### Explanation of Indexing

A reference is indexed according to its important, or "key" words. Three columns are to the left of the keyword entries. The reference is indexed according to its important or key words. The last column entry is the page number in this volume where this reference will be found. (This is especially evident with manuscript titles, which tend to be long and descriptive.) The reader must sometimes be able to realize keywords, although commonly taken out of context.

The following number is the series number. In this case, 10 represents a reference from Studies No. 10.

The last column entry is the page number in this volume where this reference will be found. Note: This index is set up for single-line entry. Where entries exceed one line of type, the line is terminated.
