

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

NEWSLETTER 33

New minerals and nomenclature modifications approved in 2016

U. HÅLENIUS¹ (CHAIRMAN CNMNC), F. HATERT² (VICE-CHAIRMAN CNMNC), M. PASERO³ (VICE-CHAIRMAN CNMNC) AND S. J. MILLS⁴ (SECRETARY CNMNC)

¹ Department of Mineralogy, Naturhistoriska Riksmuseet, Box 50007, SE-104 05 Stockholm, Sweden – ulf.halenius@nrm.se

² Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – fhatert@ulg.ac.be

³ Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – marco.pasero@unipi.it

⁴ Geosciences, Museum Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – smills@museum.vic.gov.au

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

DOI: 10.1180/minmag.2016.080.085

IMA No. 2016-035

Incomsartorite

Lengenbach quarry, Imfeld, Binnental, Wallis,
Switzerland (46°21'54"N, 8°13'15"E)

Dan Topa*, Berthold Stoeger, Emil Makovicky
and Chris Stanley

*E-mail: dan.topa@nhm-wien.ac.at

Sartorite homologous series

Incommensurate, approximant monoclinic:
 $P2_1/n$; structure determined

$a = 45.9944(2)$, $b = 7.8793(1)$, $c = 58.6716(8)$ Å,
 $\beta = 90.153(1)^\circ$

9.78(62), 3.862(70), 3.504(100), 3.458(51),
2.950(66), 2.944(77), 2.753(74), 2.750(74)

Type material is deposited in the collections of
the Naturhistorisches Museum Wien, Austria,
catalogue number N 9861

NOMENCLATURE PROPOSAL APPROVED IN AUGUST 2016

IMA 16-A Gadolinite supergroup

Proposal 16-A on the gadolinite supergroup is accepted. The supergroup is divided in two groups, defined on the basis of the tetrahedral cations: Si^{4+} in the gadolinite group, and P^{5+} or As^{5+} in the herderite group. The gadolinite group is further divided in two subgroups: the gadolinite and datolite subgroups. The herderite group is also divided in two subgroups: the herderite and drugmanite subgroups. Bakerite is discredited.

Seidozerite supergroup

The seidozerite supergroup has been established. The supergroup is divided into four groups: rinkite group, bafertisite group, lamprophyllite group, murmanite group, and includes 45 mineral species. As it was recognized from the revised end-member formulae that some minerals of the supergroup have species-forming rare-earth elements, the name

rinkite has been changed to rinkite-(Ce), mosandrite to mosandrite-(Ce), and hainite to hainite-(Y).

Hyalotekite group

The hyalotekite group has been established. It includes the minerals hyalotekite, khvorovite, kapitsaite-(Y) and itsiite.

ERRATUM

IMA No. 2014-061 Erazoite

In CNMNC Newsletter 23, the type locality was given incorrectly. The correct type locality is: Chilena mine, Soledad property, El Guanaco ore deposit, Antofagasta Province, Chile (25° 06'22"S, 69°32'10"W)
