

## ACKNOWLEDGMENTS

We would like to acknowledge Professor Harry Keen for his contributions to insulin pump therapy. Professor Keen died at the age of 87 on April 5, 2013. He was a visionary in realizing what insulin pump therapy could do to improve the lives of individuals dependent on insulin treatment. We would also like to acknowledge Professor John Pickup for his innumerable studies and scientific manuscripts that helped advance the field of diabetes technology over the last four decades. In addition, the passing of Alfred E. Mann on February 25, 2016, was a loss of a great scientific and business leader. Alfred Mann founded the first successful diabetes technology company that made insulin pumps and continuous glucose monitors. Mann envisioned that these could be combined to automate insulin delivery to improve the lives of people with diabetes—something we are just realizing while writing this second edition. Mann was 90 years old at his death.

We have had many reviewers, including Kelly Joy, Gail Vanairsdale, Julie Schmaderer, Linda Burkett, and Theodora Padron. Their advice and editing were invaluable.

As always, we are inspired by our patients and their families, as well as our own families.
