In this index, a keyword can be included many times - both as an individual entry and as part of a sublist to one or more higher level keywords. In the latter case, the page numbers are generally restricted to those in the context of the higher level keyword; the individual entry for these keywords may, however, contain page references to other sections of the book. Multiword keywords are often listed under two, or more, keywords; for example, cross-domain leakage is listed under both cross-domain and leakage. Some multiword keywords are condensed; for example, residual static corrections is often abbreviated to residual statics.

ABC method, 189-191, 229, 230, 252
ABCD method, 190-191
accuracy
crosscorrelation picks, residual statics, 333, 387
datum statics, requirements, 68; see also data
processes, static shift/error impact
timing, refraction surveys, 152, 160, 161
timing, uphole surveys, 107-108, 112-113
adjustments/corrections; see corrections/adjustments
aerated layer; see weathered layer
air, velocity, 24
analog data, time break, 88-89
anchor (shothole), 108
angle dependent
residual statics, 328, 340
static corrections, 259, 261
anisotropy, 31-32, 233, 237, 241
array
forming, noise (signal) attenuation, 7, 17, 19, 311-312
intra-array statics, 7, 14, 17, 18-19, 65, 158-159, 258, 277, 311, 454
length correction, refraction surveys, 179
refraction recording, 152, 157, 158-159, 166
source-to-receiver azimuth dependence, 179, 180
arrival-time
corrections/adjustments; see refraction surveys,
arrival-time adjustments; uphole surveys, arrival times
picking; see refraction surveys, arrival-time picking;
uphole surveys, arrival times
attenuation, near-surface layers, 14
automated methods, refraction arrival-time picking,
161-164
azimuth
partition, 3-D surveys residual statics, 440
source-to-receiver azimuths, 179, 180, 330
velocity variation, 381, 385, 407, 408

bandwidth (frequency)-dependent residual statics, 449, 471
Banta method, 252
Barry’s method, 252
Barthelmes method, 252
Baumgarte ray-stretching method, 252
binning (subsurface), 328, 329, 346, 353, 354, 364, 382, 385, 441
binning (surface), 228, 327, 364, 413
biogenic gas, 18, 28-29
birefringence, impact on residual statics, 443-444
blind zone, 150-152
Blondeau method, 206-211, 229, 252
borehole
drilling process, alteration, 69, 103, 110, 121-122
invaded zone, 105, 110, 111, 121
lithology, 69, 106-107
mud/water invasion, velocity impact, 121, 493
uphole survey depth, 104, 106
bow wave, 143
buried receivers, 3, 14, 18, 55-57, 110, 111, 485

camera speed requirements, uphole surveys, 113
cdp corrections; see trim static corrections

reflection (time) patterns, 278, 279-286, 293-294, 342, 349-350, 363
residual moveout impact, 284, 286
separate-surface stacks, 293-296, 422-427, 458, 486
source-ordered display, 279-282, 342, 349-350, 363
spreadlength dependence, 284, 286-289, 296
subsurface features, coincidence with, 418, 468, 470, 487-490, 491-493, 494
surface wave dispersion, 78-80
dsurvey objectives, 5, 67-68, 87, 111-112, 242, 474, 483
swamps, 17-18
swell, ocean, 23, 60
tape formats, 89, 94
Tarrant method, 253
temperature
genetic algorithm, 406
simulated annealing method, 396-397, 398-399, 400-401, 404
time-variant effect on near surface, 22, 23
theory, refraction technique, 142-144
thin layers, refraction arrivals, 158
Thornburgh’s method, 253
three-dimensional (3-D) surveys
displays, 90, 93
QC using refraction arrivals, 70, 159, 176-177
raypaths in near-surface layers, 262
refracted raypaths, non-commonality, 180, 225
refraction arrival-time adjustments, 180
refraction crosscorrelations, 168, 169, 170
refraction interpretation, 225-228
residual static corrections; see 3-D surveys, residual static corrections
tidal changes & corrections, 23, 60
water depths, 62, 262-263, 270
3-D surveys, residual static corrections
azimuth partition, 440
azimuthal velocity variation, 381, 385, 407, 408
binning (subsurface), 328, 353, 354, 382, 385, 441
binning (surface), 327, 413
correlation time surface, 416
cross-line control (structural), 410, 413-414
cross-line dip, 353, 382, 385, 407, 473
data conditioning/preprocessing, 407
data selection, 407
data volume, partitioning of, 407
decoupled solution, 408, 410-414, 458, 473
deep-water recording, 414
display, 93, 407-408, 452
feathered streamer, 413
horizontal time sections, 408, 412, 414, 416
jitter, trace-to-trace, 408, 413
long wavelength, 410, 416
marine, 413-414
poststack, 414, 416, 441
seam statics, 408, 410-414, 458, 473
single-fold case history, 411-412
streamer feathering, 413
structural time shifts (intrabin), 382, 385, 407, 441
subsurface binning, 328, 353, 354, 382, 385, 441
super-bin, 412-413
surface binning, 327, 413
trim statics, 407, 441; see also trim static corrections
threshold approach, refraction arrival-time picking, 162-163
tidal changes & corrections, 23, 60
tilted plane, 45
time-bandwidth product, 331, 385
time break, analog data, 88-89
time-break test, uphole survey, 113, 116
time–depth display, 104, 117-122; see also uphole surveys, interpretation
time-distance
curves, composite, 212
displays, refraction picked times, 172
time-lapse surveys, 22-24, 485
time section - comparison with depth section, 10, 43, 44
time shift, maximum allowable, 387
time-term method, refraction interpretation, 221, 226
time-to-depth conversion, 10, 21, 43, 45, 68, 74-75, 277, 315, 484, 488, 489
permafrost, 21, 489
velocity estimation, 301, 308-309, 311
very long-wavelength static anomalies, 68, 277, 484
time-to-depth relationship, 43, 44, 49
time-variant
mis-ties, 473, 500
near-surface layers, changes; see near-surface layers, time-variant changes
residual static corrections, 262, 328, 439-440, 471
time window specifications, data selection, 385-387
timing requirements (accuracy)
refraction surveys, 152, 160, 161
uphole surveys, 107-108, 112-113
tomography
crosshole surveys, 130-131
hole-to-hole surveys, 130-131
hole-to-surface surveys, 129-131
refraction interpretation, 221-222, 226
residual static corrections, 437
topography; see near-surface topography
trace envelope, 333, 384
trace planes, 290, 329, 334, 344
transition zone, base of permafrost, 21, 437
transition zone surveys
tidal changes & corrections, 23, 60; see also near-surface layers, time-variant changes
uphole surveys, 108
transmission, refracted waves, 143-144
traveltime equations
common-midpoint-based method, 330-331, 358-361
common-offset-based method, 394
common-surface-location methods, 330, 344
cross-line dip, 329-331
decomposition; see decomposition, traveltime equations
trim static corrections, 382, 384, 389, 390, 392, 407, 439, 441
quality control, 441
structural time shifts (intrabin), 382, 385, 407, 441
T²–X² analysis; see X²–T² analysis
turning waves, 220, 222
two-step method, 398-399
UKOOA P1/84, 94
unconsolidated sediments, velocity, 25-26
underconstrained equations, traveltimes, 361
undersampling, near surface, 5, 9, 49, 67, 231, 452
uphole method, 127-129
uphole phone (geophone), 3, 53, 131
uphole surveys
arrival-time corrections, 104, 116-117
arrival times, picking and timing, 112-116
data acquisition, 104, 106-111
drilling process, borehole alteration, 69, 103, 110, 121-122
interpolation between, 49-52, 86, 103, 111-112, 123-125, 141
interpretation; see uphole surveys, interpretation
invaded zone, 105, 110, 111, 121
lateral changes near borehole, 125, 127-131
marine, 106, 111
objectives, 111-112
permafrost, 122
refractor depth conversion, use in, 124-125, 232, 237
sample interval (depth, spatial), 111-112
shallow water, 108
shear waves, 135
summary, 69
time–depth display, 104, 117-122; see also uphole surveys, interpretation
