

Index

A reference is indexed according to its important, or "key" words.

Three columns are to the left of a keyword entry. The first column, a letter entry, represents the AAPG book series from which the reference originated. In this case, ST stands for Studies in Geology Series. Every five years, AAPG will merge all its indexes together, and the letters ST will differentiate this reference from those of the AAPG Memoir Series (ME) or from the AAPG Bulletin (B).

The following number is the series number. In this case, 24 represents a reference from Studies in Geology Series 24. The third column lists the page number of this volume on which the reference can be found. Index entries without page numbers represent the title or compilation editors of this volume.
