Gelification, 46, 81, 82
Geochemical gelification, 47
Germany, characteristics of coalbed gases in western, 171-172
Global energy budget, and coal, 4-5
Graphite, 79
Graphitization, 43, 44

Hardgrove Grindability Index, 65, 66, 101
High-pressure fracturing treatments, modeling of, 335
Horizontal coalbed methane wells, 305-306
Humification, 45, 81, 82, 83
Huminite, 81
Huminite/vitrinite group, 83-84
Hydraulic fracture stimulations, 312-316
cross-linked gel fracture treatments, 314-316
foam fracture treatments, 316
fracturing of multiple seams, 313
gel damage to coal, 313-314
water fracture treatments, 316-318
Hydraulic fracture treatments
gas production comparisons, 320-321
sandless fracture treatments, 318-320
Hydrocarbon generation, related to coal composition and rank, 103-106
Hydrocarbon potential, related to maceral association, 112

Induced gamma ray spectrometry logs, 293-295
responses in coals, 297
Inertinite, 81
Inertinite group, 91-92
Injection wells for water disposal, 353-354

Kerogens
classification of, 137
comparison of types, 135
Kinetic modeling, 144-147

Langmuir isotherm, 204-205
Lignite, 79
Liptinite, 81
Liptinite group, 84-91
Liquid chromatography, bitumen extraction and, 104-106
Lithotypes, 80-81
Lithotype thickness, effect on cleat spacing, 121-122
Logging options for uncased and cased wells, 300
Logging tools
basic principles of, 287-295
responses in coals, 295-297
Logs
acoustic (sonic), 290
density, 290-293
gamma ray, 288-290
induced gamma ray spectrometry, 293-295
information available from, 297-299
natural gamma ray spectrometry, 293
neutron, 290
resistivity, 287-288
Lower Silesian basin (Poland), characteristics of coalbed gases in, 174

Macerals, 81-92, 134
analyses of, 81
appearance of via optical microscopy, 56-57
changes in during coalification, 57
characterization of, 83-91
classification of groups, 82
cleats and filling of, 124
homogenization of, 81-83
primary, 83
relation between association and hydrocarbon potential, 112
secondary, 83
structure, genesis, and source rock potential of, 106-112
at various rank stages, 92
Mass balance approach
to petroleum migration, 230-232
to petroleum potential, 142-144
Maturation, 39
of organic matter, 140-142
Measurement of sorbed gas
direct methods, 209-213
comparison of conventional desorption methods, 211-212
conventional desorption methods, 209-212
curve fit method, 210-211
and desorbed gas composition, 212
and desorption rate, 211
other methods for gas content determination, 212
pressure core desorption, 213
Smith and Williams method, 210
USBM direct method, 210
indirect methods, 213-215
and gas-in-place, 214-215
Kim’s approach, 213-214
sorption isotherms and bulk density logs, 214
Mechanical properties of coal, 65-66
Metanthracite coal, 79
Methane
coalbed. See Coalbed methane
control of for underground coal mines, 237-264
drainage. See Methane drainage
Methane drainage
establishing geologic framework for site, 240-242
establishing need for, 238-240
history of, 237-238
planning
and coalbed discontinuities, 240-241
and fracture analysis, 241-242
general mapping requirements, 240
and multiple gas reservoirs, 241
surface, 252-264
directionally drilled holes, 259-260
longwall gob gas vent holes, 260-264
stimulated vertical wells in virgin coalbeds, 253-259
technology, 242-264
underground, 243-252
cross-measure boreholes, 250-251
horizontal boreholes (water infusion), 249-250
horizontal boreholes from shaft bottoms, 247-249
horizontal boreholes drilled to other horizons, 251-252
horizontal holes in mine, 243-247
vertical holes into mine roof, 250
Index  399

Microhardness, 65
Microlithotype analysis, 81
Microlithotypes, 92-95

Migration
of gas, 232-234
of oil and gas in coals, 219-234
physical conditions of, 221-223
potential mechanisms as avenues, 223-225

Mineral-bituminous groundmass, 92
Mineral energy resources, 3
Mineral matter, 92-95

Minerals in coal
accessory, 94
carbonates, 94
clay, 94
oxides, 94
sulfides and sulfates, 94

Minifrac analysis, 330-332
Moisture content and coalification, 53

Molecular fraction of coal
composition of, 53
compositional evolution of, 54
hydrocarbons in, 53
structure of, 52-53

Multiple gas reservoirs, and methane drainage, 241
Multiple seams, fracturing of, 313

Natural gamma ray spectrometry logs, 293
responses in coals, 295-297
Neutron logs, 290
responses in coals, 295

Nondeltaic coastal plains, 17

Oil
mechanisms for primary migration of, 149-150
migration of in coals, 219-234
Oil-source correlations, 147-149

Openhole cavity completions, 306-312
cavity geomechanics, 309
cavity size, 308-309
cavity technique, 307-308
costs of, 308
extent of collapse and failure zone, 310
model for anisotropic stresses, 310
permeability enhancement, 310
production differences between openhole cavity
completion and gel-fracture stimulations, 310-311
reservoir stimulation, 311-312

Organic matter
characterization of with reference to coal, 134-140
composition of crude oils generated from coaly, 185-196
maturation of, 140-142

Organic metamorphism, 39

Organic petrography, 134-135
Oxides, 94

Parametric analysis of coalbed methane, 387-390
developmental strategies, 388
flow capacity, 387-388
resource concentration, 387
well spacing and stimulation, 390

Peat, 79
burial, 44
surface, 44

Peat bogs
cold climate, 20
temperate climate, 19
tropical, 19
See also Bogs, Peatlands

Peatification, 43, 44, 46

Peatlands
and alluvial fans, 14
and alluvial plains, 14
characteristics of, 21
and deltalic coastal plains, 16-17
drainage systems of, 13-14
fens, swamps, and marshes, 20-21
and nondeltaic coastal plains, 17

Peatland systems, 17-21
and bogs, 17-20

Peat mire, 79
minerotrophic, 79
ombrotrophic, 79
rheotrophic, 79

Peat-to-lignite transition, 46-47

Permeability
determination of by well testing, 364-367
stress sensitivity of in coalbeds, 364

Petrographic characterization, new concepts of, 136
Petrographic properties, 140-142
Petrography, organic, 134-135

Petroleum expulsion
empirical hydrocarbon thresholds for, 150
from coal and terrigenous sediments, 149-150

Petroleum generation, timing of, 144-146

Petroleum migration
geochemical and microscopic effects of, 225-230
mass balance approaches, 230-232

Petroleum potential
high resolution pyrolysis evaluation of, 136-140
mass balance approach to, 142-144

Physical sorption, 203-204

Piceance basin (USA), characteristics of coalbed gases in, 176-179

Polymerization, 50

Poroelastic effects, 326

Porosity
of cleats, 123-124
crude oil, 60-61

Powder River basin
characteristics of coalbed gases in, 179
crude oil, 22-25

Pressure, and coalification, 66-67
Pressure interference concept in coalbed methane wells, 368-369

Progressing cavity pumps, 347

Proppant-induced pressure effects, 326-327

Proximate analysis, 59, 98-100

Pump failure, reducing, 356

Pumps
progressing cavity, 347
sucker-rod, 345-347

Downloaded from https://pubs.geoscienceworld.org/books/chapter-pdf/3837506/9781629811048_backmatter.pdf by guest on 07 December 2018
Pyrolysis, high-resolution, and evaluation of petroleum potential, 136-140
Pyrolysis yields during coalification, 59-60
Reflectance, changes in with rank, 57-58
Reservoir stimulation, 311-312
Residual gas, 64
Resinite, chemistry of, 109-110
Resistivity logs, 287-288
responses in coals, 295
Reverse osmosis for water disposal, 354
Rock-Eval pyrolysis, 59-60, 103-104, 135
Rod failure, reducing, 357
Sandless fracture treatments, 318-320
San Juan basin
characteristics of coalbed gases in, 174-176
colbad methane in, 25-28
colbad methane production in, 381-382
development activity in, 381
economics of, 382
gas production capacity of, 381
production technology in, 381-382
resource concentration in, 381
Semi-anthracite coat, 79
Shear strain, effect of on coalification, 67-68
Solid material production problems, reducing, 357
Sorbate accessibility, 60-65
Sorbed gas
behavior of, 203-209
measuring. See measurement of sorbed gas
See also Sorption
Sorption
with coal rank, 206
of different pure gases, 207
effect of mineral matter on, 205
effect of moisture on, 205-206
isotherms. See Sorption isotherms
measurement of, 208-209
and particle size, 208
and sorbed phase volume, 208-209
techniques, 208
multicomponent gas, 207
and petrology, 206-207
physical, 203-204
relation of pressure and temperature to, 205
Sorption isotherms, 204-205
Langmuir, 204-205
models, 204
uses, 204
Sporinite, chemistry of, 111
Stress profiles and fracture height, 327-330
Stress sensitivity of permeability in coalbeds, 364
String fens, 21
Subbituminous A, 79
Subbituminous B, 79
Subbituminous C, 79
Sucker-rod pumps, 343-347
Sulfides, 94
Sulfates, 94
Surface area measurements, 62-63
Surface gas and water separators, 348-349
in Black Warrior basin, 348
in San Juan basin, 348-349
Surface morphology, of cleats, 124
Surface peat, 44
Surface water disposal, 353
Terrigenous sediments
biomarkers related to, 147-149
expulsion of petroleum from, 149-150
T-fractures, 325-326
Thermogenic gas, 159-160
Two-component model of coal composition, 41-42
Ultimate analysis, 100-101
Vitrinite, 81
chemistry of, 107-109
Vitrinite reflectance
and chemical parameters, 101
modeling, 146-147
suppression of, 58-59
Vitrinization, 43, 82
Volatile matter, 100
Water disposal, 352-355
combined processes, 354
injection wells, 353-354
reverse osmosis/evaporation, 354
surface, 353
water treatment options, 352-353
Water fracture treatments, 316-318
modeling of, 334-335
Water-gathering lines, 349
Water measurement systems, 349-350
Water treatment options, 352-353
Workovers, 356
preproduction, 356
recompletion, 356
reducing need for, 356-357
remedial production, 356
