Contents

Papers

249  Progress in the genetics of ankylosing spondylitis
     Matthew A. Brown

258  New approaches to the representation and analysis of phenotype knowledge in human diseases and their animal models
     Paul N. Schofield, John P. Sundberg, Robert Hoehndorf and Georgios V. Gkoutos

266  Systems approaches to modelling pathways and networks
     Thomas Pfau, Nils Christian and Oliver Ebenhöh

280  Network-based methods for human disease gene prediction
     Xiujuan Wang, Natali Gulbahce and Haiyuan Yu

294  From ‘JUNK’ to Just Unexplored Noncoding Knowledge: the case of transcribed Alus
     Rajesh Pandey and Mitali Mukerji

312  The minimal genome—a metabolic and environmental comparison
     Michael Thomas DeWall and Davis W. Cheng

Short Communication

316  Non-coding RNAs: could they be the answer?
     Fabricio F. Costa
