Corrigenda

Bleomycin-induced chromosome breaks as a risk marker for lung cancer: a case-control study with population and hospital controls

by Yun-Ling Zheng, Christopher A. Loffredo, Zhipeng Yu, Raymond T. Jones, Mark J. Krasna, Anthony J. Alberg, Rex Yung, Donna Perlmutter, Lindsey Enewold, Curtis C. Harris and Peter G. Shields

Carcinogenesis, 24, 269–274, 2003

The authors omitted to include one of the participant hospitals in the Acknowledgements. They would like to apologize for this omission and have asked for the following statement to be published:

We thank the physicians and staff of Sinai Hospital, Baltimore, MD. We could not have done the study without their assistance.

Induction of DNA synthesis in primary mouse hepatocytes is associated with nuclear pro-transforming growth factor z and erbb-1 and is independent of c-jun

by Elisabeth Schausberger, Robert Eferl, Wolfram Parzefall, Monika Chabicovsky, Paul Breit, Erwin F. Wagner, Rolf Schulte-Hermann and Bettina Grasl-Kraupp

Carcinogenesis, 24, 835–841, 2003

Regrettably, the spelling of the author’s name Monika Chabicovsky was incorrect. The correct spelling is as it appears here.
