Aims

The aim of *Briefings in Bioinformatics* is to provide an indispensable resource for the experimental practitioner seeking awareness of the disparate sources of data and analytical tools of contemporary biology, biotechnology and medicine based on the molecular level. This includes all areas of genomics, proteomics, metabolomics, interactomics and network biology, imaging, systems biology, computational biology and clinical/medical informatics that have a molecular foundation to the study. Large-scale instrumentation and computerisation is reducing the time that needs to be spent in the laboratory. Instead, the rate-limiting step is the analysis and interpretation of data. The journal provides topical reviews of new methodologies as they become established.

The Editors, Martin Bishop and Russ Altman, welcome the submission of review papers and case studies for publication. Essential criteria for the publication of papers are that they provide practical guidance to the users of bioinformatics software and databases to supplement available manuals and tutorials, providing a brief conceptual review and overview of the problem addressed, its solution, dynamics and range and limitations. We publish reviews of clearly defined subject areas for both experimental biologists and for bioinformatics specialists. Reviews may be broader or more narrowly focussed but must cover a variety of approaches to a very well-specified biological problem or research area. We do not publish work on new methods that have not yet been described elsewhere. Please do not submit manuscripts concerning original research as they will be immediately rejected.

Some areas that members of the Editorial Board have identified as important and presently under represented in the pages of the journal include the complex fields of epigenetics and the construction of evolutionary models and the elucidation of evolutionary relationships. Methodological approaches of interest include software comparison and benchmarking, data cleaning and curation, accuracy of predicted and extracted information, ontologies and text-mining, solutions that allow for the large-scale analysis of biological data in reasonable time (high performance computing solutions and cloud systems), standards, training and change management activities, and the determination of causal relationships from data. There was specific mention of the use of ontologies for semantic-based analysis of molecular data and interaction networks, methods and tools for enrichment validation activities, and the determination of causal relationships from data. There was specific mention of the use of ontologies for semantic-based analysis of molecular data and interaction networks, methods and tools for enrichment analysis. Articles focusing on illuminating the bottleneck problems in important bioinformatics approaches will be especially helpful to readers. It must be emphasised that these comments are suggestions and are not intended to be prescriptive. As science advances the details of what is important changes and the Editors, Editorial Board and Reviewers will be flexible in their policies.

Types of Submission

Submissions of the following types are accepted for review in the journal:

- Review articles (2000–7000 words)
- Protocol for solving a specific problem using different sets of programs (2000–5000 words)
- Case studies in biological research applied to clinical practice (2000–5000 words)
- Opinion articles: topical or controversial areas that do not warrant a full review (500–1000 words)
- Letters to the Editors (relating to a topic previously published in the journal) (500–1000 words)
- Software and website reviews (by authors other than the originators) (500–1000 words)
- Book reviews (500–1000 words)

### Editorial Board

**EDITOR**
Martin Bishop  
Cambridge, UK

**NORTH AMERICAN ASSOCIATE EDITOR**
Russ B. Altman  
Stanford University, USA

**EUROPEAN ASSOCIATE EDITOR**
Anne-Laure Boulesteix  
University of Munich, Germany

**EDITORIAL OFFICE**
Alison Bentley  
Editorial Assistant, UK

**EDITORIAL BOARD**

- Susmita Datta  
  University of Florida, USA
- Jo Dicks  
  Institute of Food Research, Norwich, UK
- Werner Dubitzky  
  Pan-Descartes University, France
- Charlie Hodgman  
  University of Nottingham, UK
- Yonghuaui Jiang  
  Harbin Medical University, China
- Jacob Kochler  
  Deloitte Analytics Institute, Germany
- Hirokuki Kurata  
  Kyushu Institute of Technology, Japan
- Jingchun Lu  
  Peking University, China
- Shanmug Ma  
  School of Public Health, Yale University, USA
- Leonardo Martiño-Ramirez  
  National Center for Biotechnology Information, National Library of Medicine, USA
- Scott Markel  
  Dassault Systèmes BIOVIA, USA
- Tommaso Mazza  
  BICCS-Casa Sollvoro della Soffronza, Italy
- Graziano Pepele  
  University of Bari and CNR-IBBE, Italy
- Sandor Pongor  
  Pannoni Peter Catholic University, Budapest, Hungary
- Igor Rogozin  
  National Center for Biotechnology Information, National Institutes of Health, USA
- Maria Victoria Schneider (Vicky)  
  EMIR, Australia Bioinformatics Resource University of Melbourne, Australia
- Cathal Seoige  
  National University of Ireland, Galway, Ireland
- Parantu Shah  
  EMDBerkeley, Inc., Billerica, MA USA
- Thomas Werner  
  Genomics Software GmbH, Germany
- Fungqing Zhao  
  Bopin Institute of Life Science, China
- Qianyu Zhao  
  Shanghai Advanced Research Institute (CAS) and ShanghaiTech University, China

**BOOK REVIEWS EDITOR**
Sean Mooney  
Associate Professor  
Buck Institute for Age Research  
801 Redwood Blvd  
Novato, CA 94945  
USA

**Book reviews (500–1000 words)**

**Software and website reviews (by authors other than the originators) (500–1000 words)**

**Case studies in biological research applied to clinical practice (2000–5000 words)**

**Letters to the Editors (relating to a topic previously published in the journal) (500–1000 words)**

**Opinion articles: topical or controversial areas that do not warrant a full review (500–1000 words)**

**Review articles (2000–7000 words)**

**Protocol for solving a specific problem using different sets of programs (2000–5000 words)**
Contents

Papers
357  Zisland Explorer: detect genomic islands by combining homogeneity and heterogeneity properties
Wen Wei, Feng Gao, Meng-Zhe Du, Hong Li, Hui Weng and Feng-Biao Guo

367  MuSERA: Multiple Sample Enriched Region Assessment
Vahid Jalili, Matteo Matteucci, Marco J. Morelli and Marco Masseroli

382  A high-dimensional linkage analysis model for characterizing crossover interference
Jing Wang, Lidan Sun, Jun-Mei Ji, Hong-Ping Chang, Deyan Zhang and Rongling Wu

394  Detecting multi-way epistasis in family-based association studies
Cheikh Loucoubar, Audrey V. Grant, Jean-François Bureau, Isabelle Casademont, Michele Alice Bar, Valérie Bar-Hen, Momadou Jaja, Joseph Faye, Fatimahou Daene Sig, Abdoulaye Badane, Adama Tall, Jean-François Taylor, Freddy Clignet, Renée Schenkewitz, Mark Lochting, Richard Edward Paul and Adewale Adegunbiye

403  Ontology-based annotations and semantic relations in large-scale (epi)genomics data
Eugenia Galeota and Mattia Pelizzola

413  Impacts of somatic mutations on gene expression: an association perspective
Peilin Jia and Zhongming Zhao

426  Cell subpopulation deconvolution reveals breast cancer heterogeneity based on DNA methylation signature
Yanhu Wen, Yaqian Weng, Shuang Zhang, Song Li, Fanbo Ju, Feng Wang, Yue Zhou, Guangzheng Zhang and Yan Zhang

441  Features that define the best ChiP-seq peak calling algorithms
Stephen A. Smith and James B. Pease

451  Heterogeneous molecular processes among the causes of how sequence similarity scores can fail to recapitulate phylogeny
Zhao Lin, Alistair R. Oldham, Alexander F. Vanneste, Alexandre F. Vandeyken and Katherine S. Pollard

458  Template-based protein-protein docking exploiting pairwise interfacial residue restraints
Li C. Yue, João P.G.L.M. Rodrigues, Drena Dobbs, Vincent Hannover and Alexander M.J.J. Bax

Software Review
467  Novel in silico tools for designing peptide-based subunit vaccines and immunotherapeutics
Sandeep Kumar Dhanda, Salman Sadullah Usmani, Piyush Agrawal, Gandharva Nagpal, Ankur Gautam and Gajendra P.S. Raghava

Papers
479  Interdisciplinary approach towards a systems medicine toolbox using the example of inflammatory diseases
Christian R. Bauer, Carolin Knecht, Christoph Knecht, Christoph Fretter, Benjamin Baum, Sandra Jendrossek, Malte Rühlemann, Femke-Anouska Hossen, Nadine Umbach, Nadine Umbach, André Franke, Wolfgang Lieb, Michael Krawczak, Marc-Thorsten Hütt and Ulrich Sax

488  Literature-based discovery of new candidates for drug repurposing
Wang li, Xue, Yoon Hwang Ju, Yan-Ping Wang, Yoo Sunkuk and Sung-Moon Chang

Software Review
498  Analysis of metabolomic data: tools, current strategies and future challenges for omics data integration
Ali CMaghoub, Daisalraghi Perrone and Massimiliano Pirrung

Opinion Note
511  Tensor factorization toward precision medicine
Yuan Liu, Fei Wang and Peter Sanders

Papers
515  Optimization of cell lines as tumour models by integrating multi-omics data
Yan Xu, Yaqian Li, Houwen Wei, Shuangliang Ye, Gangzheng Zhang, Cheng Wu, Da Qing Chang and Yan Xu

530  A review of bioinformatic pipeline frameworks
Jeremy Wang

537  Development of a cloud-based Bioinformatics Training Platform
Jens Roeste, Nathan S. Watson-Hugh, Steve Quevrette, Blair Birthwaite, Annette McGlash and Catherine A. Shang

545  Corrigendum
