

New Fellows of the Royal Zoological Society of NSW: 2010

Chris R. Dickman, FRZS, and member of the Council of the Royal Zoological Society of NSW

Under the Articles of Association of the Royal Zoological Society of NSW, the Council of the Society has the power to appoint eminent zoologists as Fellows of the Society. Between 1887 and 2009 a total of 77 Fellowship appointments had been made, entitling recipients to use the post-nominal title of FRZS. Fellows are Scientific Members of the Royal Zoological Society who have rendered distinguished service to:

- the Society, or
- Australian zoology.

At its meeting in October 2010, the RZS Council recommended that two new Fellows be appointed in recognition of their outstanding contributions to the science of zoology and to the understanding of native fauna and its conservation. These are Dr Harold Cogger, AM, and Associate Professor Michael Calver. Both zoologists accepted their nominations and were present at the Society's Annual General Meeting on 23 October 2010 to receive their certificates of Fellowship.

The following accounts were read at the AGM, with selected publications of both new Fellows appended here to provide a brief sketch of the scope and magnitude of their achievements.

Harold G. Cogger, AM, FRZS

Dr Harold Cogger will be well known to most people here today, especially for his extensive research on the ecology, systematics and biogeography of reptiles and amphibians of the Australian and broader Pacific regions. This work has resulted in a very large number of papers in the primary scientific literature, descriptions of dozens of new species, and probably an equal number of reports to government and non-government organizations on the status of marine and terrestrial reptiles and frogs in Australia, New Guinea, Norfolk Island, Christmas Island and elsewhere.

Despite the enormous influence of this body of work, Hal is probably best known for his landmark text *Reptiles and Amphibians of Australia*. Now in its sixth edition, this major work provides a synthetic overview and species by species account of all described species in the Australian region and keys that allow both budding and experienced herpetologists to identify the animals they encounter in the field. The book is so well known that no self-respecting herpetologist goes into the field without taking a 'Cogger'!

In addition to all this, Hal has had a number of important and influential 'day' jobs: He was Head of the Department of Herpetology at the Australian Museum for about 15 years and Deputy Director of the Australian Museum from 1977 – 1995. He was also a Research Associate at the California Academy of Sciences and Honorary Curator of Reptiles

for the Zoological Parks Board of New South Wales for several years. Hal served on many scientific advisory panels such as those for the National Biodiversity Alliance and the World Wide Fund for Nature – Australia, and was the committee chair for several more. These included, most notably, his chairmanship of the Australasian Reptile and Amphibians Specialist Group for the World Conservation Union (IUCN) and the Australian Biological Resources Study Advisory Committee. And of course, he has been the recipient of many honours and awards: an Order of Australia, honorary life memberships of herpetological societies in Australia and the US, the Nature Medallion Award from the Australian Photographic Society, and an honorary Doctor of Science degree from the University of Sydney.

I could go on, but Hal is far too modest to wish for that, and I suspect he is sitting somewhat uncomfortably already. I will conclude by saying that he also has papers in the pages of the Society's publications and, in 2003, received a Whitley Award in recognition of his outstanding services for the promotion of Australian zoology. In 2010, the Council was unanimous in agreeing that these many achievements fulfil the criteria for appointment to Fellowship of the Royal Zoological Society. A sample of Hal Cogger's publications is given below:

Cogger, H. G. 1957. Investigations in the gekkonid genus *Oedura* Gray. *Proceedings of the Linnean Society of New South Wales* **82**: 167-179.

Cogger, H. G. 1958. Australian geckoes. *Australian Museum Magazine* **12**: 343-347.

Cogger, H. G. 1959. Sea-snakes. *Australian Museum Magazine* **13**: 37-41.

Cogger, H. G. 1959. Australian goannas. *Australian Museum Magazine* **13**: 71-75.

Cogger, H. G. 1960. The ecology, morphology, distribution and speciation of a new species and subspecies of the genus *Egernia* (Lacertilia: Scincidae). *Records of the Australian Museum* **25**: 95-105.

Cogger, H. G. 1960. *The Frogs of New South Wales*. The Australian Museum, Sydney. 38 pp.

Cogger, H. G. 1964. The comparative osteology and systematic status of the gekkonid genera *Afroedura* Loveridge and *Oedura* Gray. *Proceedings of the Linnean Society of New South Wales* **89**: 364-372.

Cogger, H. G. 1965. Reptiles and frogs of Australia's arid regions. *Australian Natural History* **15**: 128-131.

Cogger, H. G. 1966. The status of the "elapid" snake *Tropidechis dunensis* de Vis. *Copeia* **1966**: 893-894.

Michael C. Calver, FRZS

Michael Calver is an Associate Professor at Murdoch University in Perth. It is a little unusual for the Royal Zoological Society to recognize Fellows beyond the state borders – not for any parochialism, but more because geography makes it harder for distant zoologists to make strong and distinguished contributions to the Society. However, Mike has been a frequent attendee and contributor to the Society's fora and has published consistently in the pages of the Society's books and its journal, the *Australian Zoologist*. And he has contributed magnificently to Australian zoology over many years.

Since gaining both a PhD and a Diploma of Education from Murdoch University in 1985, Mike has retained deep interests in both zoological research and biological education. Describing himself as a 'frustrated entomologist' (his PhD focused on the population ecology of the grasshopper *Acrida conica*), he has worked on bush flies while at CSIRO, on vertebrate pests while at the Agriculture Protection Board of Western Australia and, for more than a decade, has been involved heavily in setting and coordinating examinations for secondary school students aspiring to enter Western Australian universities. In this capacity, he acts as both Chief Examiner and Chief Marker.

In his 'day' job at Murdoch University, Mike has been involved in research on the impacts of feral cats on native fauna at Heirisson Prong and on the effects of mine site rehabilitation on cockatoos, and has led an intriguing series of studies on the effects of domestic cats on wildlife that have focused both on people's attitudes to the marauding behaviour of their pets and on novel ways that we can try to mitigate the damage that they cause. In addition to publishing many dozens of papers on these topics, and several others, he has more recently become fascinated by the emerging field of bibliometrics. In his almost 20 years at Murdoch he has been involved in distance education and has taught most zoological topics except entomology (no doubt becoming more frustrated as a result!).

Mike's dedication to both teaching and research is outstanding, as is his commitment to assisting his students and peers to achieve the best results from their endeavours. Thus, he has successfully supervised large numbers of Honours, Masters and PhD students, many of whom have gone on to productive careers in zoology in their own right. He is the senior editor of a key new text for undergraduate students (*Environmental Biology*, published by Cambridge University Press in 2009), and also the editor-in-chief of *Pacific Conservation Biology*. The latter position allows him to assist and mentor students and other inexperienced authors, encouraging them to maximize the import of their work for the broader conservation community.

In recognition of his many achievements Mike has received several honours for his teaching and research, including prestigious Teaching Excellence and Research Supervision Awards from Murdoch University. The Council was unanimous in agreeing that he receive a further award, that of Fellowship of the Royal Zoological Society. A selective list of Mike Calver's publications is given below:
