area detectors 298
Archimedean technique of melt density determination 84
Arrhenian equation 69–70
asymmetric diamond anvil cell 313, 314, 315
atomic absorption spectroscopy (AAS) 202
atomic compressibility, relative 57
atomic environment
 long-range ~ 38–39
 short-range ~ 36–38
atomic force microscopy (AFM) 201–202, 204–205, 206, 207
atomic form factor 289, 292
atomic number (*Z*) 32
atomic orbital(s) 34, 35
 ~ and atomic co-ordination 36
 hybridisation of ~ 34, 35
atomic order
 long-range ~ 38–39
 short-range ~ 36–38
atomic packing *see also* packing (atomic)
 ~ model of crystal structures 43

- atomic positions, split 50
 atomic probability distribution
 ~ and thermal displacement parameters 46–47
 multimodal ~ 50
 atomic radii and ionic radii 36–37
 atomic scattering factor 288
 atomic structures, description of ~ 32–46
 attenuation 424
 ~ in the mantle calculated for different grain sizes 437
 seismic ~ in the upper mantle 424, **425**, 426
 shock wave ~ 376
 axes
 crystallographic ~ 42
 inversion ~ 40
 rotation ~ 40
 screw ~ 41
 background contribution 300
 ball-and-stick model of crystal structures 43
 beam line 295
 high pressure synchrotron ~ components 316
 beam optics 295, 296, 297
 behoite, high-pressure powder diffraction of 319–321
 bending magnet 295
 bilinear coupling 150–151, 153
 binary oxides, *C*- and elastic *S*-values of **185**
 biquadratic coupling 150
 Bloch theorem 125
 bomb 6, 8, 9, 10
 bond(s) *see also* bonding or chemical bonding
 ~ compressibility
 anomalous ~ ~ 57
 intrapolyhedral ~ ~ 57
 ~ libration
 ~ ~ and rigid-body motion 48–50
 shortening of interatomic distances due to ~ ~ 50
 ~ polarisation 35, 36
 ~ strength 37
 ~ valence 37, 38
 ~ ~ concept of Pauling 37–38
 bonding *see also* chemical bonding
 anisotropy of the ~ system, influence on elastic behaviour of the 180
 covalent ~ 34–35
 dipole formation during ~ 35, 36
 equilibrium ~ 35
 ionic ~ 35
 nondirected ~ 35
 booster ring 295
 Born–Oppenheimer approximation 118
 Bragg equation 285
 Bragg intensities, effects influencing ~ in a diamond anvil cell 323–324, 325
 Bragg reflection geometry 296
 Bragg transmission geometry 296
 Bragg–Fresnel lenses 297
 Bravais lattices 42
 Bremsstrahlung *see* continuous X-ray spectrum
 Bridgman seals 2
 Brillouin scattering 105, 418
 Brillouin zone sampling 125–126
 Brownian motion 265
 bubble-bearing melts, properties of 85
 bulk analytical methods 199
 bulk modulus (*B*) 52, 99, 177
 ~ calculated using PAW, LAPW and pseudo-potential formalisms **128**
 ~ data of silicate melts 78–79
 ~ of the mantle, average 423
 pressure dependence of the ~ 194
 relaxed ~ 78
 unrelaxed ~ 78
 Burgers creep function 423
 Burgers model 423, 426
 calcite
 atomic structure of ~ and its reconfiguration after cleavage 254, 255
 ~ otavite solid solution 268, 269
 binding energies for the ~ ~ 268
 unit cell parameters for the ~ ~ 268
 cleavage face of ~, AFM image of the ~ ~ exposed to air 259, 262, 270
 ~ ~ exposed to water 259, 262
 ~ ~ exposed to Ni solution 262
 cleavage face of ~, XPS spectrum of the 211, 255
 ~ ~ exposed to water and to a saturated CaCO₃ solution 258
 ~ ~ exposed to water and to a Ni solution 262
 ~ ~ showing the adsorption of Zn 267
 precipitation of ~, AFM image of 264, 265
 shock effects observed in ~ 381
 solid-state diffusion in ~ 269, 270
 surface of ~
 atomic scale image of the ~ ~ 206
 LEED pattern of the ~ ~ 213, 255
 TOF-SIMS chemical map of the ~ ~ 270
 carbon polymorphs
 anisotropy of longitudinal elastic stiffness of ~ 174
 CaSiO₃ perovskite 451–453

- decomposition of ~ 452–453
 enthalpy data for ~ 453
 electrical conductivity of ~ 452
 structure and symmetry of ~ 451, 452
 stability of ~ 452–453
- cation formation 35
- cation ordering and chemical variations 44
- Cauchy relations 450–451
 deviations from ~ 181–183, 185, 451
 ~ ~ and mean elastic stiffness **183**
 longitudinal effect of ~ ~ 184
- Cauchy's deformation tensor 97
- CCD *see* charge-coupled device
- Cd_2SiO_4 , pressure dependence of the lattice parameters and structure of the thenardite-type ~ 59
- cell, unit 41
- centred lattices 41
- cerium oxonitridosilicate chloride, HP phase transition in 55
- chalcantite, anisotropy of longitudinal elastic stiffness in ~ 180
- charge-coupled device (CCD) 298
- charge density wave state 45
- chemical bonding 32–36
 changes in ~ under extreme conditions 25–26
 ~ and electronegativity 34
 ~ through electron pair formation 34, 35
 ~ through electrostatic interaction 35–36
- chemical variations
 ~ and cation ordering 44
 phase transitions due to ~ 44
- Christoffel determinant 106, 178
- Clausius–Mosotti equation 173
- CO_2 solubility in minerals 247
- cobalt, X-ray transmitted intensity of, at 42 GPa 346
- Coble creep 427
- coelastic phase transition 142, 143
- coesite, anisotropy of longitudinal elastic stiffness in 174
- cohesive energy calculated using PAW, LAPW and pseudopotential formalisms **128**
- cold compression curve 363
- cold-seal pressure vessels 3, 6
- collision front 359
- commensurate reaction layer at mineral surfaces 254
- compressibility
 anomalous bond ~ 57
 ~ and wave speeds 78–80
 ~ of silicate melts, determination of 78
 ~ of silicate melts as a function of pressure, determination of 80
- intrapolyhedral bond ~ 57
 linear ~ 99
 pressure derivative of the ~ 194
 relative atomic ~ 57
 volume ~ 99
 X-ray measurements of ~ 418
- compression mechanisms 56–59
- compressional modulus of silicate melts 79
- Compton scattering 291
- configurational entropy and viscosity 69–70, 71, 72–74
- connectivities of MX_4 tetrahedra 38
- constant height image *see* deflection mode image
- continuous X-ray spectrum 294–295
- converging shock wave setup 373
- converse piezoelectric effect 97, 102
- co-ordination (atomic) 36–38
 ~ figure 36
 ~ number (C.N.) 36
 cubic eight-fold ~, critical radius ratio for 37
 dependence of ~ on the spatial distribution of orbital lobes 36
 dependence of ~ on the relative sizes of atoms 36, 37
 octahedral six-fold ~, critical radius ratio for 37
 tetrahedral four-fold ~, critical radius ratio for 37
 trigonal planar ~, critical radius ratio for 37
- coprecipitation 265
- correlation energy 120
- correlation hole 121, 122
- Cosserat single-crystal plasticity 407
- Coulomb forces 35
- Coulombic attraction 35
- Coulombic electrostatic interaction 35
- Coulombic repulsion 35
- coupled order parameters *see* order parameter coupling
- coupling coefficients 177
- covalent bonding 34–35
- CPO *see* crystal preferred orientation
- Cr_2SiO_4 , high-pressure structure determination of **328**, 329
- creep function
 Burgers ~ 423
 ~ of different types of time-dependent deformation 422
- critical exponents 163
- critical point of water 227
- critical radius ratio 37
 ~ for cubic eight-fold co-ordination 37
 ~ for octahedral six-fold co-ordination 37
 ~ for tetrahedral four-fold co-ordination 37
 ~ for trigonal planar co-ordination 37

- critical resolved shear stress (CRSS) 400, 403
critical transition pressure 54
CRSS *see* critical resolved shear stress
cryo-crystallography 304–305
cryostats for diffractometers 304–305
crystal-bearing melts, properties of 85
crystal classes 42
crystal monochromator 296
crystal preferred orientation (CPO)
~ achieved during high-temperature experiments 342, 343
evolution of the ~ during deformation 402–405
crystal structure
atomic packing model of ~ 43
ball-and-stick model of ~ 43
correlation between elastic properties and ~ 184
~ determination, precision of high-pressure 328, 329
~ investigation at high temperature 302–304
~ refinement 301
codes for ~ ~ 301
combined ~ ~ from neutron and X-ray data 301
~ of time-of-flight diffraction data 301
~ solution 281–282, 301
ab initio ~ ~ 301
polyhedral model of ~ 43
pressure dependence of the ~ 57, 59
reconfiguration of the ~ at the mineral surface 254–256
relaxation at the termination of the bulk ~ 254–256
crystallography
high-pressure ~ 305–330
high-temperature ~ 302–304
low-temperature ~ 304–305
CsCl structure 450
cubic HP assembly used in the d-DIA device 21
culet 6, 217
- DAC** *see* diamond anvil cell
d-DIA device *see* deformation DIA device
dead-weight pressure gauge of Hall 2
defects *see also* lattice defects or structural defects
displacive phase transitions, influence of ~ on the behaviour of 141–142
evolution of ~, atomistic simulations of the 389
point ~ 45–46
Frenkel ~45
Schottky ~45
deflection mode image 205, 206
deformation DIA device 18, 19–21, 340, 341
deformation
anelastic ~ 421
crystal preferred orientation, evolution during ~ 402–405
~ mechanisms 351–352
~ rates of single and polycrystals 419
~ tensor 96, 99
Cauchy's ~ ~ 97
Lagrange's ~ ~ 97
elastic ~ 421
longitudinal ~ 97
types of ~s 421
mechanical model of different ~ ~ 422
plots of different ~ ~ 422
viscous ~ 421
density
melt ~
determination of ~ ~ by the Archimedean technique 84
determination of ~ ~ by thermal expansion methods 85
determination of ~ ~ by the sink-float method at high pressure 86
determination of ~ ~ by shock-wave measurements at high pressure 86
prediction of ~ ~ 84
~ distribution in the Earth's interior 3
~ of silicate melts 84–85
~ ~ at high pressure 86–87
~ ~ as a function of pressure, temperature and composition 87
density functional perturbation theory (DFPT) 128–131
phonon dispersion curves and phonon spectrum obtained using ~ 130
density functional theory (DFT) 118, 120–125, 167–168
desorption 263
detector(s)
area ~ 298
image plate ~ 298
ion mass ~ 208–209
magnetic sector ~ 208
photographic film ~ 297–298
point ~ 298
quadrupole ~ 208
time-of-flight (TOF) ~ 208
deviatoric stress 317, 318
Devonshire theory 148
DFPT *see* density functional perturbation theory
DFT *see* density functional theory
DIA cubic anvil device 18–21
deformation ~ 18, 19–21
synchrotron X-ray diffraction in ~ 308

- diamond
- anisotropy of longitudinal elastic stiffness in
 - ~ 174
 - ~ cell *see* diamond anvil cell
 - ~ cubes in multi-anvil devices 17–18
 - diamond anvil 217, 218
 - deformation of ~s at high pressure 311
 - ~s for diffraction 310–312
 - three bevelled diamond tip in a ~ 311
 - diamond anvil cell(s) (DAC) 3, 6, 21, 22, 23, 342–344
 - application of ~ 4
 - asymmetric ~ 313, 314, 315
 - ~~ advantages of ~~ in X-ray diffractometry 314–315
 - detection of melting in ~ 274–275
 - detection of phase transitions in ~ 274–275
 - diffraction conditions with the ~ 321, 322–324, 325
 - diffraction experiments, adaptation of the ~ for 310–315
 - effects influencing Bragg intensities in a ~ 323–324, 325
 - falling-sphere method adapted for ~ 241
 - gaskets in ~ 22
 - heating in ~ 22, 274, 344
 - Holzappel-type ~ 21
 - in situ* measurements in ~ 23
 - laser-heated ~ 217, 218, 219–224, 274, 344
 - melting experiments in ~~ 274, 275
 - pressure measurement in ~~ 219, 220
 - temperature measurement in ~~ 221, 222
 - Mao–Bell-type ~ 21, 22
 - measuring strain in ~ 345
 - micro-furnace in ~, use of 223, 224
 - types of measurements in ~ 223
 - Merrill–Bassett-type ~ 21, 22
 - moissanite anvils in ~ 22
 - pressure-transmitting media in ~ 22–23, 218–219
 - principle of ~ 5
 - single-crystal diffraction with the ~ 321–330
 - shock experiments, advantages in using ~ over 217
 - supporting backing plates in the ~ 312, 313
 - types of ~ 21, 22
 - diamond-trap technique, measuring of mineral solubility at extreme pressures by 231, 232, 243
 - diaplectic glass 382
 - diffracted beam 283
 - diffraction 203–204
 - ~ conditions with the diamond anvil cell 321, 322–324, 325
 - ~ data collecting strategies 300
 - ~ experiments
 - ~~ in diamond anvil cells 310–315
 - ~~ in multi-anvil devices 307, 308, 309
 - ~~ in the Paris–Edinburgh cell 309–310
 - ~~ with large-volume presses (LVP) 305–310
 - ~ techniques 287, 288
 - ~~ at high and low temperatures 301–305
 - ~ vector 286
 - high-pressure ~ 305–330
 - high-temperature ~ 302–304
 - ~~ devices and furnaces 303
 - requirements for ~~ 302–303
 - low-energy electron ~ (LEED) 204, 212, 213, 214
 - low-temperature ~ 304–305
 - high-pressure powder ~ 315–321
 - diffraction conditions and instrumentation for ~~ 315, 316
 - obtaining and evaluating ~~ images 318, 319, 320
 - high-pressure single-crystal ~ with the diamond anvil cell 321–330
 - probes for ~ 204
 - theory of ~ 282–294
 - dynamical ~~ 282
 - X-ray ~ (XRD) 204
 - diffractometer instruments 294–298
 - four-circle ~ 297
 - powder ~ 297
 - requirements to ~ 294
 - diffuse scattering 300
 - diffusion 265–269
 - ~ rates 267
 - solid-state ~ 266–267
 - surface ~ 266
 - diffusional creep
 - ~ in minerals 426–427
 - ~ as the deformation mechanism of the upper mantle 436
 - diffusivity and viscosity 428
 - dipole formation during bonding 35, 36
 - Dirac equation 118
 - direct methods 282, 301
 - direct piezoelectric effect 97
 - discontinuous phase transitions 156, 157, 158–161
 - dislocation(s) 45
 - ~ core modelling 394
 - ~ creep in minerals 426–427
 - ~ density evolution in a shear deformation multi-anvil assembly 343
